Vision and Mission of the Institute
National Institute of Technology Warangal

VISION
Towards a Global Knowledge Hub, striving continuously in pursuit of excellence in Education, Research, Entrepreneurship and Technological services to the society

MISSION
- Imparting total quality education to develop innovative, entrepreneurial and ethical future professionals fit for globally competitive environment.
- Allowing stake holders to share our reservoir of experience in education and knowledge for mutual enrichment in the field of technical education.
- Fostering product-oriented research for establishing a self-sustaining and wealth creating centre to serve the societal needs.

Vision and Mission of the Department
Biotechnology

VISION
To become a global centre of excellence for quality education, research, technological services and entrepreneurship in emerging areas of biotechnology.

MISSION
- Providing a quality education in pursuit of knowledge that establishes a strong foundation for understanding developments in the rapidly advancing field of biotechnology through research and instruction.
- Promoting scientific discovery and development in diversified fields of Biotechnology through a fusion between engineering and life sciences.
- Fostering relationships with institutes of higher learning and research, alumni and industries.

Program: B.Tech. Biotechnology

Program Educational Objectives

PEO-1	Apply academic knowledge and professional investigational skills in basic mathematics, life sciences, computational and other courses to find solutions for societal problems overlapping the biotechnology domain.
PEO-2	Implement biotechnology projects to enhance the standards of the society and environment.
PEO-3	Investigate the concerns related to food, energy, environment, biosafety and bioethics.
PEO-4	Exhibit exemplary soft skills, managerial and leadership skills.
PEO-5	Continue lifelong learning in the biotechnology domain for individual growth and also for the betterment of the society.

Program: B.Tech. Biotechnology

Program Outcomes

PO-1	**Engineering knowledge**: Apply the knowledge of mathematics, science, Engineering fundamentals and biotechnology to the solution of complex engineering problems.
PO-2	**Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
PO-3	**Design/Development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO-4	**Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO-5	**Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex biotechnology activities with an understanding of the limitations.
PO-6	**The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO-7	**Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO-8	**Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO-9	**Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO-10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-11	**Project management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-12	**Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes

PSO-1	Design solutions for real world biotechnological problems and analyze their complexities.
PSO-2	Develop interfaces among subsystems of biotechnology.
PSO-3	Analyze large biological data samples to solve biotechnological problems.

SYLLABI

B.Tech. Biotechnology

1st Semester

MA1161 **3-0-0 (3)**

Linear Algebra, Calculus and Ordinary Differential Equations

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand to solve the consistent system of linear equations
CO-2	Apply orthogonal transformations to a quadratic form
CO-3	Determine the series expansion of a given function
CO-4	Explore the properties of functions of several variables
CO-5	Solve arbitrary order linear differential equations

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3

CO-5	3	3	1	2	1	–	–	–	–	–	–	–	2	1	1

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Linear Algebra: Vector space, Subspace, Examples, Linear span, Linear independence and dependence, Basis, Dimension, Extension of a basis of a subspace, Intersection and sum of two subspace, Examples. Linear transformation, Kernel and Range of a linear map, Rank-Nullity Theorem (without proof). Rank of a matrix, Row, and column spaces, Solvability of the system of linear equations, Inner product spaces, Orthogonal basis, Gram-Schmidt orthogonalization process. Eigenvalues, Eigenvectors, and properties Caley-Hamilton Theorem (without proof) and applications, diagonalization of a matrix, diagonalization by similarity, and orthogonal transformations.

Differential Calculus: Taylor's theorem with remainders; Taylor's and Maclaurin's expansions; Functions of several variables – continuity, differentiability, partial derivatives, Euler's theorem, change of variables, Jacobians, Functional dependence; Maxima andminima of functions of several variables (2 and 3 variables) - Lagrange's method of multipliers.

Ordinary Differential Equations: First order differential equations - Basic definitions, Geometric interpretation of solutions of first-order ODE $y' = f(x, y)$, Exact differential equations, Integrating factors, Linear equation, Reducible to linear form: Bernoulli's equations; Orthogonal trajectories; Higher order linear differential equations with constant coefficients - Cauchy-Euler and Legendre's differential equations, Method of variation of parameters - System of linear differential equations; Applications to physical problems.

CY1161 **3-0-2 (4)**

Engineering Chemistry

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand the basic concepts of chemistry relevant to materials
CO-2	Apply electrochemical concepts for energy harvesting, conversion and storage
CO-3	Analyze the properties of materials for various applications
CO-4	Comprehend the concepts of instrumentation principles, Spectroscopy and procedures involved in characterization of materials
CO-5	To analyze the metal contents from the ores by understanding the redox process
CO-6	To determine the rate of corrosion by a redox reaction and understand the concept of adsorption

Course Articulation Matrix:

CO-6	3	3	3	–	2	2	–	–	–	1	–	–	1	–	–

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Chemical Kinetics and Thermodynamics: Order of a Reaction, Theories of Reaction Rates. Homogeneous and Heterogeneous Catalysis. Thermodynamic variables, Laws of Thermodynamics, Thermodynamic Relationships and Applications.

Electrochemistry and Energy Systems: Introduction to Electrochemistry, Nernst's law and its applications. Batteries, fuel cell and photo-electrochemical systems. Corrosion and its prevention.

Transition Metal Chemistry and Organometallic Chemistry: Bonding in transition metal complexes; Crystal field and MO Theories, Jahn-Teller effect. Properties of Coordination complexes; Metal Carbonyls, EAN and 18-electron rule, Ligands and hapticity; Type of reactions: Oxidative addition, Reductive elimination, Migratory insertion, Hydrogenation, Hydro formylation, Monsanto process and Wacker process.

Engineering Materials: Inorganic and Organic Semiconductors, Magnetic materials, Liquid crystals, Superconductors, Photo conducting Materials and conducting polymers.

Chromatographic and Spectroscopic Methods: Liquid Chromatographic and Gas Chromatographic methods. UV-VIS, spectroscopy, Infrared spectroscopy, NMR spectroscopy.

List of Experiments:

1. Standardization $KMnO_4$ solution.
2. Estimation of metal content in an ore.
3. Estimation of Calcium in milk powder by complexometry.
4. Extraction and identification of DNA from green peas/onions.
5. Estimation of iodine in iodized common salt.

6. Blue printing of an object by photochemical reaction.
7. Kinetics of acid hydrolysis of methyl acetate.
8. Determination of acid strength in citrus fruit.
9. Verification of Beer-Lambert Law and estimation of concentration of food color.
10. Evaluation of E^o values of $Zn|Zn^{2+}$ and $Cu|Cu^{2+}$ Electrodes and measure the emf by constructing the Daniel cell.
11. Estimation of phosphoric acid in soft drinks by pH metry.
12. Separation of natural pigments from mixture using paper chromatography.
13. Determination of efficiency of a corrosion inhibitor.
14. Verification of Freundlich adsorption isotherm.
15. Preparation of a polymer and its analysis.
16. Estimation of active pharmaceutical ingredient in a drug.

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

DC Circuits: Kirchhoff's Voltage and Current Laws, Superposition Theorem, Star-Delta Transformations. **AC Circuits:** Complex representation of Impedance, Phasor diagrams, Power & Power Factor, Solution of 1-Phase Series & Parallel Circuits.

Single Phase Transformers: Principle of Operation of a Single-Phase Transformer, EMF Equation, Phasor Diagram, Equivalent Circuit of a 1-Phase Transformer, Determination of Equivalent circuit parameters, calculation of Regulation & Efficiency of a Transformer.

DC Machines: Principle of Operation, Classification, EMF and Torque Equations, Characteristics of Generators and Motors. Speed Control Methods.

AC Machines: 3-Phase Induction Motor- Principle of Operation, Torque – Speed Characteristics of 3-Phase Induction Motor & Applications, Principle of Operation of Alternator- EMF equation.

Illumination: Terminology, Laws of illumination and Luminance, Luminaries, LED Lighting (Qualitative). **Electric Heating**: Principles of resistance heating, induction heating and dielectric heating. (Qualitative). **Electronic Devices & Circuits:** P-type and N-Type semiconductors, P-N junction diode and its I-V characteristics, Single-phase Half-wave and Full wave rectifiers. Bipolar Junction Transistor-operation and CE, CC & CB configurations, Static Characteristics of SCR-MOSFET- IGBT.

Sensors & Transducers: Thermocouple, Thermistor, Resistance Temperature Detector, Hall effect and Piezoelectric Transducers (Qualitative Treatment only)

Electrical Measuring Instruments: Moving Coil & Moving iron ammeters & voltmeters. Wattmeter's (Qualitative).

Electronics Measurements: Principle of Operation of Digital Multi Meter & Cathode Ray Oscilloscope.

Engineering Drawing

Pre-Requisites: **None**

Course Outcomes:

CO-1	Apply BIS standards and conventions while drawing Lines, printing Letters and showing Dimensions
CO-2	Classify the systems of projection with respect to the observer, object and the reference planes
CO-3	Construct orthographic views of an object when its position with respect to the reference planes is defined
CO-4	Analyze the internal details of an object through sectional views
CO-5	Develop 3D Isometric View from 2D orthographic views

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Introduction: Drawing instruments and their uses, Types of lines, Lettering, General rules for dimensioning, Geometrical constructions using instruments. **(Conventional)**

Orthographic Projection: Methods of projection, Principles of Orthographic projection, First angle versus third angle of projection, Six views of an object, Conventions. **(Conventional)**

Projection of Points: Projections of points when they are situated in different quadrants. **(Conventional)**

Projections of Lines: Projections of a line parallel to one of the reference planes and inclined to the other, line inclined to both the reference planes, Traces. **(Conventional)**

Fundamentals of AutoCAD: Introduction to Auto-CAD, DRAW tools, MODIFY tools, TEXT, DIMENSION, PROPERTIES. **(AutoCAD)**

Projections of Planes: Projections of a plane perpendicular to one of the reference planes and inclined to the other, Oblique planes. **(AutoCAD)**

Projections of Solids: Projections of solids whose axis is parallel to one of the reference planes and inclined to the other, axis inclined to both the planes. **(AutoCAD)**

Section of Solids: Sectional planes, Sectional views - Prism, pyramid, cylinder and cone, true shape of the section. **(AutoCAD)**

Isometric Views: Isometric axes, Isometric lines, Isometric Planes, Isometric scale, Isometric Views, Isometric projections. **(AutoCAD)**

Syllabus:

Introduction to Engineering: “Engineering” as a vehicle for social and economic development; impact of science/engineering our day to day lives; process of engineering a product; various career options.

Introduction and identifying the need: Understanding the unique needs of the user - empathize - define - ideate - prototype - test. Case Studies - Develop appreciation for the design process and its application in specific settings (Guest lectures, Videos, Field visits, Interplay lectures of design-based movies).

Problem Formulation: Framing a problem statement neutrally using adequate checks. Case studies.

Concept Generation: Generate multiple concepts using various creativity tools and thinking styles.

Prototyping: Select from ideas and make quick prototypes (mock-ups) using available material.

Evaluation: Iterative process of ideation, prototyping and testing-Take the mock-ups to users for feedback and iterate process till users feel delighted.

Activities:

Some of the activities which are undertaken as a part of this course include:

- Field Visits
- Case Studies on innovation, failures etc.
- Guest lecture
- Group Discussions
- Presentation by student
- Experiential learning workshops

Syllabus:

List of Laboratory Experiments:

1. Electrical verification of Kirchhoff's voltage and current laws.
2. Verification of superposition theorem.
3. Calculation of the power factor and power in a Single phase series *RL* circuit.
4. No load test on a DC machine.
5. Load test on a DC shunt generator.
6. Speed control of a DC shunt motor.
7. Determination of equivalent circuit parameters of a single phase transformer.
8. Determination of efficiency and regulation of a single phase transformer.
9. Direct load test on a single phase transformer.
10. Direct Load test on a three phase induction motor.
11. Static Characteristics of Transistors.
12. Half wave and Full-Wave Rectifiers With R-Load.
13. Static Characteristics of MOSFET.

Integral and Vector Calculus, Laplace and Fourier Transforms

Pre-Requisites: MA1161

Course Outcomes:

CO-1	Analyze improper integrals for extracting certain properties of beta and gamma integrals
CO-2	Evaluate multiple integrals in different coordinate systems
CO-3	Apply the concepts of gradient, divergence and curl of scalar and vector point functions to formulate engineering problems
CO-4	Convert line integrals into area integrals and surface integrals into volume integrals
CO-5	Apply Laplace transforms to solve physical problems arising in engineering

1 - Slightly; 2 - Moderately; 3 - Substantially

Syllabus:

Integral Calculus: Improper integrals; Beta and Gamma functions, and their properties; Differentiation under integral sign, Evaluation of double and triple integrals; Areas and Volumes, Change of order of integration; Change of variables in double and triple integrals.

Vector Calculus: Scalar and vector fields; Vector differentiation; Level surfaces; Directional derivative; Gradient of a scalar field; Divergence and curl of a vector field; Laplacian operator; Parametrization of curves and surfaces; Line, surface and volume integrals; Green's theorem in a plane; Stoke's theorem; Gauss divergence theorem.

Laplace Transforms: Laplace transforms; Inverse Laplace transforms; Properties of Laplace transforms; Laplace transforms of unit step, impulse and periodic functions; Convolution theorem; Applications of Laplace transforms - solving certain initial value problems - solving system of linear differential equations - finding responses of systems to various inputs viz. sinusoidal inputs acting over a time interval, rectangular waves, impulses.

Fourier Transforms: Fourier transformation and inverse transforms – sine, cosine transformations and inverse transforms.

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Interference: Principle of Superposition, Coherence and Coherent Sources, Production of Coherent Light, Young's Double Slit Experiment, Concept of interference, Newton's Rings, working of Michelson Interferometer, Fabry-Perot Interferometer, and its application as wavelength filter.

Diffraction: Definition and types of Diffractions, Huygen's Principle and types of wave fronts, types of Diffraction, Single Slit Diffraction, Double Slit Diffraction, Diffraction Grating, Derivation of Resolving Power and Dispersive Power, Rayleigh's Criterion and applications.

Polarization: Introduction to Polarization, Production of Polarized Light by Reflection and Refraction, Phenomenon of Double Refraction, Construction and Working of Nicol's Prism, Half-Wave and Quarter Waveplates, Representation of Different Polarized Lights, Optical Activity, Practical Applications of Polarized Light, Construction and Working of Laurent's Half Shade Polarimeter and Engineering Applications.

Lasers & Optical Fibers: Basic theory of Laser, Fundamentals of lasers, Einstein Coefficients, Characteristics of Laser Pumping Mechanisms; Basic Components of Laser System, 2-Level, 3-Level and 4-Level Systems, Construction and working of He-Ne, Nd-YAG, and semiconductor diode Lasers and Engineering Applications of Lasers. Basic Principle of Optical Fiber, Derivation-Numerical Aperture and Acceptance Angle, Types of Optical Fibers (Step and Graded Index, Single Mode and Multimode), Applications in Communications and Sensors.

Quantum Mechanics: Concepts and experiments that led to the discovery of Quantum Nature, de Broglie hypothesis of matter waves, Heisenberg uncertainty principle, Schrodinger time independent and time dependent wave equations, the free particle problem, Particle in an infinite and finite potential well, Quantum mechanical tunnelling and applications.

Nanomaterials: Introduction and importance of Nanomaterials, classification (0D, 1D, 2D and 3D) of nanomaterials, properties of nanomaterials, carbon-based nanomaterials, synthesis of nanomaterials, top-down and bottom-up approaches, characterization of nanomaterials, Engineering Applications of Nanomaterials.

Ultrasonics: Production, detection, and applications of ultrasonics.

List of Experiments:

1. Determination of Wavelength of Sodium light using Newton's Rings.
2. Determination of Wavelength of He-Ne laser - Metal Scale.
3. Measurement of Width of a narrow slit using He- Ne Laser.
4. Determination of Specific rotation of Cane sugar by Laurent Half-shade Polarimeter.
5. Determination of Numerical aperture, loss, Acceptance angle of optical fiber.
6. Determination of plank constant by photo electric effect.
7. Determination of I – V characteristics of photo diode.
8. Diffraction grating by normal incidence method.
9. Determination of capacitance by using R-C circuit.
10. Determination of resonating frequency and bandwidth by LCR circuit.
11. Strain Gauge.
12. Dielectric constant measurements.
13. Determination of carrier concentration, charge by using Hall effect experiment.
14. Study of I-V characteristics of Solar Cell.
15. Determination of velocity of ultrasonic waves and adiabatic compressibility of liquids using ultrasonic interferometer.

Programming and Data Structures

Pre-Requisites: **None**

Course Outcomes:

CO-1	Design algorithms for solving simple mathematical problems including computing, searching and sorting
CO-2	Compare and contrast algorithms in terms of space and time complexity to solve simple mathematical problems
CO-3	Explore the internals of computing systems to suitably develop efficient algorithms
CO-4	Examine the suitability of data types and structures to solve specific problems
CO-5	Apply control structures to develop modular programs to solve mathematical problems
CO-6	Understand the concept of Abstract Data Types and use in real time applications

Syllabus:

Fundamentals of Computers: Components of a computers, Problems, Flowcharts, Memory, Variables, Values, Instructions, Programs.

Problem solving techniques: Algorithmic approach, characteristics of algorithm, Problem solving strategies: Top-down approach, Bottom-up approach, Number systems and data representation.

Elements of C++ programming language: Data types, constants, and variables, expressions and assignment statements, input and output statements, conditional and branch statements: If-else, Switch-case constructs, iteration statements: while, do-while, for, Arrays – Single and Multi-Dimensional Arrays, strings. Bit-wise operations.

Functions and Recursion: Modular approach for solving real time problems, user defined functions, library functions, parameter passing - call by value, call by reference, return values, passing arrays as parameters to functions Recursion.

Structures and Classes: Declaration, member variables, member functions, access modifiers, function overloading, Problems on Complex numbers, Date, Time, Large Numbers.

Pointers and Files: Introduction to pointers and dynamic allocation, String processing, File operations-create, read and write.

Searching and sorting: Linear and binary search, selection sort, bubble sort, insertion sort, merge sort, quick sort.

Data structures: Abstract Data Types (ADTs) - Stack ADT- Array-Based Implementation of Stack - Applications, Queue ADT - Array-Based Implementation – Applications.

English for Technical Communication

Pre-Requisites: English proficiency above B1 level as per the CEFR (Common European Framework of Reference) for languages

Course Outcomes:

CO-1	Understand and apply principles of technical communication to interact effectively in diverse environments
CO-2	Analyze complex technical documents to extract and synthesize key information
CO-3	Employ reported speech, active and passive voice in engineering and scientific contexts to compile technical reports
CO-4	Demonstrate use of English speech sounds, stress, and intonation in day-to-day situations, conversations, and interactions
CO-5	Interpret technical data presented in the form of graphs, pie charts, and diagrams
CO-6	Critique and provide constructive feedback on peer communication performances and written works

1 - Slightly; 2 - Moderately; 3 - Substantially

Syllabus:

Grammar Principles & Effective Sentence Construction: Correction of Sentences and Concord, - Vocabulary Building, - Synonyms and Antonyms, - Idioms and Phrasal Verbs: Patterns of Use and Suggestions for Effective Employment in Varied Contexts, - Technical Vocabulary (Jargons and Registers),- Strategies for Bringing Variety and Clarity in Sentences, - Removing Ambiguity, - Editing Long Sentences for Brevity and Clarity, - Reported Speech, - Contexts for Use of Reported Speech, - Impact on Audiences and Readers, - Active and Passive Voice, - Reasons for Preference for Passive Voice in Scientific English

Reading Techniques: Definition and Importance, - Skills and Sub-Skills of Reading, - Skimming and Scanning: Uses and Purposes, Examples and Exercises, - Reading Comprehension, - Reading Silently and with Understanding, - Process of Comprehension, - Types of Comprehension Questions

Writing- Paragraph & Letter: Definition of Paragraph and Types, - Features of a Good Paragraph, - Unity of Theme, - Coherence, - Linking Devices, - Direction, - Patterns of Development. - Importance in the Context of Other Channels of Communication, - Qualities of Effective Letters, - Types of Letters, - Official Letters, - Letters for Various Purposes, - Letters of Application for Jobs, - Cover Letter and Resume Types, - Letters for Internship/Fellowship, - Writing Statements of Purpose (SOPs), - Examples and Exercises

Mechanics of Writing: Principles of a Technical Report, - Know Your Audience, Purpose, and Length of Report, - Understand the Cornerstones of a Presentation, - Define Various Purposes of Presentations and Plan the Correct Structure, - Writing Clear Sentences and Paragraphs, - Removing Jargon,

Redundancy, and Wordiness, - Kinds of Graphics and Their Messages, - Suitability for Placement in Graphic Representation.

Reviews: Oral and Written Review of a Chosen Novel/Play/Movie, - Review of Scientific Articles and Science Fiction, - Focus on Appropriate Vocabulary and Structure, - Use of Special Vocabulary and Idioms

Language laboratory:

1. **English Sound System** -vowels, consonants, Diphthongs, phonetic symbols- using dictionary to decode phonetic transcription- Received Pronunciation, its value and relevance- transcription.
2. **Stress and Intonation** –word and sentence stress - their role and importance in spoken English- Intonation in spoken English -definition, -use of intonation in daily life-exercises.
3. **Introducing oneself in formal and social contexts**- Role plays. - their uses in developing fluency and communication in general.
4. **Oral presentation** - definition- occasions- structure- qualities of a good presentation with emphasis on body language and use of visual aids.
5. **Listening Comprehension**- Challenges in listening, good listening traits, some standard listening tests- practice and exercises.
6. **Debate/ Group Discussions**-concepts, types, Do's and don'ts- intensive practice, Guided writing practice with examples, drafting – the mindset to avoid writer's block, Checking your own reports and presentations, Giving and receiving constructive feedback.

Bioprocess Calculations

Pre-Requisites: **MA1161**

Course Outcomes:

CO-1	Understand the material and energy balances of bioprocesses
CO-2	Perform material and energy balances on biochemical processes/equipment without and with reactions
CO-3	Perform unsteady state material and energy balances
CO-4	Draw the flow diagram and solve the problems involving recycle, purge and bypass in a process or unit
CO-5	Calculate balances on reactive processes

Course Articulation Matrix:

CO-5	3	–	3	2	–	–	1	–	1	2	–	–	3	3	–

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Introduction: Drawing steady-state material balances, general material balance equations; procedure for material balance calculations; material balances involving multiple sub-systems; simplifications for steady state processes without chemical reaction; material balance problems with chemical reactions.

Material Balance for Various Unit Operations: Concept of limiting; excess reactants; fractional conversion; percentage of conversion; percentage yield; excess air calculations; material balances involving simultaneous equations; material balances involving recycle; by-pass; and purge streams; stoichiometry of microbial growth and product formation, problems involving recycle and purge streams.

Steady-State Energy Balances: General energy balance equations; enthalpy calculation procedures; enthalpy change in non-reactive processes; steam tables; procedure for energy balance calculations without reaction; energy balance worked examples without reaction; enthalpy change due to reaction. Solving simultaneous material and energy balances, heat of reaction for processes with biomass production; energy balance equation for cell culture; fermentation energy balances worked examples.

Unsteady-State Material and Energy Balances: Unsteady-state material and energy balance equations; solving differential equations; unsteady-state mass balances; unsteady-state energy balances; unsteady-state material and energy balances on non-reactive process; heat of mixing and solution; balances on reactive processes; integrated balances.

Cell Biology

Pre-Requisites: **BT1205, BT1207**

Course Outcomes:

CO-1	Understand the cell theory and cellular compartmentalization
CO-2	Distinguish the structure and function of the cell organelles and membrane
CO-3	Compare and contrast the events of cell cycle and its regulation
CO-4	Summarize the definition, sources and applications of stem cells
CO-5	Relate the importance of cell cycle on cancer development

1 - Slightly; 2 - Moderately; 3 - Substantially

Syllabus:

Genes in action: DNA, Genes and chromosomes, chromatin structure, DNA Replication-mechanism, topological constraints, end replication problem, DNA mutation and repair, homologous recombination, transposons.

Genes to proteins: Transcription- mechanism and regulation, transcription factors, splicing and RNA processing, genetic code, role of tRNA and ribosomes in translation, control, and regulation of translation, post translational modifications, regulation of gene expression.

Mendelism and Chromosomal theory: Principles of inheritance, deviation from mendelism, Linkage, Recombination and Gene Mapping Methods, Sex linkage, pedigree analysis. Mutation and Extra Chromosomal Inheritance**.** Change in chromosome number and structure, maternal inheritance.

Human Molecular Genetics and Evolutionary Genetics: Genetic disorders, human gene therapy; DNA profiling. Allele frequency, natural selection, random genetic drift, genetic variation in natural population, molecular evolution, speciation.

Plant Molecular genetics: Life cycle in plants, Techniques of plant transformation, defense response to stresses in plants.

Syllabus:

1. Creation of student database.
2. Database consist of roll number, name, subject code, marks etc.,
3. Finding out the total and average marks, result for each student table.
4. Record Manipulations such as Deletion, Modification, Addition and counting the record.
5. Programs to perform arithmetic calculations in python.
6. Creating table that demonstrates simple biological applications.
7. Creating table to demonstrate applications with biological sequences.
8. Program to find the length of the given sequence.
9. Program to reverse and concatenation of the given sequence.
10. Program to complement and reverse complement of DNA sequence.
11. Program to calculate GC content in the given DNA sequence.
12. Program to translate DNA into Protein Sequence.

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Introduction: The evolution of management theory, Business functions and their roles, Organizations and types, Levels of management, Types of markets and pillars of management- planning, organizing, leading and controlling.

People Management: Catalysts for organizational performance – Motivation & Leadership, Organization culture & Change, Human resource functions in a dynamic business environment and evolving dynamics in Industrial Relations.

Marketing Management: Nature and scope of marketing, Company's orientation towards market place, Importance of marketing concept, Marketing environment, 4p's of marketing, market segmentation, target market selection and positioning.

Financial Management: Financial accounting, Financial statements and analysis for decisions, Financial planning, Capital, Working capital, Capital structure and Sources of corporate finance, Investment decisions.

Project Management: Project screening and Selection, Techniques, Structuring concepts and Tools (WBS, OBS, and LRC, RACE). Project life cycle analysis. Appraisal of a project, Project Planning: Techniques, CPM, PERT- GAN - Time Cost Trade-off and Crashing Procedure, Project Monitoring: Monitoring Techniques and time control System, EVA Analysis

Quality & Strategy: Quality, Principles, Quality Awards, Standards of Quality culture, Quality metrics programs, Strategy, Vision and Mission, Porter's 5–forces, McKinsey's 7S Model, BCG Matrix, Competitive advantage - Value chain analysis & Resource based view.

1 - Slightly; 2 - Moderately; 3 - Substantially

Syllabus:

Introduction to Bioprocessing: Role of a bioprocess engineer, kinetics of microbial growth, substrate utilization, and product formation; Batch and continuous culture.

Sterilization: Media sterilization; kinetics of thermal death of cells & spores, design of batch and continuous thermal sterilization, sterilization of air and filter design, radiation and chemical sterilization.

Biofluid mechanics: Newtonian and non-Newtonian fluids, factors affecting broth viscosity, velocity distribution in laminar flow and turbulent flow, aeration and agitation, power requirement for gassed and un-gassed systems, Rate of mixing.

Bioprocess Heat Transfer: Modes of heat transfer, Steady-state and un-steady-state heat transfer, Heat transfer coefficients, Boiling and condensation heat transfer, Heat transfer equipment, Evaporation.

Mass Transfer in Bioreactors: Theories of mass transfer, Gas-Liquid mass transfer, Measurement of K_La, Oxygen transfer methodology, Maximum cell concentration.

Applications of bioreactors: On-line and off-line measurement in bioreactors, Various types of microbial and enzyme reactors.

Fractal Course I

Pre-Requisites: **None**

Course Outcomes:

CO-1	Acquire an in-depth understanding of the specific topic covered in the course, which could range from a particular technology, method, or recent advancement in Biotechnology
CO-2	Develop hands-on skills relevant to the course topic, such as using specific tools, software, or techniques
CO-3	Apply learned concepts to solve focused and practical engineering problems related to the course content
CO-4	Understand the interdisciplinary aspects and applications of the course to solve real-world industrial problems.

Course Articulation Matrix:

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

This one-week course aims to bridge the gap between academic learning and industry application / latest research developments, providing students with a comprehensive understanding of the Biotechnology field and enhancing their readiness for professional careers.

a. **Structure:** Lectures delivered by an expert from the Biotechnology Industry / R&D Organization / Academic Institution (SPARC Collaborators / Foreign Subject Experts in GIAN program / Adjunct Professors from Foreign Universities @ NITW).

b. **Content:** Topics covering current practices, case studies, technological advancements, and future trends.

c. **Interactive Sessions:** Q&A sessions, discussions, and case study analyses to foster interaction between students and the subject expert.

d. **Assessment:** the mode of assessment (Participation, a short reflective report / a presentation summarizing key takeaways from the lectures / Objective or descriptive type exam, etc.) will be decided by the subject expert.

Learning Resources:

1. Course material and any learning resources suggested by the experts

Genetic Engineering and Immunology Lab

Pre-Requisites: **BT1211, BT1212**

Course Outcomes:

CO-1	Demonstrate basic safe laboratory practices and set up laboratory equipment safely
CO-2	Manipulate nucleic acids employing basic laboratory techniques and use standard procedures to clone them
CO-3	Plan the gene manipulation procedures and interpret the experimental results
CO-4	Analyze antigen-antibody interactions and interpret the results
CO-5	Perform different immunoassays that are used in clinical diagnostics
CO-6	Design assays for immunological research

Bioprocess and Bioreaction Engineering Lab

Pre-Requisites: BT1211, BT1212

Course Outcomes:

CO-1	Estimate specific growth rate using microbial growth curve
CO-2	Estimate Michaelis–Menten constants
CO-3	Find the effect of pH and temperature on enzyme activity
CO-4	Estimate the Monod parameters in batch, fed-batch and continuous cultures

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3

Downstream Processing

Pre-Requisites: **BT1203, BT1207**

Course Outcomes:

CO-1	Understand the principles of downstream processing in biotechnology and pharmaceutical industries
CO-2	Evaluate different techniques used for cell disruption and extraction of intracellular components
CO-3	Develop proficiency in various downstream processing techniques such as chromatography
CO-4	Analyze the importance of downstream processing in the purification of biopharmaceuticals
CO-5	Design downstream processing strategies for specific biopharmaceutical products, considering factors such as yield, purity, and cost-effectiveness

Course Articulation Matrix:

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Introduction to biomolecules and properties of biological materials: Downstream Processing Principles economics and issues. Importance of downstream in industrial processes – examples.

Size reduction and Cell disruption methods: Recovery of intracellular products, cell disruption equipment.

Isolation of insoluble: Filtration, Sedimentation, Coagulation, and flocculation Centrifugation.

Product recovery: Membrane separation processes: Dialysis, Reverse osmosis, electrodialysis, pervaporation, Extraction methods: Solid-liquid and Liquid -Liquid extraction methods.

Product enrichment: Chromatographic separation and electrophoresis methods: Principles of chromatographic separation methods, different types of chromatographic methods, ion – exchange chromatography, gel chromatography, affinity chromatography. Principles of electrophoresis and electrophoresis mobility, applications. Distillation.

Product polishing and finishing: Crystallization, Drying, Lyophilization and Product stabilization.

List of Experiments: Extraction of Intracellular Proteins by cell disruption methods, Centrifugation methods, Precipitation methods, Dialysis, Lyophilization, Ion exchange chromatography, Gel filtration chromatography, Affinity chromatography, Tangential filtration methods, NATIVE electrophoresis, Storage methods for isolated products.

CO-5	–	3	3	1	2	2	3	1	1	3	–	–	2	1	–

1 - Slightly; 2 - Moderately; 3 - Substantially

Syllabus:

Instrumentation and Control Basic Concepts, Examples: Bioprocess instrumentation, temperature, pH, level, flow, pressure, DO sensors; Response of first order systems, transfer function, transient response, forcing functions and responses; physical examples of first and second order systems, linearization, transportation lag.

Control systems: Components of a control system, block diagram, development of block diagram, controllers and final control elements, closed loop transfer functions, standard block diagram symbols, transfer functions for single loop systems and multi loop systems.

Transient Response and Controllers: Transient response of simple control systems, servo problem, regulatory problem, Types of controllers: proportional, integral, derivative, PI, PD, PID controllers. Tuning of controllers, Systems Stability, Routh test for stability, root locus.

Introduction to Frequency Response: Substitution rule, bode diagrams, control system design based on frequency response, Bode and Nyquist stability criterion, gain and phase margins.

Control and Regulation in Biological Systems: Drug delivery applications, Cardiac Output regulation, Feedback and feedforward control in biological networks, Natural control and regulation in biological systems

Product Development

Pre-Requisites: **BT1101, BT1161**

Course Outcomes:

CO-1	Express Product Design Ideas using 2D or 3D sketches
CO-2	Model the components with geometric (engineering) specifications and appropriate materials
CO-3	Develop a prototype of the product
CO-4	Evaluate the entire product and the product based on testing with user
CO-5	Explore the scope for protecting novelty of the product through patent

Course Articulation Matrix:

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Design Thinking process for Product Development: Review of five step design thinking process of Empathize- Define- Ideate- Prototype- Test.

Project Selection: Identification of the problem through empathy, formulate and ideate to solve the problem.

Introduction: Biotechnology Product and Technology Sectors, Product Development time frame, Biotechnology Product development ideas. Experimental Paths: Basic Research Versus Translational Research. Regulatory Approval and Compliances for Biotechnology Products.

Product Development:

1. Identifying a product of interest and cloning the gene into a suitable vector or Identification of a natural producer of any secondary metabolite.
2. Design and optimization of fermentation process of host cells.
3. Harvesting of fermentation broth/cells through centrifugation and filtration.
4. Isolation of intracellular products by mechanical/enzymatic methods.
5. Precipitation/extraction of the product.
6. Removal of impurities by dialysis or tangential flow filtration.
7. High throughput purification of product by chromatography.
8. Concentration and formulation of the product.
9. Quality Control: testing, monitoring, and regulatory compliance of the product.

Iterative improvement of the product and Report writing: Development of assemblies/mock-up models/ working models/ prototypes/functional models/products, Testing and design review, Report writing.

IPR: Different forms of innovations emanating from the human mind and their protection using different tools of IPR, Basic introduction to Patents, Trademarks, Copyright, Industrial Designs Registrations, Geographical Indications Trade Secrets. Filing of IPR, implications, Ethics and societal implications of Intellectual Property Rights.

Fractal Course II

Pre-Requisites: **None**

Course Outcomes:

CO-1	Acquire an in-depth understanding of the specific topic covered in the course, which could range from a particular technology, method, or recent advancement in Biotechnology
CO-2	Develop hands-on skills relevant to the course topic, such as using specific tools, software, or techniques
CO-3	Apply learned concepts to solve focused and practical engineering problems related to the course content
CO-4	Understand the interdisciplinary aspects and applications of the course to solve real-world industrial problems

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2	PSO-3

CO-4	–	–	–	–	–	–	–	–	1	3	–	2	2	2	2

1 - Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

This one-week course aims to bridge the gap between academic learning and industry application / latest research developments, providing students with a comprehensive understanding of the Biotechnology field and enhancing their readiness for professional careers.

a. **Structure:** Lectures delivered by an expert from the Biotechnology Industry / R&D Organization / Academic Institution (SPARC Collaborators / Foreign Subject Experts in GIAN program / Adjunct Professors from Foreign Universities @ NITW).

b. **Content:** Topics covering current practices, case studies, technological advancements, and future trends.

c. **Interactive Sessions:** Q&A sessions, discussions, and case study analyses to foster interaction between students and the subject expert.

d. **Assessment:** the mode of assessment (Participation, a short reflective report / a presentation summarizing key takeaways from the lectures / Objective or descriptive type exam, etc.) will be decided by the subject expert.

Learning Resources:

1. Course material and any learning resources suggested by the experts

Description:

In Seminar and Technical Writing, every student is expected to prepare a well-organized report based on one / all of the following:

- by attending at least 5 expert lectures/ invited talks/ Seminar/ Popular lectures etc. organized by the institute/any of the departments, ideally in a specific domain or with the same theme.
- prepare a business or marketing plan based on patent search

The student is expected to consolidate the ideas from these lectures/patent searches and may even include material from other sources to strengthen the content of the report. The student should prepare a well-organized report based on the above and present it to the panel constituted by the department, for evaluation.

Evaluation Criteria:

The student will be evaluated by the panel based on the below criteria.

Criteria	Description	Weightages
I	Clarity on the topic	15 marks
II	List of lectures attended	15 marks
III	Report	15 marks
IV	Presentation	30 marks
V	Response to questions	25 marks

Short Term Industrial / EPICS / Research Experience

Pre-Requisites: **None**

Course Outcomes:

CO-1	Apply engineering principles to real-world problems, gaining practical experience
CO-2	Plan, manage and execute the work with ethical consideration
CO-3	Review the social and environmental impact of the work
CO-4	Communicate the learnings through report and presentation

Description:

Every student has to undergo either a Summer Internship / EPICS / Research project. The summer internship may be undergone in an Industry/Research organization or any premier academic Institution, including NIT Warangal for 6-8 weeks. The EPICS/research project shall be registered under the guidance of any faculty member in the institute. The student is required to submit a report and present the work before an evaluation committee, nominated by the Head of the Department.

Evaluation Criteria:

The student will be evaluated by the panel based on the below criteria. Weightage for each criterion will be determined by the panel and will be informed to the students.

Criteria	Description	Weightages
I	Relevance of the area of work	25 marks
II	Performance of the Task	20 marks

Syllabus:

Introduction to Industrial Bioprocess: Biotechnology: Scope and importance, Commercial potential of Biotechnology in India. Historical overview of industrial fermentation process -traditional and modern Biotechnology. Industrial Fermentation- microorganisms, mode of operation, fermentation processes- pictorial representation.

Production of Primary Metabolites: A brief outline of processes for the production of some commercially important organic acids (citric acid, lactic acid & acetic acid); amino acids (glutamic acid & tryptophan) and alcohols (ethanol & butanol)

Production of Secondary Metabolites: Production processes for various classes of secondary metabolites: antibiotics: (penicillin streptomycin & erythromycin), vitamins (Vit B12 and Vit B2) and steroid biotransformation.

Production of Enzymes and Other Bioproducts: Production of industrial enzymes (proteases & amylases), Production of biopesticide, Biofertilizers, bio-preservative (Nisin), biopolymers (xanthan gum & PHB), cheese, SCP.

Production of Modern Biotechnology Products: Production of recombinant proteins having therapeutic and diagnostic applications (insulin, human growth hormone), Production of recombinant vaccines (Hepatitis B vaccine, cholera vaccine), production of monoclonal antibodies.

Syllabus:

Introduction: Biodiversity: Definition, levels, organization, uses, and valuing biodiversity; Genetic Diversity: Nature and origin of genetic variation, measuring genetic diversity; Species Diversity: Concept of species, measurement of species diversity, global distribution of species riches. Ecosystem diversity: Terrestrial and aquatic ecosystems. Center of mega diversity and biodiversity hotspots; Biodiversity vs. Biotechnology.

Genetic resources and importance of Biodiversity: Plant Genetic Resources, Agrobiodiversity, Centre of Origin of Agrobiodiversity; Animal Genetic Resources, Germplasm Characterization and Evaluation; Convention of Biological Diversity.

Biodiversity loss & conservation: Direct drivers of biodiversity loss, Consequences of Biodiversity Loss, Extinction of Species; Biodiversity Conservation: *Ex-situ* and *In-situ* conservation of biodiversity, Role of Traditional Knowledge in Biodiversity Conservation, Threats to biodiversity: Habitat loss, poaching of wildlife, man-life conflicts.

Conservation Organizations and their activities: Brief account of the Conservation Organizations and their activities-CI, WWF, UNEP, FAO, IUCN. International Agreements on Biodiversity Conservation-CBD, CITES, IPCC, UNFCC, RAMSAR; National Instruments to Conserve Biological Diversity, National Biodiversity Act 2002, National Green Tribunal Act (2010); Biodiversity and Interface with IPR, Principles of Biodiversity Governance, Biodiversity and Human Happiness.

Syllabus:

Introduction to python, python features, writing python program, values and variables. Files Handling: Exception handling, try, except statement, functions; built-in functions, commonly used modules. Strings; creating and storing strings, the string function, basic string operations, string comparison, concatenation split, join, slice, formatting strings. Files, creating and opening text files, reading and writing data and csv file concepts.

Matrices; Creating a matrix, Naming rows and columns, Subset a matrix, unit matrix, cross matrix, Computing covariance and correlation matrix, Data frames, Creating a data frame, filtering data, Setting values, Setting values as a list, Setting values as a matrix factors, useful functions for data frames. Arrays, array indexing, subsections of an array, the array function, mixed vector and array arithmetic generalized transpose of an array, matrix facilities, matrix multiplication, linear equations and inversion.

File handling, Reading and writing text-format data in a file, importing data, importing data using built-in functions, importing data using the readr package, Reading and writing Excel/CSV worksheets, Reading and writing native data files, Reading and writing a single object in native format, Saving and restoring the working environment Loading built-in datasets.

Visualizing data; Creating scatter plots, Customizing chart elements, Plotting lines in multiple periods, Plotting lines with points, Plotting a multi-series, Creating bar charts, pie charts, histogram and density plots, box plots. Pandas, Numpy, Dask, Matplotlib, Pandas-profiling, Scikit-learn, PyTorch, OpenCV, SQLAlchemy, Dask

General introduction: Nomenclature and Classification of enzymes, Types of specificity, Active sites. Enzyme activity—chemical nature of enzymes. Protein nature of enzymes and nonprotein enzymes—ribozymes and DNAzymes. Coenzymes and Cofactors—prosthetic group, coenzymes involved in different metabolic pathways.

Enzyme-substrate interaction: Lock and Key mechanism, Induced Fit mechanism, transition state Hypotheses, Enzyme function, and general mechanism. Mechanism of enzyme catalysis: Acid-base catalysis, covalent catalysis, Metal ion catalysis, Proximity and orientation effects, etc. Mechanism of Serine proteases: Chymotryspin, Lysozyme, Carboxypeptidase A and Ribonuclease, and Proenzymes (Zymogens).

Kinetics of free enzymes: Basic concepts of bioenergetics, Factors affecting the rates of chemical reactions, Enzyme Kinetics: Michaelis-Menten Equation, Measurement of Km and Vmax, Enzyme inhibition: Reversible (competitive, uncompetitive and mixed) and irreversible, Kinetics of multi-substrate reaction: Sequential reactions and ping-pong reactions. Multienzyme complex and multifunctional enzymes, Kinetics of allosteric enzymes and enzyme regulation.

Immobilized enzymes: Principles & techniques of immobilization, Immobilized enzyme reactions; Analysis of mass transfer effects on kinetics of immobilized enzyme reactions, Analysis of film and Pore diffusion effects on kinetics of immobilized enzyme reactions, Calculation of effectiveness factors of immobilized enzyme systems.

Production and Application of Enzymes: Sources of industrial enzymes (natural and recombinant), Strategies of isolation and purification of new enzymes from different sources, downstream processing, Applications of enzymes in the food industry, detergents, energy, waste treatment, pharmaceutical, medical, and analytical purposes.

Unit Operations in Biotechnology

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand various unit operations involved in bioprocess industry
CO-2	Describe fluid flow operation and its measurement
CO-3	Identify heat transfer equipment for bioprocessing
CO-4	Comprehend the unit operation equipment involved in bioseparations
CO-5	Relate appropriate unit operation techniques in bioprocessing

Course Articulation Matrix:

1- Slightly; **2 - Moderately;** **3 - Substantially**

Syllabus:

Momentum Transfer-I: Mechanism of Momentum Transport: Newton's Law of Viscosity, Non-Newtonian fluids, theory of viscosity of liquids, time dependent viscosity, rheological properties of fermentation broth, factors affecting broth viscosity (cell concentration, cell morphology, osmotic pressure, product and substrate concentration), Velocity distribution in laminar flow and turbulent flow.

Momentum Transfer-II: Equation of change for isothermal system (equation of continuity, equation of motion), interphase transport in isothermal systems (friction factors for flow in tubes and in packed columns) mixing, mixing mechanism, power requirements in un-gassed Newtonian and Non-Newtonian fluids, gassed fluids, interaction between cell and turbulent Eddies, operating conditions for turbulent shear damage. Macroscopic Balances-mass, momentum and mechanical energy balances.

Heat Transfer: Thermal conductivity and the mechanisms of energy transport- measurement of thermal conductivity, Fourier's law, steady state conduction, analogy between heat and momentum transfer, Temperature distribution with more than one independent variables- heating in a semi-infinite and finite slab, temperature distribution in turbulent flow-reference to stirred tank reactor, relationship between heat transfer, cell concentrations and stirring conditions.

Mass Transfer: Diffusivity, theory of diffusion, analogy between mass heat and momentum transfer, role of diffusion in bioprocessing, film theory, concentration distribution with more than one independent variable unsteady diffusion, boundary layer theory, concentration distribution in turbulent flow-Corrosion equation, Definition of binary mass transfer coefficients, transfer coefficients at high mass transfer rates-boundary layer theory, penetration theory. Convective mass transfer, Liquid-solid mass transfer, liquid-liquid mass transfer, gas-liquid mass transfer

Oxygen Transfer: Oxygen uptake in cell cultures, Factors affecting cellular oxygen demand, oxygen transfer from gas bubbles to aerobic culture, oxygen transfer in fermenters, bubbles factors affecting oxygen transport sparging, stirring, medium properties, antifoam agents, temperature, mass transfer correlations, measurements of kLa-oxygen balance method, dynamic method.

Syllabus:

Introduction: Biological Treatment of Wastewater – Aerobic System Biological processes for domestic and industrial wastewater treatments; Aerobic systems - activated sludge process, trickling filters, biological filters, rotating biological contractors (RBC), Fluidized bed reactor (FBR), expanded bed reactor, inverse fluidized bed biofilm reactor (IFBBR) packed bed reactors air- sparged reactors. Anaerobic System Anaerobic biological treatment – contact digesters, packed column reactors, UASB

Bioremediation: Introduction, constraints and priorities of Bioremediation, Biostimulation of naturally occurring microbial activities, Bioaugmentation, *in situ*, *ex-situ*, intrinsic & engineered bioremediation. Solid phase bioremediation - land farming, prepared beds, soil piles, Phytoremediation. Composting, Bioventing & Biosparging; Liquid phase bioremediation - suspended bioreactors, fixed biofilm reactors.

Metal Biotechnology Mining and Metal biotechnology: Introduction, with special reference to Copper & Iron. Microbial transformation, accumulation and concentration of metals, metal leaching, extraction and future prospects.

Hazardous Waste Management: Introduction - Xenobiotic compounds, recalcitrance. Hazardous wastes - biodegradation of Xenobiotics and Plastics. Biological detoxification - market for hazardous waste management, biotechnology application to hazardous waste management - examples of biotechnological applications to hazardous waste management – cyanide detoxification - detoxification of oxalate, urea etc. - toxic organics – phenols, STP, antibiotic treatment.

Syllabus:

The Relationship between Protein Structure and Function: Protein synthesis, Protein structure, families of protein structures: alpha, alpha/beta, beta, etc., protein function and structure-function relationships. Ramachandran plot, Motifs of protein structures and their packing, Protein folding pathways in prokaryotes and eukaryotes, Structure of chaperones and role of chaperones in protein folding, Folding of single domain and multi-domain proteins, Inclusion bodies and recovery of active proteins.

Methods in Protein Engineering: Strategies for protein engineering; Protein Engineering with Random and Site-specific mutation, PCR based methods for engineering proteins, Role of low-fidelity enzymes in protein engineering, Gene shuffling and Directed evolution of proteins, Antibody engineering.

Structural Analysis of Proteins: Similar structure and function of homologous proteins, Role of multiple alignment, Homology and ab- initio method for protein structure prediction, Phage display systems; Rational protein design, Different databases and their uses.

Proteome analysis: Introduction to the concept of proteome, components of proteomics, proteomic analysis, importance of proteomics in biological functions, protein identification, protein arrays, protein chips and applications, cross linking methods, affinity methods, yeast hybrid systems, isotope labeling, Protein identification with two-dimensional gel electrophoresis data and mass spectrometry data, Functional proteomics tools.

Metabolic Engineering

Pre-Requisites: **BT1207, BT1303**

Course Outcomes:

CO-1	Explain the concepts of cellular reactions and regulations
CO-2	Identify the appropriate metabolic pathways to produce a desired product
CO-3	Illustrate potential metabolic engineering strategies using quantitative metabolic models
CO-4	Develop metabolic flux models using available tools and software
CO-5	Design effective strategies to implement genetic manipulations

1 - Slightly; 2 - Moderately; 3 – Substantially

Syllabus:

Basic Concepts of Metabolic Engineering: Review of Cellular Metabolism: Transport Processes, Fueling Reactions, Biosynthetic Reactions, Polymerization, Growth Energetics, Comprehensive Models for Cellular Reactions. Comprehensive Models for Cellular Reactions: Stoichiometry of Cellular Reactions, Reaction Rates, Dynamic Mass Balances, Yield Coefficients, and Linear Rate Equations. Material Balances and Data Consistency: The Black Box Model, Elemental Balances, Heat Balance, Analysis of Overdetermined Systems, and Identification of Gross Measurement Errors.

Metabolic regulation and application: Metabolic regulation network at enzyme level and whole cell level, Basic concept and successful application of metabolic engineering with examples such as strain improvement, product overproduction, byproduct minimization, extension of substrate utilization range and product spectrum, xenobiotic degradation.

Systems metabolic modelling: metabolic pathway synthesis algorithm, Metabolic flux analysis and its application, Concepts of Flux balance analysis (FBA), Regulatory on-off Minimization (ROOM) and Minimization of metabolic adjustments (MOMA), Elementary mode, analysis, Extreme pathways, Determination of metabolic fluxes by isotope labelling, and Metabolic control analysis (MCA).

Green Technology

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand historical, global, environmental and economic impacts of biomass technology systems
CO-2	Address biomass energy and non-renewable energy challenges
CO-3	Understand green buildings concept
CO-4	Understand economics of green energy

Syllabus:

Biomass Energy: Basic concepts, sources of biomass energy, uses of biomass energy, science and engineering aspects of biomass energy, estimation of air required for complete combustion, estimation of minimum amount of air required for a fuel of known composition, calculation of the composition of fuel & excess air supplied, from exhaust gas analysis, dew point of products, flue gas analysis (O_2, CO_2, CO, NOx, SOx).

Energy Transformation: Energy transformation from source to services, energy sources, Sun as the source of energy; biological processes; photosynthesis; fossil fuel reserves - estimates, duration; theory of renewability, renewable resources; overview of global/ India's energy scenario.

Environmental Effects: Environmental effects of energy extraction, conversion and use; sources of pollution from energy technologies, criteria for choosing appropriate green energy technologies.

New Green Energy Concepts: Green buildings, green roof design characteristics, conceptual water and energy balance in a green roof, evapotranspiration.

Economics of Energy: Market barriers of biomass fuels, biomass fuel standardization, sustainability of biomass fuels, economics of biomass fuels, fuel stoichiometry and analysis: fuel stoichiometry relations, fuel-wood use in rural households, future energy scenario in rural areas, utilization of biomass in industrial and semi-industrial settings, future utilization of biomass in India.

Essential Biochemistry

Pre-Requisites: **None**

Course Outcomes:

CO-1	Identify the structure and functions of biomolecules
CO-2	Understand complex biochemical pathways and metabolism
CO-3	Determine the kinetic parameters of enzymatic reactions
CO-4	Estimate and separate biomolecules using Chromatography and Electrophoresis
CO-5	Demonstrate biochemical reactions of proteins, carbohydrates and nucleic acids with organic and inorganic solvents

Syllabus:

Introduction: The Facts of Life, Water: The Medium of Life, pH, acids, bases, buffers, weak bonds and covalent bonds. Thermodynamics of Biological Systems.

Molecules of Life: Amino acids and Peptides: Classification of amino acids, Structure and properties of amino acids, Peptide bond and peptide Proteins: Structure and Classification of Proteins. Primary structure, Secondary structure, Tertiary structure and Quaternary structure, aggregated proteins, Structural importance in function, denaturation and renaturation. Nucleic acids: Structure of nucleic acids, Structure of DNA, specialized secondary structures, Principle kinds of RNA and their structures, Carbohydrates: Structure and functions of carbohydrates and glycoproteins. Lipids: Structure of Fats and Oils, Phospholipids, membrane lipids, Vitamins: Introduction, classification and functions of vitamins, disease of vitamins deficiency.

Metabolism: Glycolysis, Gluconeogenesis, and the Pentose Phosphate Pathway, The Citric Acid Cycle, Amino Acid Oxidation, Oxidative Phosphorylation and Photophosphorylation, DNA Metabolism, RNA Metabolism, Protein Metabolism, Analytical techniques in biochemistry for small molecules and macro-molecules for quantification.

Enzymes: Enzymes and Enzyme Kinetics: Enzymes as biological catalysts, classification, Examples of enzymes catalyzed reactions, Michaelis–Menten approach to enzyme kinetics, and mechanism of enzyme action

Laboratory: Any five experiments.

1. Qualitative analysis of carbohydrates, amino acids and proteins.
2. Quantitative estimation of protein by Biuret method and Lowry method.
3. Quantitative estimation of reducing sugars by DNS method.
4. Quantitative estimation of total sugars by anthrone method.
5. Quantitative estimation of DNA by diphenylamine method.
6. Quantitative estimation of RNA by orcinol method.
7. Determination of absorption maxima (λmax).
8. Estimation of nucleic acids and protein purity by spectrometric analysis.
9. Quantitative estimation of protein and nucleic acids concentration by UV-absorption method.
10. Effect of substrate concentration and determination of Michaelis–Menten parameters Vmax & Km.
11. Separation of amino acids by thin layer chromatography
12. Determination of molecular weight of a protein by SDS-PAGE.

Foundations in Cell Biology

Pre-Requisites: **BT1M01**

Course Outcomes:

CO-1	Understand cell theory and cellular compartmentalization
CO-2	Describe structure and function of the plasma membrane and cell organelles
CO-3	Comprehend the molecular mechanisms of cell cycle
CO-4	Relate the importance of cell cycle on cancer development
CO-5	Explain the role of apoptotic cell death in cellular development
CO-6	Perform cell manipulation techniques used in basic cell biology research

Syllabus:

Introduction to Cell, Structure and Function: Discovery of cells & Basic properties of cell, Cell theory; Cell complexity, Different classes of cells; Prokaryotic & Eukaryotic cell. Structural organization and function of intracellular organelles, Cell membrane components, Basics of membrane transport systems.

Cell Division and Cell Cycle: Mitosis, meiosis, cell cycle checkpoint, molecular mechanics of cell cycle, role of cyclin dependent kinases in controlling the cell cycle, cell death and cell renewal.

Cell Signaling: Introduction to cell signaling, Intracellular signaling and types of signal receptors, Signal Transduction by hormones - Steroid / Peptide hormones, Concept of Secondary messengers.

Stem Cells and Cancer: Embryonic and adult stem cells, Cell differentiation, Cancer biology basics, Characteristics of Cancer Cells, Types of Tumors, Molecular Basis of Cancer – Proto oncogene, Tumor Suppressor gene.

Laboratory: Any five experiments.

Demonstration of microscopes, determining the cell concentration using hemocytometer, smear preparation and staining (bacteria, animal and plant cells), cell division – mitosis, microscopic determination of cell viability using membrane permeability assay, fluorescent labeling and microscopic detection of cellular components (direct and indirect labeling).

BT1M03 **2-0-2 (3)**

Principles of Bioprocess Engineering

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand the roles and responsibilities of a bioprocess engineer
CO-2	Understand sterilization techniques and estimate the sterilization time
CO-3	Comprehend rheology of fermentation fluids& determine power requirement in bioreactors
CO-4	Develop design equations for bioreactors & calculate oxygen demand for cell growth
CO-5	Understand the scale up concepts for bioprocesses
CO-6	Identify sensors and instruments needed for measurement and control

Syllabus:

Introduction to Bioprocessing: Role of a bioprocess engineer, Kinetics of microbial growth, substrate utilization and product formation; Simple structured models, Design of fermentation media.

Sterilization: Media sterilization; kinetics of thermal death of cells & spores, design of batch and continuous thermal sterilization, sterilization of air and filter design, Radiation and chemical sterilization.

Batch, Fed-Batch and Continuous Processes: Operation of batch, continuous and fed- batch processes and industrial applications, Comparison of batch, fed-batch and continuous processes.

Rheology of Fermentation Fluids: Newtonian and non-Newtonian fluids, Aeration and agitation, power requirement for gassed and un-gassed systems, time calculation for mixing.

Mass Transfer in Bioreactors: Theories of mass transfer, metabolic oxygen demand, measurement of KLa, Maximum cell concentration

Instrumentation in Bioreactors: On-line and off-line measurement various types of microbial and enzyme reactors, Bioreactor Considerations for Animal Cell Culture and plant cell culture. Fermentation: Structured and Unstructured Models, Optimization of Fermentation media.

Laboratory: Any five experiments.

Growth kinetics of bacteria in a fed-batch reactor, enzyme immobilization, microbial death kinetics, residence time distribution, fluidized bed bioreactor for cell cultivation, determination of mixing time and power number in chemostat, effect of temperature, pH substrate concentration on enzyme activity, inhibition kinetics and estimation of biomass.

Elements of Bioseparations Technology

Pre-Requisites: **BT1M03**

Course Outcomes:

CO-1	Understand separation techniques used in downstream process
CO-2	Design and optimize downstream processes
CO-3	Understand the requirements for successful operation of downstream processes
CO-4	Understand the principles of major unit operations used in downstream processing of biopharmaceuticals

Syllabus:

Scope of Bioseparations Technology: Importance of Bioseparations technology in biotechnology, Characteristics of products, criteria for selection of bio-separation techniques. Economics of bioseparations in biotechnology, cost-cutting strategies

Recovery of Intracellular Products: Cell disruption methods – physical methods (osmotic shock, grinding with abrasives, solid shear, liquid shear) – chemical methods (alkali, detergents) – enzymatic methods.

Solid-Liquid Separation: Centrifugation: Principles of centrifugation, various centrifuges; basket centrifuge, tabular centrifuge, disc-bowl centrifuge. Membrane separation processes: Basic principles of membrane separation, different types of membranes, criteria for selection of membranes.

Chromatography: Principles of chromatographic separation methods, different types of chromatographic methods, ion – exchange chromatography, gel chromatography, affinity chromatography etc. Applications in bio-processing. Electrophoresis of proteins, Protein Precipitation, Dialysis; Extraction and Freeze Drying.

Laboratory: Any five experiments.

Extraction of intracellular proteins by cell disruption methods, centrifugation methods, precipitation methods, dialysis, lyophilization, ion exchange chromatography, gel filtration chromatography, affinity chromatography, tangential filtration methods, NATIVE electrophoresis, storage methods for isolated products.

Systems Biology for Engineers

Pre-Requisites: BT1M01, BT1M03

Course Outcomes:

CO-1	Understand basic, advanced principles of systems biology and biological networks Applications
CO-2	Understand networks behavior and emergent properties of biological networks/Systems
CO-3	Apply kinetics principles to develop systems level mathematical models in biology
CO-4	Create predictive mathematical models of biological interaction networks to explore their emergent behavior
CO-5	Draw insights form systems level models/ studies for biotechnological and biomedical applications

Syllabus:

Systems Biology Fundamentals: Introduction to systems biology; high throughput experimental techniques: gene array, protein array, two-hybrid systems; model formulation based on enzyme kinetics, Michaelis-Menten kinetics, mass actions kinetics, Hill equation, steepness, threshold phenomenon, ultra-sensitivity, steady state, dynamic and stochastic models in system biology.

Molecular Networks to Cellular Behavior: Emergent properties of biological networks; complexity, adaptability, biostability, robustness and evolvability; introduction to network motifs, elements of transcription networks, dynamics and response time of simple gene regulation, autoregulation, feed forward loops (FFLs), temporal expression programs and global structure

Case Studies, Computations Tools and Applications: Signal transduction networks, *E. coli* chemotaxis network, infection model, robustness patterning in development- morphogen profiles, fruit fly patterning, threshold and negative feedback loop in rhythmic processes (oscillations) of complex biological system, Computational tools and software packages, Synthetic biology: building and analyzing synthetic networks, systems pharmacology, Systems Biology and Artificial Intelligence.

Laboratory: Any five experiments.

Dynamics of a simple gene regulation, Dynamics of small interaction network with coupled ODE, Bi-stable Switch and Multi-stability, Dynamics of Circadian Rhythm and limit cycle, Dynamics of MOTIFs, Pattern formation using PDE. Dynamics of Prey-predatory model, Dynamics of SIR model and disease spread.

In Silico Drug Discovery

Pre-Requisites: **None**

Course Outcomes:

CO-1	Understand the concept of structure-function relationship of lead molecules in drug discovery
CO-2	Understand the process of target identification in drug discovery
CO-3	Apply proteomics and genomics techniques in drug-discovery and design process
CO-4	Understand the drug delivery systems
CO-5	Design new drugs using computational methods

Syllabus:

Insights into the Drug Design Process: Drug design process for a known protein target – Structure based drug design process, finding initial hits, Compound refinement. Ligand based drug design process, finding initial hits using online/offline software.

Stereochemistry in Drug Design: Peptides, Peptidomimetics. Bonded and non - bonded interactions, Drug delivery systems for proteins, peptides with special reference to oral & nasal routes. Delivery consideration of biotechnological products: Stability profile, Barriers to peptides, protein delivery, Delivery of protein and peptide drugs, Toxicity profile characterization, druggable targets.

Computational Approaches: Quantification of Molecular diversity and design of compound libraries, physicochemical concept of in drug design. History of QSAR, 2D-QSAR; 3D-QSAR, descriptors of QSAR, Tools and techniques of QSAR, Parameters Used in QSAR, Applications of QSAR, 3D pharmacophore hypothesis

Introduction to Docking: Scoring functions, Docking Process – Protein Preparation, Building the ligand, setting the bounding box, running the docking calculations. Molecular docking software and their utilities in drug design. High-throughput screening.

Laboratory: Any five experiments.

Design and 2D sketching of ligand /drug, introduction to protein structure and visualization tools, generation and preparation of 3D optimized structure of ligand and receptor for docking, docking of receptor-ligand and analysis of results, docking of protein-protein and analysis of results, estimation of binding free energy of ligands and receptor, introduction to molecular dynamics simulation methods, introduction to molecular dynamics analysis methods.

Introductory Modelling Simulation and Optimization of Bioprocesses

Pre-Requisites: **BT1M03**

Course Outcomes:

CO-1	Understand modeling principles
CO-2	Formulate balance equations
CO-3	Analyze batch, semi continuous / fed batch operation
CO-4	Develop enzyme and growth kinetic models
CO-5	Comprehend bioreactor modeling
CO-6	Develop models for biological systems

Syllabus:

Introduction to Modeling: Modeling principles, use of models for understanding, design and optimization of bioreactors, concepts of models, types of models, use of models in bioprocess.

Classification of Models: Mathematical model, Physical models, static and dynamic models, analytical and mathematical models, linear and nonlinear models, stable and unstable models, steady state and transient models, descriptive and normative models, distributed lag model, mechanistic models, structured and unstructured models, segregated and un segregated models.

Approaches for Model Development: Mass balance models, formulation of balance equations, types of mass balance equations, balancing procedure, continuous stirred tank bioreactor, tubular reactor, component balances for reacting systems, constant volume continuous stirred tank reactor, semi-continuous reactor with volume change, steady-state oxygen balancing in fermentation, bioreactor modeling, biomass productivity, modeling of tubular plug flow bioreactors, simulation examples of biological reaction, processes using Berkeley Madonna, batch fermentation, chemostat fermentation, fed batch fermentation, kinetics of enzyme action, repeated fed batch culture.

Laboratory: Any five experiments.

Bioprocess Modeling using SuperPro Designer: Flow sheeting of the bioprocess using SuperPro designer, design of various bioreactors using SuperPro designer, case studies of bioprocess optimization.

SYLLABI

Honors: Biotechnology

BT1H01 **3-0-0 (3)**

Nutrigenomics

Pre-Requisites: **BT1204**

Course Outcomes:

CO-1	Demonstrate the concepts of Nutrition and Genomics
CO-2	Explain the role of differential gene expressions in diseases
CO-3	Analyze nutritional genomics in association with human metabolism and diseases
CO-4	Evaluate the nutritional data using computational tools

Syllabus:

Introduction to Nutrigenomics: Genome, genomics, nutrigenetics, nutrigenomics: A brief introduction, primer on genomics and beyond, Genome-wide association studies. Nutrigenomics: measuring nutrition-responsive genome activity, Transcriptomics, Proteomics, and Metabolomics. Nutrigenetics: measuring interindividual response to nutrients, Genetic responses to individual nutrients.

Expression of Nutrigenomics: Nutrient–Gene Interactions: Lunasin Structure and Function, Lunasin Treatment of Prostate Cancer and Gene Expression Profiling, Lunasin-Induced Gene Expression Profiles, Genes Involved in Suppression of Cell Proliferation, Genes Involved in Protein Degradation, Modulation of Gene Expression by Dietary Iron, Zinc, Selenium.

Nutritional Metabolic Responses: Nutrigenomic approaches to understand the transcriptional and metabolic responses, obesity, anti-obesity action of Luteolin, Inflammation, and Cardiometabolic syndrome. Applications of genomics and bioinformatics in nutrition. Nutritional genomics: cellular signaling and molecular targets, Vitamin-D on cardiovascular disease.

Advances in Nutrigenomics: Personalization the norm of Nutrigenomics, Public Health and Nutrigenomics, Public Health Applications of Nutrigenomics, Implementation and Evaluation. Bio-computation and analysis of complex datasets in Nutritional Genomics: Nutritional Genomics: Part of High-Throughput Biology, Proteomics and Metabolomics Data, Sources of Complexity in Nutritional Genomics, Data Sets in Nutritional Genomics, Level of Complexity in Gene Expression Experiments.

Biomaterials and Tissue Engineering

Pre-Requisites: **BT1206, BT1208**

Course Outcomes:

CO-1	Classify different stem cells
CO-2	Explain the construction of connective tissues
CO-3	Select the procedure for isolation and identification of stem cells
CO-4	Construct scaffolds for tissue engineering
CO-5	Identify regulatory considerations for biomaterials used in tissue engineering

Syllabus:

Cell Culture Medium: Introduction to the balanced salt solutions and growth medium, Chemical, physical and metabolic functions of different constituents of culture medium, role of carbon-di- oxide and role of serum and its supplements in maintaining cells in culture medium, serum and protein free defined media and their application.

Maintenance of Cells: Biology and characterization of cultured cells, Maintenance and management of cell lines, Scale-up of animal cells in culture, Scale-up of anchorage dependent cells and suspension cultures: Cell isolation and selection; cell preservation.

Stem Cells: Definition, classification and sources, Properties and application of embryonic stem cells, Cell adhesion – Extracellular matrix, In vitro cell proliferation, Induced pluripotent stem cells.

Tissue Engineering: Elements of biomaterials, Mechanical concepts in biomaterials, Characterization of biomaterials, Methods for the determination of biocompatibility, Basic techniques to manufacture scaffolds, Bioreactor for tissue engineering –Design and scale up, Hollow fiber systems, Micro carrier-based systems.

Agricultural Biotechnology

Pre-Requisites: **None**

Course Outcomes:

CO-1	Apply plant tissue culture techniques in agriculture and horticulture
CO-2	Understand the utility of mycorrhiza as biofertilizers in agriculture
CO-3	Apply biotechnology techniques in the field of agriculture
CO-4	Comprehend biosafety regulations for genetically modified crops
CO-5	Understand quality improvement techniques used for commercial crop varieties

Syllabus:

Introduction to Agriculture: An introduction, Impact of Biotechnology on Agrobiodiversity; Biotechnology for Agriculture; Micropropagation Technology and its use in Agriculture, Role of biofertilizers and bio-pesticides in sustainable agriculture, Mass cultivation of microbial inoculants, plant growth promoting rhizobacteria diazotrophic microorganism, Free living and symbiotic nitrogen fixing microbes, Molecular basis of legume rhizobium symbiosis.

Biofertilizer in Agriculture: Mechanism of biological nitrogen fixation process, Study of nitrogen fixation, rhizobial nodulation gene and hydrogen uptake genes in nitrogen fixation process. Production of biofertilizers and applications of rhizobium, azotobacter, azolla and, mycorrhiza: Applications in agriculture and forestry, Plant growth regulators in agriculture and horticulture.

Molecular Application in Agriculture: Molecular aspects of biotic and abiotic stress responses and genetic engineering for drought, salinity and Temperature. Insect resistance – BT gene applications. Virus resistance – coat protein mediated, nucleocapsid gene and RNAi approach. Fungal resistance – PR proteins chitinase, beta glucanases. Nematode resistance – Nematode infestation and engineering for nematode resistance. Long shelf-life of fruits and flowers: use of ACC synthase, polygalacturanase, ACC oxidase. Male sterile lines: barstar and barnase systems. Genetic improvement of nutritional quality of oils.

Quality Improvement using Agricultural Biotechnology: Improvement of qualitative characters – Nutritional value of storage products – elite strains rich in iron, protein and amino acids, golden rice and its color – anthocyanines, betalaines, crocin and crocetins. Flavors – capsaicin, vanillin, stevioside thaumatin, The recent trends in agriculture.

Recombinant DNA Technology

Pre-Requisites: **BT1303**

Course Outcomes:

CO-1	Design suitable cloning strategies for bacteria, plant and animal cells
CO-2	Apply appropriate mutagenesis approach to generate desired genetic combination
CO-3	Design cloning strategies for heterologous gene expression in bacteria and yeast
CO-4	Apply appropriate gene transfer techniques for animals and plants
CO-5	Develop transgenic organisms for the benefit of society

Syllabus:

Molecular Cloning and Advanced Vectors: Plasmids and Phage Vectors, Cosmids, phagemid and other advanced vectors: phage-derived PACs, BACs, YACs and gateway cloning vectors—cloning strategies.

Mutagenesis Strategies: Changing genes – site directed mutagenesis, reverse mutagenesis, cassette mutagenesis. Gene knockout, RNA interference, CRISPR-Cas9, transposon mutagenesis.

Cloning Strategies in Bacteria other than *E. coli* and Yeasts: Cloning in gram negative and gram-positive bacteria—Different vectors and suitable cloning strategies. Integrative vectors for fungi, Yeast promoter systems for over expression of genes, multipurpose vectors.

Gene Transfer Strategies: Gene transfer strategies and generation of transgenic plants and animals—Transfection techniques and use of suitable selectable markers, over expression of transgenes, Agrobacterium mediated transformation, Direct DNA transfer method and use of viral vectors for plants and animals, Advance transgenic technologies.

Bioeconomy and Biorefineries

Pre-Requisites: BT1207, BT1301

Course Outcomes:

CO-1	Understand biofuel policies, law, demand and supply barriers
CO-2	Analyze biomass composition and structure
CO-3	Apply concept of biorefinery to substitute oil dependent economy
CO-4	Utilize synthetic biology and metabolic engineering principles for biofuels production
CO-5	Evaluate the standards and life cycle assessment of biofuels

Syllabus:

Introduction to Biofuels: Oil economy Vs Bio economy, working principle of IC engines, Biofuels in the global energy scene, National biofuel policy and law. Biofuel Feedstocks.

Biomass Conversion and Bioprocess Technologies: Classification of biofuels, Biomass composition and analysis. Biomass conversion technologies. First, second, third and advanced biofuels production technologies/process and challenges. Consolidated bioprocess engineering (CBP) for biofuels. Concept of Bio refinery: Biomass to value added compounds, Bioelectricity.

Synthetic Biology and Metabolic Engineering for Biofuels: Biomass converting enzymes and manipulations, Synthetic biology and metabolic engineering approaches (case studies) for biofuels production.

Analysis and Assessment of Biofuels: Life Cycle assessment of biomass and biofuels, Standards of biofuels, Exergy analysis of biofuels.
