Vision and Mission of the Institute National Institute of Technology Warangal

VISION

Towards a Global Knowledge Hub, striving continuously in pursuit of excellence in Education, Research, Entrepreneurship and Technological services to the society

MISSION

- Imparting total quality education to develop innovative, entrepreneurial and ethical future professionals fit for globally competitive environment.
- Allowing stake holders to share our reservoir of experience in education and knowledge for mutual enrichment in the field of technical education.
- Fostering product-oriented research for establishing a self-sustaining and wealth creating centre to serve the societal needs.

Vision and Mission of the Department Electrical Engineering

VISION

To excel in education, research and technological services in electrical engineering in tune with societal aspirations.

MISSION

- Impart quality education to produce globally competent electrical engineers capable of extending technological services.
- Engage in research & development in cutting edge and sustainable technologies.
- Nurture scientific temperament, professional ethics and industrial collaboration.

Program: B.Tech. Electrical and Electronics Engineering

Program Educational Objectives

PEO-1	Design, develop, innovative products and services in the field of electrical and electronics engineering.
PEO-2	Apply the knowledge of electrical and electronics engineering to solve problems of social relevance,
PEO-3	Work effectively as individuals and as a team in multidisciplinary projects.
PEO-4	Engage in lifelong learning, pursue higher education and research, career enhancement and adapt to changing professional needs.

Program Articulation Matrix

Mission Statements \ PEO	PEO-1	PEO-2	PEO-3	PEO-4
Impart quality education to produce globally competent electrical engineers capable of extending technological services.	3	3	2	2
Engage in research & development in cutting edge and sustainable technologies.	1	2	1	3
Nurture scientific temperament, professional ethics and industrial collaboration.	3	3	2	2

1 - Slightly

2 - Moderately

3 - Substantially

**Program: B.Tech. Electrical and Electronics Engineering****Program Outcomes**

PO-1	Engineering knowledge: Apply the knowledge of mathematics, science, Engineering fundamentals, and Electrical Engineering to the solution of complex engineering problems.
PO-2	Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
PO-3	Design/Development of solutions: Design solutions for complex Electrical engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO-4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO-5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex civil engineering activities with an understanding of the limitations.
PO-6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO-7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO-8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO-9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO-10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-11	Project management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes

PSO-1	Analyse, synthesize and design electrical and electronic equipment and systems to enhance the quality of human life.
PSO-2	Develop innovative and environment-conscious electrical and electronic technologies to sustain human life.

CURRICULUM
B.Tech. Electrical and Electronics Engineering

1st Semester

S.No.	Code	Course Title	L-T-P	Credits
1	MA1161	Linear Algebra, Calculus and Ordinary Differential Equations	3-0-0	3
2	PH1161	Engineering Physics	3-0-2	4
3	EE1101	Electric and Magnetic Fields	3-0-0	3
4	CS1101	Programming and Data Structures	3-0-0	3
5	BT1161	Biology for Engineers	2-0-0	2
6	CS1103	Programming and Data Structures Lab	0-1-2	2
7	IC1101	EAA-I (Games & Sports / Yoga & Wellness)	0-0-0	0
Total Credits				17

2nd Semester

S.No.	Code	Course Title	L-T-P	Credits
1	MA1162	Integral Calculus, Vector Calculus and Laplace Transforms	3-0-0	3
2	CY1161	Engineering Chemistry	3-0-2	4
3	HS1161	English for Technical Communication	2-0-2	3
4	CE1164	Basic Engineering Mechanics	3-0-0	3
5	EE1102	Design Thinking	0-1-4	3
6	EE1104	Electrical Circuits – I	3-0-0	3
7	ME1165	Engineering Workshop Practice	0-1-2	2
8	IC1102	EAA-II (Games & Sports / Yoga & Wellness)	0-0-0	0
Total Credits				21

**3rd Semester**

S.No.	Code	Course Title	L-T-P	Credits
1	MA1261	Fourier Series, Partial Differential Equations and Complex Variables	3-0-0	3
2	EE1201	Electrical Circuits – II	3-0-0	3
3	EE1203	Electrical Machines – I	3-0-0	3
4	EE1205	Power Systems – I	3-0-0	3
5	EC1261	Analog Electronics	3-0-0	3
6	EE1207	Electrical Circuits Lab	0-1-2	2
7	EC126X	Analog Electronics Lab	0-1-2	2
Total Credits				19

4th Semester

S.No.	Code	Course Title	L-T-P	Credits
1	EE1202	Electrical Machines – II	3-0-0	3
2	EE1204	Power Systems – II	3-0-0	3
3	EE1206	Control Systems	3-0-0	3
4	EE1208	Electrical Measurements & Instrumentation	3-0-2	4
5	EC1262	Switching Theory and Logic Design	3-0-0	3
6	EE1210	Electrical Machines Lab – I	0-1-2	2
7	EC1264	IC Applications Lab	0-1-2	2
Total Credits				20

**5th Semester**

S.No.	Code	Course Title	L-T-P	Credits
1	EE1301	Power Electronics	3-0-0	3
2	EE1303	Microprocessors & Microcontrollers	3-0-2	4
3	EE1305	Power System Operation & Control	3-0-0	3
4	MS1262	Business Essentials for Engineers	3-0-0	3
5	EE13XX	Professional Elective – I	3-0-0	3
6	EE1307	Electrical Machines Lab – II	0-1-2	2
7	EE1309	Control Systems Lab	0-1-2	2
8	EE1381	Fractal Course – I	1-0-0	0.5
Total Credits				20.5

6th Semester

S.No.	Code	Course Title	L-T-P	Credits
1	EE1302	Power System Protection	3-0-0	3
2	EE1304	Digital Signal Processing	3-0-0	3
3	EE13XX	Professional Elective – II	3-0-0	3
4	EE13XX	Professional Elective – III	3-0-0	3
5	EE1306	Product Development	0-1-4	3
6	EE1308	Power Systems Lab	0-1-2	2
7	EE1310	Electrical Simulation Lab	0-1-2	2
8	EE1382	Fractal Course – II	1-0-0	0.5
Total Credits				19.5

**7th Semester**

S.No.	Code	Course Title	L-T-P	Credits
1	EE1401	Electric Drives	3-0-0	3
2	EE14XX	Professional Elective – IV	3-0-0	3
3	EE14XX	Profession Elective – V	3-0-0	3
4	EE14XX	Open Elective	2-0-0	2
5	EE1403	Power Electronics & Drives Lab	0-1-2	2
6	EE1405	Digital Signal Processing Lab	0-1-2	2
7	EE1489	Seminar & Technical Writing	0-0-0	2
8	EE1491	Short Term Industrial / EPICS / Research Experience	0-0-0	2
9	EE1495	Minor Project	0-0-0	2
Total Credits				21

8th Semester

S.No.	Code	Course Title	L-T-P	Credits
1	EE14XX	Professional Elective – VI	3-0-0	3
2	EE14XX	Professional Elective – VII	3-0-0	3
3	EE14XX	Professional Elective – VIII	3-0-0	3
4	EE1498	Major Project	0-0-0	6
Total Credits				15

**Professional Elective Courses**

Professional Elective – I		
S.No.	Code	Course Title
1	EE1321	Utilization of Electrical Energy
2	EE1323	Industrial Instrumentation and Automation
3	EE1325	IoT in Electrical Engineering
4	EE1327	Special Machines
5	EE1329	Python Programming

Professional Elective – II & III		
S.No.	Code	Course Title
1	EE1322	Design of Electrical Systems
2	EE1324	AI Techniques in Electrical Engineering
3	EE1326	Computer Methods in Power Systems
4	EE1328	High Voltage Engineering
5	EE1330	Modelling & Analysis of Electrical Machines
6	EC1364	Synthesis of Digital Systems

Professional Elective – IV & V		
S.No.	Code	Course Title
1	EE1421	Switched Mode Power Conversion
2	EE1423	Planning an Entrepreneurial Venture
3	EE1425	Illumination Engineering
4	EE1427	Power Quality
5	EE16025	Electric Vehicles
6	EE36021	Restructured Power Systems
7	EE46001	Linear Control System

Professional Elective – VI, VII & VIII		
S.No.	Code	Course Title
1	EE1422	HVDC & FACTS
2	EE1424	Smart Grid Technologies
3	EE1426	Advanced Electrical Drive Systems
4	EE1428	State Space Approach to Control Systems
5	EC1462	VLSI
6	EE16026	Control and Integration of Renewable Energy Sources
7	EE16034	Advanced Control Techniques for Power Converters
8	EE26022	Real-Time Control of Power Systems
9	EE26024	Distribution System Planning and Automation
10	EE26030	Evolutionary Algorithms Applications in Power Engineering

**Basic Science Courses**

S.No.	Code	Course Title	L-T-P	Credits
1	MA1161	Linear Algebra, Calculus and Ordinary Differential Equations	3-0-0	3
2	PH1161	Engineering Physics	3-0-2	4
3	CY1161	Engineering Chemistry	3-0-2	4
4	MA1162	Integral Calculus, Vector Calculus and Laplace Transforms	3-0-0	3
5	MA1261	Fourier Series, Partial Differential Equations and Complex Variables	3-0-0	3

Engineering Science Courses

S.No.	Code	Course Title	L-T-P	Credits
1	BT1161	Biology for Engineers	2-0-0	2
2	CS1101	Programming and Data Structures	3-0-0	3
3	CS1103	Programming and Data Structures Lab	0-1-2	2
4	CE1161	Engineering Mechanics	3-0-0	3
5	ME1165	Engineering Workshop Practice	0-1-2	2

Humanities and Social Science Courses

S.No.	Code	Course Title	L-T-P	Credits
1	HS1161	English for Technical Communication	2-0-2	3
2	MS1262	Business Essentials for Engineers	3-0-0	3
3	IC1101	EAA – I	--	0
4	IC1102	EAA – II	--	0

The Overall Credit Structure

Course Category	Credits
Basic Science	17
Engineering Science	12
Humanities and Social Sciences	6
Program Core	92
Professional Elective	24
Open Elective	2
Total Graded Credit Requirement	153

Minor in Electrical Engineering

S.No.	Code	Course Title	L-T-P	Credits
1	EE1M01	Electrical Measurement Techniques	3-0-0	3
2	EE1M02	Elements of Electrical Power Systems	3-0-0	3
3	EE1M03	Power Converters and Applications	3-0-0	3
4	EE1M04	Industrial Applications of Electrical Energy	3-0-0	3
5	EE1M05	Elements of Smart Grid Systems	3-0-0	3
Total Credits				15

Honors in Electrical & Electronics Engineering:

S.No.	Code	Course Title	L-T-P	Credits
1	EE16028	High Power Inverters	3-0-0	3
2	EE46024	Digital Control Systems	3-0-0	3
3	EE16027	Power Quality Improvement Techniques	3-0-0	3
4	EE26001	Advanced Computational Methods in Power Systems	3-0-0	3
5	EE26002	Digital Protection of Power Systems	3-0-0	3
Total Credits				15

DETAILED SYLLABI

B.Tech. Electrical and Electronics Engineering

1st Semester

MA1161

3-0-0 (3)

Linear Algebra, Calculus and Ordinary Differential Equations**Pre-requisites:** None**Course Outcomes:**

CO-1	Understand to solve the consistent system of linear equations
CO-2	Apply orthogonal transformations to a quadratic form
CO-3	Determine the series expansion of a given function
CO-4	Explore the properties of functions of several variables
CO-5	Solve arbitrary order linear differential equations

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-2	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-3	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-4	3	3	1	2	1	-	-	-	-	-	-	-	2	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Linear Algebra: Vector space, Subspace, Examples, Linear span, Linear independence and dependence, Basis, Dimension, Extension of a basis of a subspace, Intersection and sum of two subspace, Examples. Linear transformation, Kernel and Range of a linear map, Rank-Nullity Theorem (without proof). Rank of a matrix, Row, and column spaces, Solvability of the system of linear equations, Inner product spaces, Orthogonal basis, Gram-Schmidt orthogonalization process. Eigenvalues, Eigenvectors, and properties Caley-Hamilton Theorem (without proof) and applications, diagonalization of a matrix, diagonalization by similarity, and orthogonal transformations.

Differential Calculus: Taylor's theorem with remainders; Taylor's and Maclaurin's expansions; Functions of several variables – continuity, differentiability, partial derivatives, Euler's theorem, change of variables, Jacobians, Functional dependence; Maxima and minima of functions of several variables (2 and 3 variables) - Lagrange's method of multipliers.

Ordinary Differential Equations: First order differential equations - Basic definitions, Geometric interpretation of solutions of first-order ODE $y' = f(x, y)$, Exact differential equations, Integrating factors, Linear equation, Reducible to linear form: Bernoulli's equations; Orthogonal trajectories; Higher order linear differential equations with constant coefficients - Cauchy-Euler and Legendre's differential equations, Method of variation of parameters - System of linear differential equations; Applications to physical problems.

Learning Resources:Text Books:

1. Howard Anton and Chris Rorres, Elementary Linear Algebra with Supplementary Applications, John Wiley & Sons, 2014, 11th Edition.
2. George B. Thomas and Ross L. Finney, Calculus and Analytic Geometry, Pearson, 2020, 9th Edition.

3. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley and Sons, 2015, 8th Edition.

Reference Books:

1. Dennis G. Zill, Advanced Engineering Mathematics, Jones & Bartlett Learning, 2018, 6th Edition.
2. R. K. Jain and S. R. K. Iyengar, Advanced Engineering Mathematics, Narosa Publishing House, 2016, 5th Edition.

**Engineering Physics****Pre-requisites:** None**Course Outcomes:**

CO-1	Examine the concepts of Interference, diffraction, polarisation to solve engineering problems.
CO-2	Assess the technological applications of lasers and optical fibers.
CO-3	Apply the quantum mechanical principles for solving engineering problems.
CO-4	Understand the basics of nanomaterials and their engineering applications.
CO-5	demonstrate the production, detection and applications of ultrasonics.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	1	2	-	-	-	-	-	-	-	-	3	2
CO-2	3	3	2	2	-	-	-	-	-	-	-	-	3	2
CO-3	3	3	2	2	-	-	-	-	-	-	-	-	3	2
CO-4	3	3	2	2	-	-	-	-	-	-	-	-	3	2
CO-5	3	3	2	2	-	-	-	-	-	-	-	-	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Interference: Principle of Superposition, Coherence and Coherent Sources, Production of Coherent Light, Young's Double Slit Experiment, Concept of interference, Newton's Rings, working of Michelson Interferometer, Fabry-Perot Interferometer, and its application as wavelength filter.

Diffraction: Definition and types of Diffractions, Huygen's Principle and types of wave fronts, types of Diffraction, Single Slit Diffraction, Double Slit Diffraction, Diffraction Grating, Derivation of Resolving Power and Dispersive Power, Rayleigh's Criterion and applications.

Polarization: Introduction to Polarization, Production of Polarized Light by Reflection and Refraction, Phenomenon of Double Refraction, Construction and Working of Nicol's Prism, Half-Wave and Quarter Waveplates, Representation of Different Polarized Lights, Optical Activity, Practical Applications of Polarized Light, Construction and Working of Laurent's Half Shade Polarimeter and Engineering Applications.

Lasers & Optical Fibers: Basic theory of Laser, Fundamentals of lasers, Einstein Coefficients, Characteristics of Laser Pumping Mechanisms; Basic Components of Laser System, 2-Level, 3-Level and 4-Level Systems, Construction and working of He-Ne, Nd-YAG, and semiconductor diode Lasers and Engineering Applications of Lasers. Basic Principle of Optical Fiber, Derivation-Numerical Aperture and Acceptance Angle, Types of Optical Fibers (Step and Graded Index, Single Mode and Multimode), Applications in Communications and Sensors.

Quantum Mechanics: Concepts and experiments that led to the discovery of Quantum Nature, de Broglie hypothesis of matter waves, Heisenberg uncertainty principle, Schrodinger time independent and time dependent wave equations, the free particle problem, Particle in an infinite and finite potential well, Quantum mechanical tunnelling and applications.

Nanomaterials: Introduction and importance of Nanomaterials, classification (0D, 1D, 2D and 3D) of nanomaterials, properties of nanomaterials, carbon-based nanomaterials, synthesis of nanomaterials, top-

down and bottom-up approaches, characterization of nanomaterials, Engineering Applications of Nanomaterials.

Ultrasonics: Production, detection, and applications of ultrasonics.

List of Experiments:

1. Determination of Wavelength of Sodium light using Newton's Rings.
2. Determination of Wavelength of He-Ne laser - Metal Scale.
3. Measurement of Width of a narrow slit using He- Ne Laser.
4. Determination of Specific rotation of Cane sugar by Laurent Half-shade Polarimeter.
5. Determination of Numerical aperture, loss, Acceptance angle of optical fiber.
6. Determination of plank constant by photo electric effect.
7. Determination of I – V characteristics of photo diode.
8. Diffraction grating by normal incidence method.
9. Determination of capacitance by using R-C circuit.
10. Determination of resonating frequency and bandwidth by LCR circuit
11. Strain Gauge
12. Dielectric constant measurements
13. Determination of carrier concentration, charge by using Hall effect experiment
14. Study of I-V characteristics of Solar Cell
15. Determination of velocity of ultrasonic waves and adiabatic compressibility of liquids using ultrasonic interferometer.

Learning Resources:

Text Books:

Electric and Magnetic Fields

Pre-Requisites: None**Course Outcomes:**

CO-1	Compute electric and magnetic fields for symmetrical charge and current configurations and the force between charges and currents.
CO-2	Calculate capacitance and inductance of common conductor configurations and the energy stored in them.
CO-3	Analyze time varying fields using Maxwell's equations and compute the energy stored in electromagnetic fields
CO-4	Understand the Electro-mechanical Energy conversion from the concepts of field- energy and coenergy

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	1	1	2	1	1	1	1	1	1	3	3	2
CO-2	3	3	1	1	2	1	1	1	1	1	1	3	3	2
CO-3	3	3	1	1	2	2	1	1	1	1	1	3	3	2
CO-4	3	2	1	1	2	1	1	1	1	1	1	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Overview of Coordinate System and Vector Calculus: Scalar and vector fields, overview of coordinate system, calculus of scalar and vector fields in Cartesian and curvilinear coordinates, Review of the concepts of gradient, divergence and curl.

Electrostatics: Electrical and magnetic Fields in electrical apparatus, Coulomb's law, Electrical field intensity, electric flux density, electric field due to point, line, sheet, spherical charge distributions, Gauss' law and its applications, Divergence and curl of electrostatic field, Energy expended in moving a charge in an electric field, electric potential, potential due to point, line, spherical charge distributions, potential gradient, Poisson's and Laplace' equations, Uniqueness theorem, Electric dipole, Dipole moment, potential and electric field due to an electric dipole, Torque on an Electric dipole in an electric field, resistance, capacitance, Dielectrics, Energy in electrostatic field, boundary conditions.

Magnetostatics : Biot-Savart's law, magnetic flux density, magnetic field intensity, magnetic field due to straight wire, surface, solenoid, toroid carrying steady current Ampere's Law and its applications, Divergence and curl of Magnetic field, Comparison of magnetostatics and electrostatics, Magnetic scalar and vector potentials, Lorentz force, inductance, self and mutual inductance of solenoid, toroidal and other simple configurations, conductors, magnetic materials, Hall effect, energy in magneto static fields, boundary conditions.

Time Varying Fields: Equation of continuity, Faraday's law, Lenz's law, transformer emf and motional emf, inconsistency of Ampere's law, displacement current, electromagnetic waves and Maxwell's equations, Poynting theorem, energy in electro-magnetic fields.

Learning Resources:Text Books:

CS1101

3-0-0 (3)

Programming and Data Structures**Pre-Requisites:** None**Course Outcomes:**

CO-1	Design algorithms for solving simple mathematical problems including computing, searching and sorting.
CO-2	Compare and contrast algorithms in terms of space and time complexity to solve simple mathematical problems.
CO-3	Explore the internals of computing systems to suitably develop efficient algorithms.
CO-4	Examine the suitability of data types and structures to solve specific problems.
CO-5	Apply control structures to develop modular programs to solve mathematical problems.
CO-6	Understand the concept of Abstract Data Types and use in real time applications.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	1	1	1	2	1	-	-	-	-	-	3	3	3
CO-2	2	1	2	1	2	3	-	-	-	-	-	3	3	2
CO-3	1	2	2	2	2	1	-	-	-	-	-	3	3	2
CO-4	2	2	2	2	2	2	-	-	-	-	-	2	3	2
CO-5	2	2	3	1	2	2	-	-	-	-	-	2	3	2
CO-6	2	2	3	2	2	2	-	-	-	-	-	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Fundamentals of Computers: Components of a computers, Problems, Flowcharts, Memory, Variables, Values, Instructions, Programs.

Problem solving techniques: Algorithmic approach, characteristics of algorithm, Problem solving strategies: Top-down approach, Bottom-up approach, Number systems and data representation.

Elements of C++ programming language: Data types, constants, and variables, expressions and assignment statements, input and output statements, conditional and branch statements: If-else, Switch-case constructs, iteration statements: while, do-while, for, Arrays – Single and Multi-Dimensional Arrays, strings. Bit-wise operations.

Functions and Recursion: Modular approach for solving real time problems, user defined functions, library functions, parameter passing - call by value, call by reference, return values, passing arrays as parameters to functions Recursion.

Structures and Classes: Declaration, member variables, member functions, access modifiers, function overloading, Problems on Complex numbers, Date, Time, Large Numbers.

Pointers and Files: Introduction to pointers and dynamic allocation, String processing, File operations- create, read and write.

Searching and sorting: Linear and binary search, selection sort, bubble sort, insertion sort, merge sort, quick sort.

Data structures: Abstract Data Types (ADTs) - Stack ADT- Array-Based Implementation of Stack - Applications, Queue ADT - Array-Based Implementation – Applications.

Learning Resources:

Biology for Engineers**Pre-Requisites:** None**Course Outcomes:**

CO-1	Realize the significance of biomolecules for sustaining life
CO-2	Identify the difference between unicellular to multi-cellular organisms
CO-3	Understand heredity, variation and central dogma of life
CO-4	Apply the concepts of biology for engineering the cell

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	2	-	-	2	2	-	-	2	-	3	3	3
CO-2	3	2	2	-	-	2	-	-	-	-	-	3	3	3
CO-3	3	2	2	-	-	2	-	-	-	-	-	3	3	3
CO-4	3	3	2	2	1	2	2	1	-	2	-	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Molecules of Life: Chemical basis of life, Proteins, Nucleic acids, Carbohydrates, Lipids, Membranes and First cell, Inside the cell, Cell cycle and Division.

Information processing in living system: Central dogma, Concept of Gene, Genetic code, Transcription, Translation, Biological signal transduction, Quorum sensing and Biofilm formation.

Biomolecular machines and motors: Cytoskeletal motor proteins, ATP synthase, Cell motility.

Applied Biotechnology: Biocomputing, Synthetic biology, Biosensors, Biomedical instrumentation in disease diagnosis, Biomimicry, Biomechanics, Biomaterials, Nanobiotechnology, Industrial and Environmental Biotechnology.

Learning Resources:Text Books:

1. Quillin, Allison Scott Freeman, Kim Quillin and Lizabeth Allison, Biological Science, Pearson Education India, 2016.
2. Reinhard Renneberg, Viola Berkling and Vanya Lorch, Biotechnology for Beginners, Academic Press, 2017.

Programming and Data Structures Lab**Pre-Requisites:** CS1101**Course Outcomes:**

CO-1	Design and test programs to solve mathematical and scientific problems
CO-2	Develop and test programs using control structures
CO-3	Implement modular programs using functions
CO-4	Develop programs using classes
CO-5	Develop ADT for stack and queue applications

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	2	1	2	1	-	-	-	-	-	-	3	3
CO-2	1	1	2	1	2	2	-	-	-	-	-	-	3	3
CO-3	1	2	3	2	2	1	-	-	-	-	-	-	3	3
CO-4	2	2	2	2	2	3	-	-	-	-	-	-	2	3
CO-5	2	2	2	2	2	3	-	-	-	-	-	-	2	3

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Programs on conditional control constructs.
2. Programs on loops (while, do-while, for).
3. Programs using user defined functions and library functions.
4. Programs on arrays, matrices (single and multi-dimensional arrays).
5. Programs using pointers (int pointers, char pointers).
6. Programs on structures.
7. Programs on classes and objects.
8. Programs of Stack and Queue.

Learning Resources:**Text Books:**

1. Walter Savitch, "Problem Solving with C++", Pearson, 2014, 9th Edition.
2. Cay Horstmann, Timothy Budd, "Big C++", Wiley, 2009, 2nd Edition.
3. R.G. Dromey, "How to solve it by Computer", Pearson, 2008.
4. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C++", Pearson Education, 2006, 3rd Edition.

2nd Semester

MA1162

3-0-0 (3)

Integral Calculus, Vector Calculus and Laplace Transforms**Pre-requisites:** MA1161**Course Outcomes:**

CO-1	Analyze improper integrals for extracting certain properties of beta and gamma integrals.
CO-2	Evaluate multiple integrals in different coordinate systems.
CO-3	Apply the concepts of gradient, divergence and curl of scalar and vector point functions to formulate engineering problems.
CO-4	Convert line integrals into area integrals and surface integrals into volume integrals.
CO-5	Apply Laplace transforms to solve physical problems arising in engineering.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-2	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-3	3	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-4	3	3	1	2	1	-	-	-	-	-	-	-	2	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Integral Calculus: Improper integrals; Beta and Gamma functions, and their properties; Differentiation under integral sign, Evaluation of double and triple integrals; Areas and Volumes, Change of order of integration; Change of variables in double and triple integrals.

Vector Calculus: Scalar and vector fields; Vector differentiation; Level surfaces; Directional derivative; Gradient of a scalar field; Divergence and curl of a vector field; Laplacian operator; Parametrization of curves and surfaces; Line, surface and volume integrals; Green's theorem in a plane; Stoke's theorem; Gauss divergence theorem.

Laplace Transforms: Laplace transforms; Inverse Laplace transforms; Properties of Laplace transforms; Laplace transforms of unit step, impulse and periodic functions; Convolution theorem; Applications of Laplace transforms - solving certain initial value problems - solving system of linear differential equations - finding responses of systems to various inputs viz. sinusoidal inputs acting over a time interval, rectangular waves, impulses.

Learning Resources:Text Books:

1. George B. Thomas and Ross L. Finney, Calculus and Analytic Geometry, Pearson, 2020, 9th Edition.
2. Dennis G. Zill, Advanced Engineering Mathematics, Jones & Bartlett Learning, 2018, 6th Edition.

Reference Books:

1. Maurice D. Weir, Joel Hass and Christopher Heil, Thomas' Calculus: Early Transcendentals, Pearson, 2014, 13th Edition.

2. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley and Sons, 2015, 8th Edition.
3. R. K. Jain and S. R. K. Iyengar, Advanced Engineering Mathematics, Narosa Publishing House, 2016, 5th Edition.

CY1161

3-0-2 (4)

Engineering Chemistry

Pre-Requisites: None

Course Outcomes:

CO-1	Understand the basic concepts of chemistry relevant to materials.
CO-2	Apply electrochemical concepts for energy harvesting, conversion and storage.
CO-3	Analyze the properties of materials for various applications.
CO-4	Comprehend the concepts of instrumentation principles, Spectroscopy and procedures involved in characterization of materials.
CO-5	To analyze the metal contents from the ores by understanding the redox process.
CO-6	To determine the rate of corrosion by a redox reaction and understand the concept of adsorption.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	-	-	-	-	-	-	-	-	-	-	2	-	1
CO-2	3	-	-	-	-	-	-	-	-	-	2	2	1	1
CO-3	3	2	-	-	-	-	-	-	-	-	2	2	1	1
CO-4	3	-	-	-	-	-	-	-	-	-	2	2	1	2
CO-5	3	3	3	-	2	-	2	-	-	-	1	1	-	-
CO-6	3	3	3	-	2	2	-	-	-	1	1	-	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Chemical Kinetics and Thermodynamics: Order of a Reaction, Theories of Reaction Rates. Homogeneous and Heterogeneous Catalysis. Thermodynamic variables, Laws of Thermodynamics, Thermodynamic Relationships and Applications.

Electrochemistry and Energy Systems: Introduction to Electrochemistry, Nernst's law and its applications. Batteries, fuel cell and photo-electrochemical systems. Corrosion and its prevention.

Transition Metal Chemistry and Organometallic Chemistry: Bonding in transition metal complexes; Crystal field and MO Theories, Jahn-Teller effect. Properties of Coordination complexes; Metal Carbonyls, EAN and 18-electron rule, Ligands and hapticity; Type of reactions: Oxidative addition, Reductive elimination, Migratory insertion, Hydrogenation, Hydro formylation, Monsanto process and Wacker process.

Engineering Materials: Inorganic and Organic Semiconductors, Magnetic materials, Liquid crystals, Superconductors, Photo conducting Materials and conducting polymers. **Chromatographic and Spectroscopic Methods:** Liquid Chromatographic and Gas Chromatographic methods. UV-VIS, spectroscopy, Infrared spectroscopy, NMR spectroscopy.

List of Experiments:

1. Standardization KMnO_4 solution
2. Estimation of metal content in an ore

3. Estimation of Calcium in milk powder by complexometry
4. Extraction and identification of DNA from green peas/onions
5. Estimation of iodine in iodized common salt
6. Blue printing of an object by photochemical reaction
7. Kinetics of acid hydrolysis of methyl acetate
8. Determination of acid strength in citrus fruit
9. Verification of Beer-Lambert Law and estimation of concentration of food color
10. Evaluation of E° values of $Zn|Zn^{2+}$ and $Cu|Cu^{2+}$ Electrodes and measure the emf by constructing the Daniel cell
11. Estimation of phosphoric acid in soft drinks by pH metry
12. Separation of natural pigments from mixture using paper chromatography
13. Determination of efficiency of a corrosion inhibitor
14. Verification of Freundlich adsorption isotherm
15. Preparation of a polymer and its analysis
16. Estimation of active pharmaceutical ingredient in a drug

Learning Resources:

Text Books:

1. Shashi Chawla, A Text Book of Engineering Chemistry, Danpathrao & Co. Publications, 2007, 6th Edition.
2. Ashutosh Kar, Text Book of Engineering Chemistry, ED-Tech Publications, 2018.
3. William Kemp, Organic Spectroscopy, Macmillan Education, Limited, 2017.
4. Introductory Chemistry laboratory manual: Concepts and Critical Thinking, Charles Corwin, Pearson Education, 2012.
5. David Collins, Investigating Chemistry: Laboratory Manual, Freeman & Co., 2006.

Reference Books:

1. Michael F. Ashb, David R.H. Jones, Engineering Materials, Elsevier Science, 2012.
2. V. Raghava, Material Science and Engineering, PHI Learning, 2015.
3. J.M. Martin, Materials for Engineering, Elsevier Science, 2006.
4. Peter Atkins, Julio de Paula, James Keeler, Physical Chemistry, Oxford University Press, 2018.

2-0-2 (3)

English for Technical Communication**Pre-Requisites:** None**Course Outcomes:**

CO-1	Understand and apply principles of technical communication to interact effectively in diverse environments.
CO-2	Analyze complex technical documents to extract and synthesize key information.
CO-3	Employ reported speech, active and passive voice in engineering and scientific contexts to compile technical reports.
CO-4	Demonstrate use of English speech sounds, stress, and intonation in day-to-day situations, conversations, and interactions.
CO-5	Interpret technical data presented in the form of graphs, pie charts, and diagrams.
CO-6	Critique and provide constructive feedback on peer communication performances and written works.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	-	-	-	-	-	-	-	-	-	-	-	-	-	-
CO-2	-	-	-	-	-	-	-	-	-	-	-	-	-	-

CO-4	-	-	-	-	-	-	-	-	-	-	-	-	-	-
CO-5	-	-	-	-	-	-	-	-	-	-	-	-	-	-
CO-6	-	-	-	-	-	-	-	-	-	-	-	-	-	-

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Grammar Principles & Effective Sentence Construction: Correction of Sentences and Concord, - Vocabulary Building, - Synonyms and Antonyms, - Idioms and Phrasal Verbs: Patterns of Use and Suggestions for Effective Employment in Varied Contexts, - Technical Vocabulary (Jargons and Registers), - Strategies for Bringing Variety and Clarity in Sentences, - Removing Ambiguity, - Editing Long Sentences for Brevity and Clarity, - Reported Speech, - Contexts for Use of Reported Speech, - Impact on Audiences and Readers, - Active and Passive Voice, - Reasons for Preference for Passive Voice in Scientific English

Writing- Paragraph & Letter: Definition of Paragraph and Types, - Features of a Good Paragraph, - Unity of Theme, - Coherence, - Linking Devices, - Direction, - Patterns of Development. - Importance in the Context of Other Channels of Communication, - Qualities of Effective Letters, - Types of Letters, - Official Letters, - Letters for Various Purposes, - Letters of Application for Jobs, - Cover Letter and Resume Types, - Letters for Internship/Fellowship, - Writing Statements of Purpose (SOPs), - Examples and Exercises

Reading Techniques: Definition and Importance, - Skills and Sub-Skills of Reading, - Skimming and Scanning: Uses and Purposes, Examples and Exercises, - Reading Comprehension, - Reading Silently and with Understanding, - Process of Comprehension, - Types of Comprehension Questions

Technical Writing: Principles of a Technical Report, - Know Your Audience, Purpose, and Length of Report, - Understand the Cornerstones of a Presentation, - Define Various Purposes of Presentations and Plan the Correct Structure, - Writing Clear Sentences and Paragraphs, - Removing Jargon, Redundancy,

and Wordiness, - Kinds of Graphics and Their Messages, - Suitability for Placement in Graphic Representation, - Introduction to Basic Concepts in Research, - Abstract, Keywords, Methodology, Hypothesis, Plagiarism, Critical Reading, - Abstract Writing, - How to Read Scientific Articles, - Basics of Writing a Research Project Proposal, - Preparation and Presentation of Project Reports

Reviews: Oral and Written Review of a Chosen Novel/Play/Movie, - Review of Scientific Articles and Science Fiction, - Focus on Appropriate Vocabulary and Structure, - Use of Special Vocabulary and Idioms

Language laboratory

English Sound System -vowels, consonants, Diphthongs, phonetic symbols- using dictionary to decode phonetic transcription-- Received Pronunciation, its value and relevance- transcription.

Stress and Intonation –word and sentence stress - their role and importance in spoken English- Intonation in spoken English -definition, -use of intonation in daily life-exercises

Introducing oneself in formal and social contexts- Role plays. - their uses in developing fluency and communication in general.

Oral presentation - definition- occasions- structure- qualities of a good presentation with emphasis on body language and use of visual aids.

Listening Comprehension- Challenges in listening, good listening traits, some standard listening tests-practice and exercises.

Debate/ Group Discussions-concepts, types, Do's and don'ts- intensive practice, Guided writing practice with examples, Drafting – the mindset to avoid writer's block, Checking your own reports and presentations, Giving and receiving constructive feedback.

Learning Resources:

Text Books:

1. English for Engineers and Technologists (Combined edition, Vol. 1 and 2) Orient Blackswan 2010.
2. Ashraf, M Rizvi. Effective Technical Communication. Tata McGraw-Hill, 2006.
3. Meenakshi Raman and Sangeetha Sharma. Technical Communication: Principles and Practice 2nd Edition, Oxford University Press, 2011.
4. Tan, Zhongchao. Academic Writing for Engineering Publications: A Guide for Non-native English Speakers. Springer, 2022.

CE1164

3-0-0 (3)

Basic Engineering Mechanics**Pre-Requisites:** None**Course Outcomes:**

CO-1	Determine the resultant force and moment for a given planar and spatial force system.
CO-2	Derive the equilibrium equations for planar and spatial rigid bodies in equilibrium.
CO-3	Evaluate the friction problems for planar bodies in equilibrium.
CO-4	Analyze the kinetics and kinematic characteristics of rigid bodies in motion.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	1	1	1	1	1	1	1	1	1	1	1	1	2	1
CO-2	1	1	1	1	1	1	1	1	1	1	1	1	2	2
CO-3	2	1	1	2	2	2	2	2	2	2	2	2	2	1
CO-4	2	2	1	1	1	1	1	1	1	1	1	1	1	1

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction - Specification of force vector, Formation of Force Vectors, Moment of Force – Cross product – Problems, Resultant of a general force system in space, Degrees of freedom

- Equilibrium Equations, Kinematics – Kinetics – De' Alemberts principle, Degree of Constraints

– Free body diagrams.

Spatial Force systems - Concurrent force systems - Equilibrium equations – Problems, Problems (Vector approach) – Tension Coefficient method, Problems (Tension Coefficient method), Parallel force systems - problems, Center of Parallel force system – Problems.

Coplanar Force Systems - Introduction – Equilibrium equations – All systems, Problems on Coplanar Concurrent force system, Coplanar Parallel force system, Coplanar General force system – Point of action, Friction – Coulombs laws of dry friction – Limiting friction, Problems on Wedge friction, Belt Friction-problems.

Dynamics of Particles - Rectilinear Motion – Kinematics Problems, Kinetics – Problems, Work & Energy – Impulse Moment, Curvilinear Motion – Normal and tangential components.

Learning Resources:Text Books:

1. S. Timoshenko, D.H. Young, J.V. Rao and Sukumar Pati, Engineering Mechanics (In SI Units) McGraw Hill Publishers, 2017, 5th Edition.
2. Ferdinand P. Beer, E. Russell Johnston Jr., et al., Vector Mechanics for Engineers - Statics and Dynamics, McGraw Hill Publishers, 2019, 12th Edition.

Reference Books:

2. <https://nptel.ac.in/courses/112/106/112106180/>

Design Thinking

Pre-Requisites: None

Course Outcomes:

CO-1	Understand and address the user's needs and dissatisfaction.
CO-2	Formulate the problems to stimulate ideation.
CO-3	Ideate on problems to propose solutions by working collaboratively.
CO-4	Analyze the aspects of the proposed solutions.
CO-5	Enhance solutions based on the user's feedback.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2

CO-4	2	2	2	3	3	3	2	2	3	3	2	3	2	3
CO-5	2	2	2	3	3	3	2	2	3	3	2	3	2	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction to Engineering: "Engineering" as a vehicle for social and economic development; impact of science/engineering our day to day lives; process of engineering a product; various career options.

Introduction and identifying the need:

Identifying the needs of the society in various aspects and formulating the modifications for better performance of existing products and also conceptualizing new products.

Case studies:

- Study of transportation systems and development of Electric Vehicle.
Ex: Development in electrical motors for EVs, power controllers, automobile lighting systems, battery related aspects.
- Induction heating systems: Requirements and developments of heating systems for domestic and industrial applications.
- Lighting Systems: Development of lighting systems from incandescent bulbs to LED lighting systems.
- Renewable energy systems: Need for alternate energy sources and their development. Desirable features of energy sources and their utilization.
- Understanding the unique needs of the user - empathize - define - ideate - prototype - test. Case Studies - Develop appreciation for the design process and its application in specific settings (Guest lectures, Videos, Field visits, Interplay lectures of design-based movies).

Problem Formulation: Framing a problem statement neutrally using adequate checks. Case studies. Clarify objectives, establish requirements, identify constraints, establish steps for implementation.

Concept Generation: Generate multiple concepts,

Case studies: Examples

- Heating applications: production of heat by burning gas, coal, wood, microwave, induction heating-finding suitability of each solution for particular situation.
- Generation of Electric Power: Alternative energy solutions based on the availability

Prototyping: select from ideas and make quick prototypes (mock-ups) using available ratings of the components.

Case studies: Examples

Design of voltage regulator using Zener diode.

Design of L-C filter for rectifiers

Evaluation: Iterative process of ideation, prototyping and testing-Take the mock-ups to users for feedback and iterate process till users feel delighted.

Activities:

Some of the activities which are undertaken as a part of this course include:

- Field Visits
- Case Studies on innovation, failures etc.
- Guest lecture
- Group Discussions
- Presentation by student
- Experiential learning
- workshops

Learning Resources:

Text Books:

1. Design Thinking: A guide to creative problem solving for everyone, Andrew Pressman, Routledge Taylor and Francis group, 2019, 1st Edition.
2. Change by Design: How Design Thinking Transforms Organizations and Inspires Innovation, Tim Brown, Harper Business, 2019.
3. Engineering Design, George E. Dieter, Linda C. Schmidt, McGraw-Hill Education, 2019, 5th Edition.
4. Product design and development, Ulrich, K., Eppinger, S. and Yang, M., 2020, 7th Edition.

Electrical Circuits – I**Pre-Requisites:** None**Course Outcomes:**

CO-1	Analyze electric DC circuits and identify the dual for a given electric circuit.
CO-2	Analyze magnetic circuits, evaluate steady-state response and determine resonance characteristics of AC electric circuits.
CO-3	Formulate the dynamic response, evaluate initial conditions and assess the time-domain response of RLC circuits.
CO-4	Synthesize electrical excitations with standard signals and use Laplace Transformations and the convolution integral to solve electric circuits

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	2	1	1	1	1	1	2	3	1
CO-2	3	3	3	3	3	2	1	1	1	1	1	2	3	1
CO-3	3	3	3	3	3	2	1	1	1	1	1	2	3	1
CO-4	3	3	3	3	3	2	1	1	1	1	1	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Circuit Elements and Relations: Types of circuit components, KVL and KCL, Types of Sources and Source Transformations, Star-delta transformation, DC circuit analysis, Formation of loop and node equations, Graph of a network, Incidence matrix, Dual- networks.

Magnetic Circuits: Concept of MMF, flux and magnetic reluctance, Self and mutual inductances, Dot convention, coefficient of coupling and coupled circuits.

Steady State Analysis of Circuits for Sinusoidal Excitations: Concept of phasors, Single phase Series, Parallel, Series Parallel circuits, Concept of power factor, Solution of AC networks using mesh and nodal analysis, Phasor diagrams, 3-phase balanced and unbalanced network analysis, Neutral voltage calculations, complex power.

Resonance: Series and Parallel resonance, Bandwidth, Q-factor and selectivity.

Time Domain Analysis: Solution of network equations in time domain, Classical differential- equations approach, Initial conditions & evaluation, applications to simple RLC circuits only.

Applications of Laplace Transforms in Circuit Theory: Laplace transforms of various signals of excitation, Laplace transformed networks, determination and representation of initial conditions, Waveform synthesis, Response for impulse function and its relation to network admittance, Convolution integral and applications.

Learning Resources:Text Books:

1. M.E.Van Valken Burg, Network Analysis, Pearson Education, 2015, 3rd Edition.
2. William H. Hayt Jr., Jack E. Kemmerly, Steven M. Durbin, Engineering Circuit Analysis, Tata

McGraw Hill, 2013, 8th Edition.

3. De Carlo, Lin, Linear circuit Analysis, Oxford University Press, 2010, 2nd Edition.

Reference Books:

1. Alexander C.K., Sadiku M.N.O., Fundamentals of Electric Circuits, McGraw Hill Education, 2019, 6th Edition.
2. Joseph A. Edminister, Mahmood Nahvi, Electric Circuits, Schaum's series, McGraw-Hill Education, 2017, 5th Edition.
3. S.R. Paranjothi, Electric Circuit Analysis, New Age International Publications, 2011, 4th Edition.
4. G.K Mittal, Ravi Mittal Network Analysis, Khanna Publications, 2003, 14th Edition.
5. M.L. Soni, J.C. Gupta, A Course in Electrical Circuits Analysis, Dhanpat Rai & Co., 2001.

3rd Semester

MA1261

3-0-0 (3)

Fourier Series, Partial Differential Equations and Complex Variables**Pre-requisites:** MA1162**Course Outcomes:**

CO-1	Obtain the Fourier series for a given function
CO-2	Find the Fourier transform of a function
CO-3	Determine the solution of a PDE by variable separable method
CO-4	Understand and use of complex variables
CO-5	Evaluate a real definite integral

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	3	1	2	1	-	-	-	-	-	-	-	2	2
CO-2	3	2	1	2	1	-	-	-	-	-	-	-	2	2
CO-3	2	3	1	3	1	-	-	-	-	-	-	-	2	2
CO-4	3	2	1	2	1	-	-	-	-	-	-	-	2	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Fourier Series: Introduction and basic definitions; Expansion of a function in Fourier series for a given range; Half range sine and cosine expansions.

Partial Differential Equations: Classification of higher order partial differential equations; Method of separation of variables - Solution of one-dimensional wave equation, one-dimensional heat conduction equation and two-dimensional steady state heatconduction equation with illustrations.

Complex Variables: Analytic function – Cauchy-Riemann equations, Harmonic functions, Conjugate functions; Complex integration - Line integrals in complex plane, Cauchy's theorem (simple proof only) and Cauchy's integral formula; Taylor's and Laurent's series expansions; Zeros and singularities; Residues - Residue theorem, Use of residue theorem to evaluate the real definite integral of the type $\int_0^{2\pi} f(\cos\theta, \sin\theta)d\theta$ and $\int_{-\infty}^{\infty} f(x)dx$. Concept of conformal mapping with simple illustrations.

Learning Resources:Text Books:

1. Dennis G. Zill, Advanced Engineering Mathematics, Jones & Bartlett Learning, 2018, 6th Edition.
2. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley and Sons, 2015, 8th Edition.
3. James Ward Brown and Ruel V. Churchill, Complex Variables and Applications, McGraw Hill Education, 2009, 9th Edition

Reference Books:

1. R. K. Jain and S. R. K. Iyengar, Advanced Engineering Mathematics, Narosa Publishing House, 2016, 5th Edition.
2. M.D. Rai Singhania, Ordinary and Partial Differential Equations, S. Chand & Co., 2024, 12th Edition.

EE1201

3-0-0 (3)

Electrical Circuits – II**Pre-Requisites:** EE1104**Course Outcomes:**

CO-1	Simplify the analysis of electric circuits using network theorems
CO-2	Determine the driving point immittance of single-port networks in frequency domain using poles and zeros
CO-3	Analyze and simplify two-port networks using their properties and interrelationships
CO-4	Apply Fourier series and Fourier Transformation to analyze electric circuits with periodic and aperiodic excitations.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	2	1	1	1	1	1	3	3	2
CO-2	3	3	3	3	3	2	1	1	1	1	1	3	3	2
CO-3	3	3	3	3	3	2	1	1	1	1	1	3	3	2
CO-4	3	3	3	3	3	2	1	1	1	1	1	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Network Theorems: Superposition theorem, Reciprocity theorem, Thévenin's theorem, Norton's theorem, Maximum power transfer theorem, Millman's theorem, Tellegen's theorem.

Network Functions: Driving point impedance and transfer functions of 1-port RLC Networks, Natural frequencies of a network, Poles and Zeros of driving point impedances.

Two Port Networks: Impedance, admittance, transmission and hybrid parameters of two-port networks and inter-relationship.

Analysis of Electric Circuits with Periodic Excitation: Review of Fourier series and evaluation of Fourier coefficients, Trigonometric and complex Fourier series for repetitive waveforms, concept of harmonic power.

Applications of Fourier Transforms for Electrical Circuits: Amplitude and phase spectra, Fourier transforms and Parseval's theorem and application to network analysis with aperiodic excitations.

Learning Resources:Text Books:

1. Van Valkenburg, Network Analysis, M.E. Pearson Education; April 2019, Revised 3rd Edition.
2. N.C. Jagan, C. Lakshminarayana, Network Theory, BS publications, 2015, 3rd Edition.
3. Durgesh C. Kulshreshtha Gopal G. Bhise, Prem R. Chadha, Engineering Network Analysis and Filter Design Including Synthesis of One Port Networks, Umesh Publications; January 2012

Reference Books:

1. William H. Hayt, Jack Kemmerly, Steven M. Durbin, Engineering Circuit Analysis, McGraw Hill Education; April 2018, 9th Edition.
2. John Bird, Electrical Circuit Theory and Technology, Routledge; October 2021, 7th Edition.

Other Suggested Readings:

1. <https://www.digimat.in/nptel/courses/video/108105159/L01.html>
2. <https://www.digimat.in/nptel/courses/video/108102042/L01.html>

**Electrical Machines – I****Pre-Requisites:** None**Course Outcomes:**

CO-1	Understand operation of DC machines, single-phase and three-phase transformers and auto transformers.
CO-2	Analyze starting methods and speed control of DC machines.
CO-3	Analyze parallel operation of DC generators, single-phase and three- phase transformers
CO-4	Evaluate the performance of DC machines and transformers.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	1	1	2	1	1	1	1	1	2	3	2
CO-2	3	3	3	1	1	2	1	1	1	1	1	2	3	2
CO-3	3	3	3	2	1	2	1	1	1	1	1	2	3	2
CO-4	3	3	3	2	2	2	1	1	1	1	2	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Electromechanical Energy Conversion Principles: Principles of energy conversion, single excited and doubly excited magnetic systems, singly excited electric field systems. Constructional features of rotating electrical machines, generating EMF, emf polygon, MMF produced by distribution windings, concepts of torque production.

DC Machines: Constructional features, parts of DC machines, Simplex and multiplex lap and wave windings; Methods of excitation, characteristics of saturated and un-saturated series, shunt, cumulatively and differentially compound excited machines operating as motors and generators, applications of DC machines; Armature reaction, demagnetizing and cross magnetizing ampere-turns, compensating windings, commutation process and methods of commutation, role of inter poles and compensating winding. Problems on emf equation, torque equation and armature reaction. Principle of operation of cross-field Generators-Amplidyne-Metadyne.

Speed Control of DC Motors: Speed control of shunt & series motors, losses in DC machines and calculation of efficiency. Need for starters and Starters for DC series shunt and compound motors.

Testing of DC Motors: No-load test, load tests and regenerative tests such as Swinburne's Test, Direct load test, Hopkinson's test, Field's test and Retardation test. Calculation of efficiency based on all the above tests.

Single-Phase Two Winding Transformers: Construction, principle of operation, E.M.F. equation, phasor diagrams; Equivalent circuit, determination of equivalent circuit parameters, Predetermination of performance equivalent circuit parameters and Sumpner's test. Losses, separation of no-load losses, calculation of efficiency and regulation by direct and indirect methods, conditions for maximum efficiency. Concept of all-day efficiency. Parallel operation of transformers and Load sharing.

Auto transformer: Principle of operation, saving of copper compared to two-winding transformer and applications.

Three-Phase Transformers: Merits of three phase Transformers over three phase transformer bank Type of connections such as Delta-Delta, Delta-Star, Star-Delta, Delta-Star, V-V connection and T-T

Connections. Relation between line and phase voltages and currents, Vector Groups, use of tertiary winding. Three phase to Two phase connections and vice-versa. Problems on three phase transformers.

Learning Resources:

**Power Systems – I****Pre-Requisites:** None**Course Outcomes:**

CO-1	Understand the operation of conventional generating stations and renewable sources of electrical power.
CO-2	Analyze the power tariff methods and Power distribution systems
CO-3	Understand line supporting insulators and Underground Cables.
CO-4	Determine the parameters of transmission lines and understanding of corona

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	1	2	3	3	1	1	1	2	2	3	3
CO-2	3	3	2	2	2	3	2	1	1	1	2	2	3	3
CO-3	3	3	3	2	2	1	1	1	1	1	-	1	3	3
CO-4	3	3	3	2	3	3	2	1	1	1	2	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:****Introduction:** Typical Layout of an Electrical Power System, Present Power Scenario in India.**Generation of Electric Power Conventional Sources:** Hydro Power stations, Steam Power Plants, Nuclear Power Plants, Geothermal Power Plants and Gas Turbine Power Plants.**Renewable energy Sources:** Solar Energy, Wind Energy, Wave energy, Tidal Energy, and Fuel Cells.**Economics of Generation:** Introduction, definitions of connected load, maximum demand, demand factor, load factor, diversity factor, Load duration curve, number and size of generator units. Base load and peak load plants. Cost of electrical energy-fixed cost, running cost, Tariff on charge to customer.**AC Distribution:** Introduction, AC distribution, Single phase, 3-phase, 3 phase 4 wire system, bus bar arrangement, Selection of site and layout of substation.**Overhead Line Insulators:** Introduction, types of insulators, Potential distribution over a string of suspension insulators, Methods of equalizing the potential, testing of insulators.**Insulated Cables:** Introduction, need for insulation, insulating materials, Extra high voltage cables, grading of cables, insulation resistance of a cable, Capacitance of a single core and three core cables, Overhead lines versus underground cables, types of cables.**Transmission line sag calculation:** The catenary curve, Sag tension calculations, Supports at different levels, Stringing Chart.**Inductance and Capacitance Calculations of Transmission Lines:** Line conductors, inductance and capacitance of single phase and three phase lines with symmetrical and unsymmetrical spacing, Composite conductors-transposition, bundled conductors, and effect of earth on capacitance.**Corona and Partial Discharges:** Introduction, disruptive critical voltage, corona loss, Factors affecting corona loss and methods of reducing corona loss, Disadvantages of corona, interference between power and Communication lines. Numerical problems in corona, Introduction to partial discharges, partial discharge measurement techniques, Mitigation of partial discharges.

CO-4	1	3	3	3	1	-	-	-	3	2	1	2	2	2
CO-5	3	3	3	1	1	-	-	-	1	1	1	1	1	2
CO-6	1	1	1	1	1	-	-	-	3	1	1	1	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction to electronics: Overview of semiconductor physics, review of P-N junction operation, Characteristics of PN-Junction diode, Zener diode, LED, Diac, Triac, SCR and Solar cell. Zener diode as a voltage regulator

Diode Applications: Half wave, full wave and bridge rectifiers with filters (C, L, LC and π), Clippers and clampers.

BJT- CE, CB and CC configurations, CE Transistor Characteristics, Low frequency h- parameter model and analysis, Transistor Biasing, Stability and Thermal Runaway; Transistor as switch. **JFET** Characteristics, **MOSFET:** Enhancement and depletion mode characteristics. Differential amplifier.

Feedback Amplifiers: feedback topology-Voltage series, voltage shunt, current series, current shunt, stability, positive feedback, Barkhausen criterion, Introduction to oscillators- RC & LC oscillators and crystal oscillator.

Power Amplifiers: Classification of power amplifiers, class-A and class-B push- pull amplifiers, harmonic distortion and cross-over distortion in power amplifiers.

Integrated circuits: Introduction, Operational amplifiers ($\mu\text{A-741}$)-Ideal and practical characteristics and linear applications.

Learning Resources:Text Books:

1. Millman's Integrated Electronics, McGraw Hill Education, 1 July 2017, 2nd Edition.

2. Basic Electronics & Linear Circuits, Bhargava N. N., D C Kulshreshtha and S C Gupta, Tata McGraw Hill, 2013, 2nd Edition.

CO-4	3	3	3	2	2	2	3	2	2	2	2	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Three Phase Induction Machines: Constructional details, classification, principle of operation, production of rotating magnetic field and rating of induction motors, Phasor diagram, equivalent circuit, Pre-determination of performance from using equivalent circuit. Torque equations for starting, full load and maximum operating conditions, condition for maximum-output, slip for maximum-output, Torque-slip characteristics, losses & efficiency and applications. concepts of single phasing.

Starters-Auto transformer, star delta and rotor resistance starters. Tests on Induction Motor: No load and blocked rotor test-determination of equivalent circuit parameters, Pre-determination of performance from circle diagram.

Double cage induction motor: Construction, theory, equivalent circuit, characteristics and applications. Problems on torque calculations, losses and efficiency of squirrel cage, double cage and slip induction motors. Principle of operation of Schrage motor.

Induction Generator: Principle of operation, equivalent circuit and application.

Three Phase Synchronous Machines: Principle of operation of non-salient pole machines Constructional features, classification, ratings, winding factors, production of emf, harmonics, emf equation, Problems on emf equation, armature reaction, concepts of synchronous reactance, phasor diagrams for various operating conditions, no-load and load characteristics, open circuit and short circuit tests. Pre-determination of regulation-Synchronous impedance method, ampere-turn method, Potier triangle method and ASA and New ASA method. Problems non-salient pole synchronous generators.

Principle of operation of salient pole machines-Two reaction theory-analysis, Slip test, pre-determination of regulation of salient pole synchronous generator, phasor diagrams, analysis using phasor diagrams. power-angle characteristics, synchronization and synchronizing power. Problems salient pole synchronous generators

Parallel operation and load sharing- effect of change in excitation, effect of change in power factor, operation on infinite bus-bar, typical applications.

Synchronous Motor: Principle of operation-phasor diagrams for various operating conditions, variation of

current and power factor with excitation. Hunting and its suppression, determination and pre-determination of V and inverted V curves, methods of starting, losses and efficiency of salient and non-salient pole synchronous motors.

Power System – II**Pre-Requisites:** EE1205**Course Outcomes:**

CO-1	Understand transmission line performance and different methods of voltage control
CO-2	Apply shunt compensation techniques to control reactive power
CO-3	Understand the role of per unit quantities and travelling wave phenomenon on transmission lines
CO-4	Determine the fault currents for symmetrical and unbalanced faults

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	1	1	2	1	3	2
CO-2	3	3	3	3	3	1	1	1	1	1	2	1	3	1
CO-3	3	3	3	3	3	1	1	1	1	1	2	1	3	1
CO-4	3	3	3	3	3	1	1	1	1	1	2	1	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Performance of Lines: Representation of lines, short transmission lines, medium length lines, nominal T and PI-representations, long transmission lines. Distributed model, The equivalent circuit representation of a long Line, A, B, C, D constants, Ferranti Effect, Power flow through a transmission line, receiving end power circle diagram.

Voltage Control: Introduction methods of voltage control, shunt and series capacitors / Inductors, tap changing transformers, synchronous phase-modifiers.

Compensation in Power Systems: Introduction- Concepts of Load compensation Load ability characteristics of overhead lines uncompensated transmission line Symmetrical line Radial line with asynchronous load Compensation of lines.

Per Unit Representation of Power Systems: The one-line diagram, impedance and reactance diagrams, per unit quantities, changing the base of per unit quantities, advantages of per unit system.

Travelling Waves on Transmission Lines: Production of traveling waves, open circuited line, short circuited line, line terminated through a resistance, line connected to a cable, reflection and refraction at T-junction line terminated through a capacitance, capacitor connection at a T-junction, Attenuation of travelling waves.

Symmetrical Components: Significance of positive, negative and zero sequence components, Average 3-phase power in terms of symmetrical components, sequence impedances and sequence networks.

Fault Calculations: Fault calculations, sequence network equations, single line to ground fault, line to line fault, double line to ground fault, three phase fault, faults on power systems, and faults with fault impedance, reactors and their location, short circuit capacity of a bus.

Learning Resources:**Text Books**

1. John J.Grainger, W.D. Stevenson: Power System Analysis, McGrawHill International (Indian Edition) 2017.

2. C.L. Wadhwa: Electrical Power Systems New Age International Pub. Co., 2016, 7th Edition.

Reference Books:

1. Hadi Saadat: Power System Analysis Tata Mc Graw Hill Pub.Co., 2011, 4th Edition.

3. W.D. Stevenson: Elements of Power system Analysis, McGraw Hill International, 2015, 4th Edition.
4. D. Das, Electrical Power Systems New Age International Pub. Co., 2016, 3th Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/102/108102047/>
2. <https://nptel.ac.in/courses/108/107/108107112/>

Control Systems

Pre-Requisites: None

Course Outcomes:

CO-1	Understand and analyse electrical & electro-mechanical systems using transfer function approach
CO-2	Determine transient and steady-state behaviour of dynamic systems.
CO-3	Determine absolute and relative stability of dynamic systems using time & frequency domain analyses
CO-4	Design compensators for linear control systems to derive the specified steady-state and dynamic responses

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: System, control system, types of control systems, Transfer Function, open-loop and closed loop systems, types of feedback, feedback and its effects.

Modelling of Physical Systems: Mathematical modelling of Electrical and Electro- mechanical elements, D.C. motors. Block diagram illustration.

Techniques to Develop Transfer Function of Systems: Introduction, Block diagram reduction technique and signal flow graph, Mason's gain formula.

Time Domain Analysis of Control Systems: Introduction- time domain indices, steady state error constants, concept of BIBO stability, absolute stability. Routh- Hurwitz Criterion.

Root Locus Techniques: Introduction, Root loci theory, Application to system stability analysis. Illustration of the effect of addition of zero and pole.

Frequency Domain Analysis of Control Systems: Introduction, Bode plots, Frequency domain indices, application of Bode plots, Polar plots. P, PI & PID controllers.

State-Space Representation of Dynamic Systems: State-Variables, State-Variable representation of Electrical Systems.

Learning Resources:

Text Books:

1. Norman S. Nise, Control Systems Engineering, Willey Publications, 2019, 7th Edition.
2. I.J. Nagarath & M. Gopal: Control Systems Engineering, New Age Pub. Co, 2017, 6th Edition.

Reference Books:

1. Katsuhiko Ogata, Modern Control Engineering, Pearson Education India, 2015, 5th Edition.

2. Richard C. Dorf, Robert H. Bishop, Modern Control Systems, Prentice Hall, 2015, 13th Edition.
3. K. R. Varmah, Control Systems, McGraw Hill Education, 2010.
4. Dhanesh N Manik, Control Systems, Cengage Learning, 2012, 1st Edition.
5. B.C.Kuo: Automatic Control Systems, Wiley, 2014, 9th Edition.

Other Suggested Readings:

1. <https://www.controleng.com>
2. <https://www.mathworks.com>
3. <https://nptel.ac.in/courses/108/102/108102043/>

Electrical Measurements and Instrumentation

Pre-Requisites: None

Course Outcomes:

CO-1	Understand the principle and performance of PMMC, MI, dynamometer type & induction type measuring instruments.
CO-2	Determine the circuit parameters using AC and DC bridges
CO-3	Compute and analyze the errors in CTs and PTs
CO-4	Design sensors and analyze the operation of electronic measuring instruments

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	2	1	1	1	1	1	2	2	3	3	3
CO-2	3	3	3	3	1	1	1	1	2	1	1	1	3	3
CO-3	3	3	3	3	2	2	2	1	1	1	1	1	3	3
CO-4	3	3	3	3	1	1	2	1	2	1	1	1	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: Measurement standards and units, definitions, classification of electromechanical and digital instruments.

Electromechanical meters: PMMC, MI, electro-dynamometer and induction-type instruments: construction, working, types, torque equation, range extension, errors, advantages and disadvantages, active- and reactive- power measurements in single-phase and three-phase circuits.

DC & AC bridges: Introduction to bridge circuits; Wheatstone bridge, Kelvin's bridge, megger, loss of charge method; Maxwell's bridges, Anderson bridge, Schering bridge, De-Sauty bridge, Wien bridge; limitations and applications.

Instrument Transformers: Construction, types, working, equivalent circuit, errors, phasor diagram, testing and applications.

Transducers: Classification, types, thermistor, RTD, thermocouple, LVDT, strain gauge, piezoelectric transducers, digital shaft encoders, tachometer, Hall effect sensors; applications.

Electronic instruments: Introduction to digital instruments, structure, types, sensitivity and detection of signals; digital voltmeters, dual-trace and dual-beam CRO, measurement of voltage and frequency, Lissajous patterns, wave analyzers, harmonic distortion analyzer, LCR meter and Q-meter.

Smart instruments: Intelligent transducer, self-diagnosis and remote calibration features, HART communication, MEMS, non-linearity compensation; smart energy meter components, working principle; Automatic Meter Reading (AMR), Advanced Metering Infrastructure (AMI) environments.

Learning Resources:

Electrical Measurements and Instrumentation Lab**Pre-Requisites:** None**Course Outcomes:**

CO-1	Demonstrate the measurement of current, voltage, power and frequency using analog instruments.
CO-2	Measure the resistance, inductance, and capacitance using electrical bridges.
CO-3	Determine the errors in instrument transformers.
CO-4	Measure temperature, displacement, pressure using suitable transducer.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	2	1	1	1	1	1	2	2	3	3	3
CO-2	3	3	3	3	1	1	1	1	2	1	1	1	3	3
CO-3	3	3	3	3	2	2	2	1	1	1	1	1	3	3
CO-4	3	3	3	3	1	1	2	1	2	1	1	1	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Study and observe the oscilloscope as a test and measuring instrument. (Test the resistors, capacitors, diodes, transistors, measure AC/DC voltages, frequency, phase and study the Lissajous patterns).
2. Plot the B-H curve of a magnetic specimen to obtain its hysteresis loss and calculate its Steinmetz's constant & co-efficient.
3. Calibration of 1- Φ induction-type energy meter by phantom loading.
4. Low resistance measurement using Kelvin double bridge.
5. Measurement of inductance using Maxwell's bridges and Anderson bridge.
6. Measurement of capacitance using Schering bridge and De-Sauty bridge.
7. Frequency measurement using Wein bridge.
8. Determination of ratio & phase error in a potential transformer.
9. Determination of ratio & phase error in a current transformer.
10. Temperature measurement using RTD, thermistor and thermocouple.
11. Measurement of pressure and weight using piezoelectric transducer.
12. Measurement of power factor using two-watt meter method.
13. Active power measurement in a balanced 3- Φ system using two wattmeter method.
14. Reactive power measurement in a balanced 3- Φ system using single wattmeter method.

EC1262

3-0-0 (3)

Switching Theory and Logic Design

Pre-Requisites: EC1261**Course Outcomes:**

CO-1	Examine the structure of number systems and perform the conversion among different number systems deployed in communication and computer systems.
CO-2	Illustrate reduction of logical expressions using Boolean algebra, <i>k</i> -map and tabulation method
CO-3	Understand Combinational Circuits for given Application
CO-4	Design and analyze synchronous and asynchronous sequential circuits using flip-flops
CO-5	Implement combinational logic circuits using Programmable logic devices
CO-6	Understand conversion of signals from analog to digital and digital to analog.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	1	1	1	1	1	1	1	1	1	1	3	1
CO-2	2	2	1	1	1	1	1	1	1	1	1	1	3	1
CO-3	2	2	1	1	1	1	1	1	1	1	1	1	3	1
CO-4	2	2	3	1	1	1	1	1	1	1	1	1	3	2
CO-5	2	2		1	1	1	1	1	1	1	1	1	3	2
CO-6	2	2	3	1	1	1	1	1	1	1	1	1	3	1

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Number System and Codes: Analog versus digital, merits of digital system, number systems, base conversions, complements of numbers weighted and unweighted codes and error detecting and correcting codes, Alpha numeric code (ASCII), Error detecting and correcting codes.

Switching algebra and Switching functions: Boolean algebra, postulates, theorems and switching algebra, completely and incompletely specified switching functions, Representation of Boolean functions in sum of products form and product of sums form, minimization of Boolean functions using Karnaugh map and Quine Mc-Cluskey methods. Problem solving.

Combinational logic circuits: Logic gates, Logic gates operation using discrete components, Universal Logic gates, Logic design of combinational circuits: adders, Code converters, Comparators, multiplexers, de-multiplexers, encoders, decoders, buffers, tri-state buffers.

Logic Families: Transistor as an inverter/switch. Classification of logic families and their developments. TTL NAND gate analysis, ECL and CMOS logic family. Comparison TTL CMOS and ECL logic families.

Sequential Circuits & Applications: RS Flip flop, Clocked RS flip-flop, JK flip-flop, T-flip-flop, JK flip-flops and M/S JK flip flop, Conversion of flip-flops. Buffer Register, Controlled buffer register, Shift Registers (Left shift and Right shift register), Universal shift register: SISO, SIPO, PISO, PIPO, Ring counter and twisted ring counter. Design of Asynchronous and Synchronous counters. Synthesis of Sequential circuits- FSM, Moore and Mealy machines.

Learning Resources:

Text Books:

1. Donald P. Leach, Malvino and Saha Digital Principles and Applications (SIE), McGraw Hill Education, 2014, 8th Edition.
2. ZviKohavi, Switching and Finite Automata Theory, McGraw-Hill, 2017, 8th Edition.

Reference Books:

1. Herbert Taub, Donald Schilling, Digital integrated electronics, McGraw-Hill, 2017.
2. Robert L.Morris and John R.Miller MH, Designing with TTL integrated circuits, 1975.

2. https://www.tutorialspoint.com/digital_circuits/digital_circuits_flip_flops.htm

**Electrical Machines Lab – I****Pre-Requisites:** EE1203**Course Outcomes:**

CO-1	Select apparatus based on the ratings of DC machines and transformers
CO-2	Determine equivalent circuit parameters and performance of transformers
CO-3	Evaluate the performance of DC machines and transformers by direct and indirect loading methods
CO-4	Select braking and speed control methods of DC machines

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	2	2	2	1	2	3	1	2	3	1
CO-2	3	2	1	2	1	2	1	1	2	3	1	2	3	1
CO-3	3	3	2	1	2	2	1	1	2	3	1	2	3	1
CO-4	3	2	3	1	1	2	2	1	2	3	1	2	3	1

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Determination of open circuit characteristics (OCC) of a separately-excited DC shunt generator.
2. Determination of load characteristics of self-excited DC generator.
3. Speed control of DC shunt motor using armature voltage and field current control methods.
4. Determination of performance characteristics of DC Shunt motor using brake test.
5. Predetermination of efficiency of a DC shunt motor using Swinburne's test.
6. Retardation test on DC shunt motor to determine the moment of inertia.
7. Field test on two identical DC series machines.
8. Hopkinson test on DC shunt machines.
9. Predetermination of efficiency of a single phase transformer using open circuit (OC) and short circuit (SC) test.
10. Determination of efficiency and regulation of a single phase transformer using load test.
11. Determination of efficiency of a transformer using Sumpner's test.
12. Separation of no load losses of a single phase transformer.
13. Scott connection of single phase transformers.

Learning Resources:Text Books:

1. D.P. Kothari, B.S. Umre, Laboratory manual for Electrical Machines, Wiley Publishers, 2020, 2nd Edition.
2. D.K. Chaturvedi, Electrical Machines Lab Manual with Matlab, Laxmi Publications, 2020, 1st Edition.

EC1264

0-1-2 (2)

IC Applications Lab**Pre-Requisites:** EC1262**Course Outcomes:**

CO-1	Understand, analyze and design applications using Op.Amp IC μ A741.
CO-2	Design and construct waveform generation circuits
CO-3	Verify the functionality of combinational and sequential circuit ICs.
CO-4	Design combinational and sequential circuits using Digital ICs

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	2	1	1	1	1	1	1	3	3	1
CO-2	3	3	3	2	2	1	1	1	1	1	1	3	3	1
CO-3	3	3	3	2	3	1	1	1	1	1	1	3	3	1
CO-4	3	3	3	2	3	1	1	1	1	1	1	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

- Study and Operation of IC testers, pulse generator and digital trainer.
- Measurement of Op Amp parameters:
Aim: To measure i) Input offset voltage ii) Bias current & Input Offset current iii) CMRR iv) Slew rate v) Open loop gain vi) Input impedance.
- Op Amplifier applications
Aim: Design and implementation of i) Adder and difference amplifier using μ A741 ii) Instrumentation amplifier using LM 321
- Op Amp Multivibrators.
Aim: Design and implementation of monostable and astable multivibrators
- 555 Timer as Multivibrators
Aim: Design and implementation of Monostable and astable multivibrators
- Linear Voltage Regulator
Aim: Design and implementation of Voltage Regulator using 723IC
- Combinational Logic Circuits
Aim: Design and implementation of adders, subtractors & code converters using gate ICs
- Characteristics of TTL NAND gate:
Aim: To obtain (i) Sourcing (ii) Sinking (iii) Transfer characteristics of 7400
- Adders, Multiplexers and Decoders
Aim: Implementation of i) 4-bit Adder/ Subtractor using 7483 and 7486
Full adder and Full subtractor using Mux 74153 and 7404
Full adder and Full subtractor using decoder 74138
- Study of Flip-flops
To study functioning of 7474, 7476
To implement a 4-bit buffer and 4-bit shift register using 7474 ICs

To design and implement synchronous counter using 7476ICs

11. Applications of Counter ICs Aim: To implement various modes of counters using 7490, 7492 and 7493

To implement up/down counters using 74190/74192/74193

12. Applications of Registers

Aim: i) To implement a 4-bit shift register, self-generating ring counter and Johnson counter using 74195/7495/7498/74198.

Learning Resources:

Text Books:

1. Donald P. Leach, Malvino and Saha Digital Principles and Applications (SIE), McGraw Hill Education, 2014, 8th Edition.
2. ZviKohavi, Switching and Finite Automata Theory, McGraw-Hill, 2017, 8th Edition.

2. https://www.tutorialspoint.com/digital_circuits/digital_circuits_flip_flops.htm

5th Semester

**Power Electronics****Pre-Requisites:** None**Course Outcomes:**

CO-1	Select switching devices for a given power converter.
CO-2	Evaluate the performance of phase-controlled rectifiers.
CO-3	Design DC-DC converter for a given performance
CO-4	Analyze and evaluate the operation of Inverters and ac voltage controllers

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-2	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-3	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-4	3	3	3	3	3	3	3	1	2	1	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction: Concept of power electronics, scope and applications, types of power converters, power semiconductor switches and their V-I characteristics Diodes, SCR, TRIAC, power MOSFET, IGBT. Thyristor ratings and protection, methods of SCR commutation, gate drive circuits, switching and conduction losses in a generic power semiconductor device. Wide bandgap switching devices.

Phase-Controlled Rectifiers: Principles of single-phase fully-controlled converter with R, RL, and RLE load, Principles of single-phase half-controlled converter with RL and RLE load, Principles of three-phase fully-controlled converter operation with RLE load, Effect of load and source inductances, Single phase and Three phase dual converters

DC-DC Converters: Introduction, Basic principles of step-down and step-up operation, chopper classification study of Buck, Boost and Buck-Boost regulators, Continuous and Discontinuous mode of operation, Introduction to forward and flyback converters.

Inverters: Introduction, principle of operation, performance parameters, single phase bridge inverters with R, RL and RLC loads, 3-phase bridge inverters- 180 and 120 degrees mode of operation, Voltage control of single phase inverters –single pulse width modulation, multiple pulse width modulation, sinusoidal pulse width modulation.

A.C. Voltage Controllers: Introduction, principle of operation of single phase and three phase voltage controllers for R, R-L & R-L-E loads and its applications.

Learning Resources:Text Books:

1. Muhammad H. Rashid, Power Electronics - Circuits, Devices and Applications, Pearson, 2018, 4th Edition.
2. Mohan Undeland Robin, Power Electronics - Converters, Applications and Design, John Wiley & Sons, 2002, 3rd Edition.

Reference Books:

1. P.S.Bimbhra, Power Electronics, Khanna Publishers, 2016, 6th Edition.

CO-4	3	3	3	3	3	3	2	1	3	2	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction: Overview of the course, Functional elements of a microprocessor, overview of architecture of a general purpose microprocessor.

8086 Microprocessor: Internal Architecture of 8086, BIU and EU- Registers in of 8086- Memory segmentation- Addressing modes-register related and memory related- Instruction formats, Instruction set of 8086- Assembler directives, Tutorial- Problems on assembly language programming- Pin diagram of 8086 , Modes of operation- Timing diagrams of typical instructions- Fundamentals of I/O data transfer, Polling, Handshaking, interrupts-Steps in an interrupt process, Interrupt structure in 8086- Fundamentals of interfacing peripheral chips, Interfacing memory & I/O devices- Interfacing I/O- Programmable peripheral interface-8255, Modes of operation of 8255, Interfacing examples with 8255- Interfacing 8254 timer, Interfacing Digital to analog converters, Analog to Digital converters- Interfacing USART 8251.

8051 Microcontroller: 8051 architecture, memory organization, addressing modes & port structure, external memory access, counters and timers, Interrupts, serial communication, Microcontroller instructions -, moving data, logical operations, arithmetic operations, jump and call instructions – subroutines - Interrupts and returns. Microcontroller programming – Assembly Language Programming, timer and counter programming, Interrupt programming- Interfacing examples.

PIC Microcontrollers (PIC 18F): Introduction - Architecture – Memory organization – Assembly Language Programming and programming with Embedded C – simulation using Integrated Development Environment (IDE) - Programming of I/O ports – Addressing modes.

Bank switching – Look-up Table and Table processing – Timers and its programming – Interrupt sources-analog-to-digital converter (ADC) module-Brown-out-reset (BOR), Power- on-reset (POR),Capture/Compare/PWM modules, USART, Master Synchronous Serial Port (MSSP) Module - Interfacing examples.

List of Lab Experiments:

1. 8086 Assembly language programs and coding of instructions.
2. Interfacing of 8255 PPI and applications with 8086Microprocessor
3. Interfacing of 8254 and serial data transfer using 8251 USART with 8086Microprocessor.
4. Programming exercises on 8051 and PIC Microcontroller
5. Interface I/O devices with and handle external interrupts using 8051microcontroller
6. PIC Serial Communication using Serial Peripheral Interface (SPI) and Interface PIC 18F45K22 Microcontroller with an LCD using PIC microcontrollers simulator (IDE)

Learning Resources:

EE1305

3-0-0 (3)

Power System Operation and Control**Pre-Requisites:** EE1204**Course Outcomes:**

CO-1	Understand load flow methods, economic operation and load frequency control of power system.
CO-2	Analyze the functions of Energy Management System (EMS).
CO-3	Determine the stability of power system.
CO-4	Understand power system deregulation and smart grid technologies.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	2	1	1	3	1	2	2	3	2
CO-2	3	3	3	2	3	2	1	1	1	1	3	2	3	2
CO-3	3	3	3	3	3	3	1	1	2	1	1	2	3	2
CO-4	3	3	3	1	3	3	1	1	1	1	3	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Load Flow Studies: Introduction, Bus classification -Nodal admittance matrix - Load flow equations - Iterative methods - Gauss and Gauss Seidel Methods, Newton-Raphson Method- Fast Decoupled method - Merits and demerits of the above methods - System data for load flow study. Distribution Load Flow Analysis, Backward-forward load flow, direct approach based load flow analysis.

Control of Real-Power: Effect of synchronous machine excitation-Power angle of a synchronous machine-Specification of bus voltages, control by transformers.

Economic Operation of Power Systems: Distribution of load between units within a plant Transmission loss as a function of plant generation, Calculation of loss coefficients - Distribution of load between plants.

Load Frequency Control: Introduction, load frequency problem-Megawatt frequency (or P-f control channel, MVAR- voltages (or Q-V) control channel-Dynamic interaction between P-f and Q-V loops. Mathematical model of speed-governing system-Turbine models, division of power system into control areas, P-f control of single control area (the uncontrolled and controlled cases)-P-f control of two area systems (the uncontrolled cases and controlled cases)

Power System Stability: The stability problem- Steady state stability, transient stability and Dynamic stability-Swing equation. Equal area criterion of stability-Applications of Equal area criterion, Step-by-step solution of swing equation-Factors affecting transient stability, Methods to improve steady state and Transient stability, Introduction to voltage stability

Power System Deregulation (Qualitative Treatment Only): Introduction - Power system restructuring models- responsibilities and functions of independent system operator (ISO), Ancillary Services.

Learning Resources:Text Books:

1. C.L. Wadhwa, Electrical Power Systems, 3rd Edition, New Age International Publishing Co., 2001.
2. D.P. Kothari and I. J. Nagrath, Modern Power System Analysis, Tata McGraw Hill Education Private Limited, 2011, 4th Edition.

Business Essentials for Engineers**Pre-Requisites:** None**Course Outcomes:**

CO-1	Understand the basic concepts of management and its functions
CO-2	Apply the functions of management for taking effective decisions.
CO-3	Analyze factors influencing management in competitive business environment
CO-4	Identify business opportunities and challenges
CO-5	Integrate functions of management for building a better organization.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	-	-	-	-	-	-	-	-	3	-	3	3	-	-
CO-2	-	-	-	-	-	-	-	-	2	-	3	3	-	-
CO-3	-	-	-	-	-	-	-	-	1	-	3	3	-	-
CO-4	-	-	-	-	-	-	-	-	1	-	2	2	-	-
CO-5	-	-	-	-	-	-	-	-	1	-	1	2	-	-

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction: The evolution of management theory, Business functions and their roles, Organizations and types, Levels of management, Types of markets and pillars of management- planning, organizing, leading and controlling.

People Management: Catalysts for organizational performance – Motivation & Leadership, Organization culture & Change, Human resource functions in a dynamic business environment and evolving dynamics in Industrial Relations.

Marketing Management: Nature and scope of marketing, Company's orientation towards market place, Importance of marketing concept, Marketing environment, 4p's of marketing, market segmentation, target market selection and positioning.

Financial Management: Financial accounting, Financial statements and analysis for decisions, Financial planning, Capital, Working capital, Capital structure and Sources of corporate finance, Investment decisions.

Project Management: Project screening and Selection, Techniques, Structuring concepts and Tools (WBS, OBS, and LRC, RACE). Project life cycle analysis. Appraisal of a project, Project Planning: Techniques, CPM, PERT- GAN - Time Cost Trade-off and Crashing Procedure, Project Monitoring: Monitoring Techniques and time control System, EVA Analysis

Quality & Strategy: Quality, Principles, Quality Awards, Standards of Quality culture, Quality metrics programs, Strategy, Vision and Mission, Porter's 5-forces, McKinsey's 7S Model, BCG Matrix, Competitive advantage - Value chain analysis & Resource based view.

**Electrical Machines Lab – II****Pre-Requisites:** EE1202**Course Outcomes:**

CO-1	Determine the performance of induction motor by direct and indirect loading methods.
CO-2	Evaluate the parameters and performance of induction motor and synchronous motor.
CO-3	Determine the V and inverted V curves of synchronous motor.
CO-4	Determine the performance characteristics of Schrage motor.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	2	2	2	1	2	3	1	2	3	1
CO-2	3	2	1	2	1	2	1	1	2	3	1	2	3	1
CO-3	3	3	2	1	2	2	1	1	2	3	1	2	3	1
CO-4	3	2	3	1	1	2	2	1	2	3	1	2	3	1

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Predetermination of performance of 3-phase induction motor using Equivalent Circuit
2. Predetermination of performance of 3-phase induction motor using Circle Diagram
3. Brake test on 3-phase induction motor
4. Single phase operation of 3-phase induction motor
5. Speed control of 3-phase induction motor
6. Predetermination of Regulation of 3-phase alternator by E.M.F.method
7. Predetermination of Regulation of 3-phase alternator by Z.P.F.method
8. Predetermination of Regulation of Salient pole synchronous Machine using Slip Test
9. Parallel operation of alternators
10. Determination of V and inverted V curves of 3-phase synchronous machine
11. Characteristics of 3-phase Schrage motor
12. Determination of equivalent circuit parameters of single phase induction motor
13. Determination of performance of induction generator

Learning Resources:Text Books:

1. D.P. Kothari, B.S. Umre, Laboratory manual for Electrical Machines, Wiley Publishers, 2nd Edition, 2020.
2. D.K. Chaturvedi, Electrical Machines Lab Manual with MATLAB, Laxmi Publications, 1st Edition, 2020.

Control Systems Lab

Pre-Requisites: EE1206

Course Outcomes:

CO-1	Demonstrate the implementation PI/PID controllers for DC servo motor based position control applications.
CO-2	Perform the time domain and frequency domain analysis of the given linear systems
CO-3	Design and implement the State feedback controller for unstable mechatronic system
CO-4	Analyze and design the controllers using MATLAB for the given linear system

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	2	3	1	1	1	2	1	1	2	3	2
CO-2	3	3	2	2	2	1	1	1	2	1	1	2	3	2
CO-3	3	3	3	2	3	1	1	1	2	1	1	3	3	3
CO-4	3	3	3	2	3	1	1	1	3	1	1	3	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

List of Experiments:

1. Time domain analysis of first and second order systems (Hardware)
2. Frequency-response characteristics of second order system (Hardware)
3. Performance assessment of P, PI & PID controller for different linear systems
4. Implementation of the lag and lead compensator networks for linear system
5. Design of Position control system for DC Servo motor using PV controller (Hardware)
6. Pole placement approach to control the position of Industrial plant Emulator hardware system.
7. Tuning of PI/PID Controller for Thermal hardware system.
8. Control system design for unstable Magnetic levitation system (Hardware).
9. Synthesis of Disturbance rejection controller for Rotary flexible link system (Hardware)
10. Stabilization of Rotary Inverted Pendulum using state feedback controller (Hardware)
11. Stability analysis and controller design for linear systems using MATLAB

Learning Resources:

Text Books:

1. Richard C. Dorf, Robert H. Bishop, Modern Control Systems, Prentice Hall, 2015, 13th Edition.
2. B.C.Kuo: Automatic Control Systems, Wiley, 2014, 9th Edition.

**Fractal Course – I****Pre-Requisites:** None**Course Outcomes:**

CO-1	Acquire an in-depth understanding of the specific topic covered in the course, which could range from a particular technology, method, or recent advancement in Electrical Engineering.
CO-2	Develop hands-on skills relevant to the course topic, such as using specific tools, software, or techniques.
CO-3	Apply learned concepts to solve focused and practical engineering problems related to the course content.
CO-4	Understand the interdisciplinary aspects and applications of the course to solve real-world industrial problems.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	-	-	-	-	-	-	-	-	-	2	2
CO-2	-	-	-	2	2	3	3	-	-	-	-	-	3	2
CO-3	-	-	3	2	2	-	-	-	-	-	-	-	3	2
CO-4	-	-	-	-	-	-	-	-	1	3	-	2	2	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

This one-week course aims to bridge the gap between academic learning and industry application / latest research developments, providing students with a comprehensive understanding of the Electrical engineering field and enhancing their readiness for professional careers.

- Structure: Lectures delivered by an expert from the Electrical Engineering Industry / R&D Organization / Academic Institution (SPARK Collaborators / Foreign Subject Experts in GIAN program / Adjunct Professors from Foreign Universities @ NITW).
- Content: Topics covering current practices, case studies, technological advancements, and future trends.
- Interactive Sessions: Q&A sessions, discussions, and case study analyses to foster interaction between students and the subject expert.
- Assessment: the mode of assessment (Participation, a short reflective report / a presentation summarizing key takeaways from the lectures / Objective or descriptive type exam, etc.) will be decided by the subject expert

Learning Resources:

- Course material and any learning resources suggested by the experts

6th Semester

EE1302

3-0-0 (3)

Power System Protection

Pre-Requisites: EE1204**Course Outcomes:**

CO-1	Evaluate electromagnetic, static and microprocessor based relays
CO-2	Design protection schemes for power systems.
CO-3	Select relay settings for overcurrent and distance relays.
CO-4	Analyze quenching mechanisms used in air, oil, SF ₆ and vacuum circuit breakers

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	2	3	2	1	1	2	1	2	1	3	3
CO-2	3	3	3	3	3	2	1	1	2	1	3	1	3	3
CO-3	3	3	2	2	2	2	1	1	2	1	2	1	2	1
CO-4	3	3	2	2	2	2	1	1	2	1	2	1	2	1

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:****Introduction:** Need for power system protection, effects of faults, Measures to reduce the impact of faults,**Fuses:** Introduction, fuse characteristics, types of fuses, application of HRC fuses, discrimination**Overvoltage Protection and Insulation Coordination:** Over voltage due to arcing ground and Peterson coil, Lightning Arresters, Insulation Coordination**Protective Relays:** Evolution of protective relays, zones of protection, primary and backup protection, essential qualities of protection, classification of protective relays and schemes, current transformers, potential transformers, basic relay terminology.**Operating Principles of Protective Relays:** Electromagnetic relays, thermal relays, static relays, Amplitude and Phase comparators, Duality between AC and PC, Static amplitude comparator, integrating and instantaneous comparators, static phase comparators, coincidence type of phase comparator, introduction to microprocessor based protective relays.**Over-current Protection:** Time-current characteristics, current setting, over current protective schemes, directional relay, protection of parallel feeders, protection of ring mains, Phase fault and earth fault protection, Combined earth fault and phase fault protective scheme, Directional earth fault relay.**Distance Protection:** Impedance relay, reactance relay, MHO relay, input quantities for various types of distance relays, Effect of arc resistance, Effect of power swings, effect of line length and source impedance on the performance of distance relays, selection of distance relays, MHO relay with blinders, Reduction of measuring units, switched distance schemes.**Pilot Relaying Schemes:** Wire Pilot protection, Carrier current protection. AC Machines and Bus Zone Protection: Protection of Generators, Protection of transformers, Bus-zone protection, frame leakage protection.

Static Relays: Static over current relays, static directional relay, static differential relay, static distance relays, and Multi input comparators, concept of Quadrilateral and Elliptical relay characteristics. Microprocessor Based Relays: Over current relays, directional relays, distance relays.

Circuit Breakers: Introduction, arcing in circuit breakers, arc interruption theories, re-striking and recovery voltage, resistance switching, current chopping, interruption of capacitive current, oil circuit breaker, air blast circuit breakers, SF6 circuit breaker, operating mechanism, selection of circuit breakers, high voltage DC breakers, ratings of circuit breakers, testing of circuit breakers.

Learning Resources:

Text Books:

1. Badri ram and D.N. Vishwakarma, Power System Protection and Switchgear, TMH, 2001.
2. L. Singh, Digital Protection: Protective relaying from Electromechanical to Microprocessors New Age International, 1994.
3. U.A. Bakshi, M. V. Bakshi, Switchgear and Protection, Technical Publications, 2009.

Reference Books:

1. C. Russel Mason, The art and science of protective relaying, Wiley Eastern, 1995

Other Suggested Readings:

Digital Signal Processing

Pre-Requisites: None**Course Outcomes:**

CO-1	Apply the sampling theorem and its importance in signal conversion.
CO-2	Analyse the frequency response of discrete systems using Fourier transforms
CO-3	Synthesis and realize the Different Digital FIR and IIR filters
CO-4	Apply TMS320LF2407 digital signal processor for filter applications

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-2	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-3	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-4	3	3	3	3	3	3	3	1	2	1	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Signals and Systems: Introduction to digital systems, Definition of signal and system, Shannon's sampling theorem, Types of Discrete-Time signals, Aliasing Phenomena, Impulse Response, Linear Time Invariant systems, Linear convolution, Difference Equations, Solving Difference equations.

Fourier analysis and Z-Transform: Definition of Continuous Time & Discrete Time Fourier Series and Fourier Transform (CTFS, CTFT, DTFS, DTFT), DTFT Properties and its application. Definition of two-sided Z-transform, Properties of Z-Transform, Convolution using Z-transform, One-sided Z-Transform, Transform Analysis of Systems, System Function, Systems with Linear Phase.

Synthesis of Digital Filters and its realization: Basics of Digital Filters: Low pass, High pass, Band pass, Band Stop, Finite Impulse response (FIR) filter- Synthesis of FIR Filter using DTFT approach-Infinite impulse response (IIR) filter; Butterworth filter, Chebyshev filter, Bilinear Transformation, Realization of Digital Filters: Direct Systems, Indirect Systems, Cascade Structure, Transposed/Lattice Structures, Parallel structures for IIR and FIR systems

Fast Fourier Transform (FFT): Definition of Discrete Fourier and Fast Fourier Transforms, DFT properties, Sampling the DTFT, Linear convolution using DFT, Radix-2 FFT algorithms, decimation in time, decimation in frequency.

TMS320LF2407 Digital Signal Processor: Architecture, addressing modes, Instruction set and simple applications, Arithmetic operations, Circular Convolution.

Learning Resources:Text Books:

1. J.G. Proakis, D.K Manolakis, Digital signal processing: Principles, algorithms and applications, Pearson Education, 2020, 4th Edition.
2. T. Holton, Digital Signal Processing: Principles and Applications, Cambridge University Press, 2021, 1st Edition.

Reference Books:

- 1 S.K. Mitra, Digital signal processing: A Computer Based Approach, McGraw Hill Education, 2013, 4th Edition.
- 2 2013, 4th Edition.
- 3 Alan V Oppenheim and Ronald W. Schafer, Digital signal processing, Pearson Education India, 2015, 1st Edition.
- 4 S Salivahanan, Ganapriya, Digital signal processing, Tata McGraw Hill, 2019, 4th Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/106/108106151/>
2. <https://nptel.ac.in/courses/108/105/108105055/>

EE1306

0-1-4 (3)

Product Development

Pre-Requisites: None

Course Outcomes:

CO-1	Develop electric equivalent model for physical systems.
CO-2	Express Product Design Ideas such as MATLAB/Simulink and PSpice
CO-3	Evaluate the performance of the model
CO-4	Develop and evaluate prototype of the product
CO-5	Improve the product based on testing with user feedback

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	2	2	3	3	3	2	2	3	3	2	3	3	2
CO-2	2	2	2	3	3	3	2	2	3	3	2	3	3	2
CO-3	2	2	2	3	3	3	2	2	3	3	2	3	3	2
CO-4	2	2	2	3	3	3	2	2	3	3	2	3	3	2
CO-5	2	2	2	3	3	3	2	2	3	3	2	3	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Design Thinking process for Product Development: Review of five step design thinking process of Empathize- Define- Ideate- Prototype- Test.

Project Selection: Identification of the problem through empathy, formulate and ideate to solve the problem.

Product Development

- Identification of a particular solution out of different possible solutions from the aspects of performance, cost, and manufacturability.
- Simulation studies of the proposed method/solution for performance evaluation using MATLAB/SIMULINK, PSpice etc.
- Hardware development and testing.

Iterative improvement of the product & Report writing: Development of assemblies/mock-up models/ working models/ prototypes/functional models/products, Testing and design review, Report writing.

IPR: Different forms of innovations emanating from the human mind and their protection using different tools of IPR, Basic introduction to Patents, Trademarks, Copyright, Industrial Designs Registrations, Geographical Indications Trade Secrets. Filing of IPR, implications, Ethics and societal implications of Intellectual Property Rights.

Learning Resources:

Text Books:

1. The design studio method: creative problem solving with UX sketching, Sullivan, Brian, Focal Press, 2016.
2. Autodesk Fusion 360 Black Book, Verma G., CADACAMCAE Works, 2021, 2nd Edition.

3. Class Junghans and Adam Levy, Intellectual Property Management: A guide for Scientists, Engineers, Financers and Managers, Willey (2006)

Other Suggested Readings:

1. Self-Paced Tutorials: <https://help.autodesk.com/view/fusion360/ENU/courses/>
2. Product Documentation <https://help.autodesk.com/view/fusion360/ENU/?guid=GUID1C665B4D-7BF7-4FDF-98B0-AA7EE12B5AC2>

EE1308

0-1-2 (2)

Power Systems Lab**Pre-Requisites:** EE1204 & EE1302**Course Outcomes:**

CO-1	Understand the Reactive power control in a Tap Changing Transformer & long transmission lines
CO-2	Determine the sequence components of unbalanced voltages and fault currents of Power system elements
CO-3	Understand the characteristics of PV array
CO-4	Evaluate the breakdown strength of Electrical Insulation and design ground grid for Substation

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	1	2	1	1	1	3	3	1	1	3	1
CO-2	3	3	2	1	2	1	1	1	3	3	1	1	3	1
CO-3	3	3	2	2	2	3	3	1	3	3	2	2	3	3
CO-4	3	3	3	3	3	3	2	1	3	3	3	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Reactive Power Control Using Tap Changing Transformer
2. Regulation, efficiency characteristics of artificial transmission line and Reactive Power compensation
3. Determination of Sequence Reactance's and fault studies of Power System Elements (Alternator & 3- Φ Transformer)
4. Analysis of unbalanced voltages using Symmetrical Component Analyzer
5. Determination of String efficiency of simulated string of insulators & calibration of sphere gap arrangement for HV voltage measurement using 100kV Test Transformer
6. Characteristics of PV Array
7. Grounding grid design for a two layers soil model using AUTOGRID PRO software simulation
8. Tracking and Treeing test on surface of solid insulation
9. Generation of different Impulse waveforms
10. Testing of Electromechanical Under Voltage Relay and plot the graph between Operating Time Vs percentage of plug Setting voltage.
11. Testing of Electromechanical Over Voltage Relay and plot the graph between Trip Time Vs Plug Setting Multiplier (PSM).
12. Testing the operating characteristics of microprocessor based over current relay and plotting a graph between trip time Vs Plug Setting Multiplier (PSM).
13. Measurement of partial discharges in solid and liquid dielectrics.

CO-4	3	3	3	3	3	1	1	1	3	2	1	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Solution of first and second order differential equations using RK-4th order method.
2. Simulation of half wave and full wave bridge rectifiers with R-L, R-C and R-L-C Loads using MATLAB
3. Performance evaluation of medium and long transmission lines using MATLAB
4. Symmetrical component analysis using MATLAB
5. DC Motor Speed control using MATLAB/Simulink
6. Design and analyses the performance of feedback control system
7. Simulate and tune parameters of a PID controller for a Type 2 system
8. Load frequency control of single area and two area power system with MATLAB /Simulink
9. Performance of FC-TCR compensator using PSCAD/ EMTDC/MATLAB
10. Permanent Magnet DC motor simulation using MATLAB /Simulink
11. Transient stability studies of SMIB system using equal area criterion using MATLAB.
12. Analysis of 5-Bus system using Power World Simulator
13. Simulation and Analysis of Faults using PSCAD
14. Small signal stability studies of SMIB system using Phillips Hefron model
15. Speed Control of Induction Motor using V/f method.

Learning Resources:Text Books:

1. James C. Squire and Julie Phillips Brown, Programming for Electrical Engineers: MATLAB and Spice, Academic Press, 2021

**Fractal Course – II****Pre-Requisites:** None**Course Outcomes:**

CO-1	Acquire an in-depth understanding of the specific topic covered in the course, which could range from a particular technology, method, or recent advancement in Electrical Engineering.
CO-2	Develop hands-on skills relevant to the course topic, such as using specific tools, software, or techniques.
CO-3	Apply learned concepts to solve focused and practical engineering problems related to the course content.
CO-4	Understand the interdisciplinary aspects and applications of the course to solve real-world industrial problems.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	-	-	-	-	-	-	-	-	-	2	2
CO-2	-	-	-	2	2	3	3	-	-	-	-	-	3	2
CO-3	-	-	3	2	2	-	-	-	-	-	-	-	3	2
CO-4	-	-	-	-	-	-	-	-	1	3	-	2	2	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

This one-week course aims to bridge the gap between academic learning and industry application / latest research developments, providing students with a comprehensive understanding of the Electrical engineering field and enhancing their readiness for professional careers.

- Structure: Lectures delivered by an expert from the Electrical Engineering Industry / R&D Organization / Academic Institution (SPARK Collaborators / Foreign Subject Experts in GIAN program / Adjunct Professors from Foreign Universities @ NITW).
- Content: Topics covering current practices, case studies, technological advancements, and future trends.
- Interactive Sessions: Q&A sessions, discussions, and case study analyses to foster interaction between students and the subject expert.
- Assessment: the mode of assessment (Participation, a short reflective report / a presentation summarizing key takeaways from the lectures / Objective or descriptive type exam, etc.) will be decided by the subject expert

Learning Resources:

- Course material and any learning resources suggested by the experts

7th Semester

EE1401

3-0-0 (3)

Electric Drives

Pre-Requisites: EE1202 & EE1203**Course Outcomes:**

CO-1	Understand the various drive mechanisms and methods for energy conservation.
CO-2	Apply power electronic converters to control the speed of DC motors and induction motors.
CO-3	Evaluate the motor and power converter for a specific application.
CO-4	Develop closed loop control strategies of drives

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	2	3	3	3	2	1	1	2	3	3	3
CO-2	3	3	3	3	3	3	3	2	3	1	2	3	3	3
CO-3	3	3	3	3	3	3	3	2	3	1	2	3	3	3
CO-4	3	3	3	3	3	3	3	2	3	1	3	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction to electric drives: Advantages of Electric drives, Parts of Electrical Drives, Electric Motors, Power Modulators, Sources, Choice of Electric Drives and selection of drives for various applications.

Dynamics of electrical drives: Fundamental torque equation, components of load torque, speed-torque characteristics of loads, Nature and classification of load torques, speed-torque convention & multi-quadrant operation. Equivalent values of drive parameters, loads with rotational motion, loads with translational motion, measurement of moment of inertia. Steady state stability, dynamic stability, load equalization. Basic principles of closed-loop control.

DC Motor Drives: Speed control of DC motors using single-phase and three-phase fully controlled and half controlled rectifiers in continuous and discontinuous mode of operation. Single quadrant, two quadrant and four quadrant chopper controlled drives in continuous and discontinuous mode of operation.

Induction Motor Drives: Speed control of cage induction motors with constant V/f control for open-loop and closed-loop (slip speed compensation) schemes by voltage source inverter (VSI), slip power recovery scheme, static Scherbius and Krammer methods, current source inverter (CSI)-fed induction motor drive (stator current control), comparison of VSI and CSI-fed induction motor drives, and AC and DC dynamic braking methods.

Synchronous Motor Drives: Speed control of Permanent Magnet Synchronous Motor (PMSM) drive with variable voltage and frequency control schemes, speed control of brushless direct current motor (BLDC) drives by current control using hall effect sensors and its applications.

Learning Resources:Text Books:

CO-4	3	3	3	3	3	3	2	1	3	3	3	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****List of Experiments:**

1. Study of Static Characteristics of SCR, MOSFET & IGBT.
2. Study of single-phase half-controlled, Fully-Controlled bridge converter with R, RL and RLE load.
3. Study of three-phase half-controlled and Fully- Controlled bridge converter with R, RL and RLE load.
4. Study of single-phase dual converter with *RL* loads.
5. Study of AC voltage controller using TRIAC with *R* and *RL* load.
6. Analysis of steady-state characteristics of DC-DC Buck converter with Continuous Current Mode (CCM) and Discontinuous Current Mode (DCM).
7. Analysis of steady-state characteristics of DC-DC Boost converter with Continuous Current Mode (CCM) and Discontinuous Current Mode (DCM).
8. Analysis of steady-state characteristics of DC-DC Buck-Boost converter with Continuous Current Mode (CCM) and Discontinuous Current Mode (DCM).
9. Speed control of DC motor by armature voltage control scheme using four-quadrant chopper.
10. Analysis of frequency spectrum of unipolar and bi-polar Pulse width modulation (PWM) based single-phase inverter using dSPACE-1104 controller.
11. Analysis of frequency spectrum for 3-Phase Pulse width modulation (PWM) & non- Pulse width modulation (PWM) inverter using dSPACE -1104 controller.
12. Open loop speed control scheme of induction motor by constant V/f using dSPACE-1104 controller.
13. Closed loop speed control scheme (slip speed compensation) of induction motor by constant V/f using dSPACE-1104 controller.

Seminar and Technical Writing

Pre-Requisites: None**Course Outcomes:**

CO-1	Consolidate ideas based on expert talks attended
CO-2	Prepare a well-organized report employing elements of critical thinking and technical writing
CO-3	Demonstrate the ability to describe, interpret and analyze the subject matter and develop competence in presenting

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	-	2	-	-	3	3	-	2	3	-	3	2	2
CO-2	2	-	2	-	-	3	3	-	2	3	-	3	3	2
CO-3	2	-	2	-	-	3	3	-	2	3	-	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Description:**

In Seminar and Technical Writing, every student is expected to prepare a well-organized report based on one / all of the following:

- by attending at least 5 expert lectures / invited talks / Seminar / Popular lectures etc. organized by the institute/any of the departments, ideally in a specific domain or with the same theme.
- prepare a business or marketing plan based on patent search

The student is expected to consolidate the ideas from these lectures/patent searches and may even include material from other sources to strengthen the content of the report. The student should prepare a well-organized report based on the above and present it to the panel constituted by the department, for evaluation.

Evaluation Criteria:

The student will be evaluated by the panel based on the below criteria.

Criteria	Description	Weightages
I	Clarity on the topic	
II	List of lectures attended	
III	Report	
IV	Presentation	
V	Response to questions	

Evaluation Criteria-CO Mapping

Criteria \ CO	CO1	CO2	CO3

CO-4	-	-	-	-	-	-	-	-	-	3	-	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Description:**

Every student has to undergo either a Summer Internship / EPICS / Research project. The summer internship may be undergone in an Industry/Research organization or any premier academic Institution, including NIT Warangal for 6-8 weeks. The EPICS/research project shall be registered under the guidance of any faculty member in the institute. The student is required to submit a report and present the work before an evaluation committee, nominated by the Head of the Department.

Evaluation Criteria:

The student will be evaluated by the panel based on the below criteria. Weightage for each criterion will be determined by the panel and will be informed to the students.

Criteria	Description	Weightages
I	Relevance of the area of work	
II	Performance of the Task	
III	Crucial learnings from the work	
IV	Report Preparation	
V	Presentation and Response to questions

Students are expected to choose real-world contemporary problem and apply the engineering principles learned, to solve the problem through building prototypes or simulations or writing codes or establishing processes/synthesis/correlations etc. The department constituted panel will decide the suitability and worthiness of the project

The B.Tech. Project work will be evaluated for 100 marks, with the following weightages:

Component	Weightage
Periodic evaluation by Guide	40 marks
Mid-term review	20 marks
End Semester viva-voce examination	40 marks
Total	100 marks

The midterm review and the end semester viva-voce examination will be conducted by a committee constituted by the Head of the Department. If the performance of a student is not satisfactory, he/ she can be awarded 'F' grade. Such a student will be given a maximum time of three months to improve his/her performance. If the performance of such a student is not satisfactory even after the extended time period, he/ she will have to repeat the project work in the next academic year.

Evaluation Criteria:

The student will be evaluated by the panel based on the below criteria. Weightage for each criterion will be determined by the panel and will be informed to the students.

Criteria	Description	Weightages
I	Selection of Topic	10
II	Literature Survey	10
III	Objectives and Solution Methodology	10
IV	Performance of the Task and clarity on the work	30
V	Report Preparation	20
VI	Presentation and Response to questions	20

CO-3	3	3	3	3	3	3	3	3	3	3	-	3	2	-
CO-4	3	2	3	3	2	2	2	2	2	2	-	-	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Electrical Heating and Welding: Electric Heating: Methods and merits of electric heating, resistance heating, induction heating and dielectric heating. **Electric welding:** Welding equipment, resistance welding and arc welding, comparison between AC and DC welding. **Electrolysis:** principle of electrolysis, electroplating, metal extraction and metal processing, electromagnetic stirs. Problems on heating, welding and electrolysis.

Illumination: Terminology & definitions, Laws of illumination, photometry, principle of operation of filament lamps, fluorescent tubes and their comparison. Compact fluorescent lamps (CFL), Light Emitting Diode based lamps, Discharge lamps: mercury vapor lamps, sodium vapor lamps and neon lamps, Principles of light control, Types and design of lighting schemes factory lighting, sports lighting, street lighting and flood lighting. Lighting calculations.

Electric Traction: Systems of electric traction and track electrification- DC system, single phase and 3-phase low frequency and high frequency system, composite system, kando system, comparison between AC and DC systems, Mechanics of traction movement, speed – time curves for different services, trapezoidal and quadrilateral speed–time curves, tractive effort, specific power, specific energy consumption, effect of varying acceleration and braking, retardation, adhesive weight and braking retardation, coefficient of adhesion. Schemes and speed control of traction motors, requirements of train lighting, systems of train lighting, methods of obtaining unidirectional polarity- Rosenberg Generator-single battery system, double battery parallel block system. Lighting by making use of 25KV AC supply. End-on generation, Coach wiring.

Utilization of Electrical Energy in Electric Vehicles: Charging technologies of electric vehicles/hybrid electric vehicles. Charging infrastructure. **Utilization of Electrical Energy** in Oil and Gas Industry :

CO-2	3	3	3	3	3	2	2	1	2	2	2	2	3	2
CO-3	3	3	3	3	2	2	2	1	2	1	3	2	3	2
CO-4	3	3	3	3	3	2	1	1	3	2	3	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Introduction: Static characteristics and static calibration and Dynamic characteristics of Instrument - Zero order, step, ramp and frequency response of first order and second order instrument. Displacement and proximity gauges. Linear Variable Differential Transformer (LVDT) - differential transformer, phase angle adjustment, methods for null reduction, filter frequency response, Hall-effect sensors.

Measurement of Temperature, Flow, Level and Viscosity: Thermocouple, Resistance Temperature Detector (RTD), Thermistor, Radiation Pyrometer, Differential Pressure flow- meter, Variable area flow-meter, Variable reluctance transducer, Turbine flow-meter, Ultrasonic flow-meter (Both transit time and Doppler Shift), electromagnetic flow-meter and Mass flow meter, Capacitance based and Float based method, pH -probe and viscosity measurement and associated Signal Conditioning circuitry.

Measurement of Pressure, strain & Vibration: Estimation of errors and Calibration, Fundamentals of 4-20 mA current loops and 3-15 psi pressure loop, Regulators and power supplies for industrial instrumentation.

Signal Conditioning and Processing: Estimation of errors and Calibration, Fundamentals of 4-20 mA current loops and 3-15psi pressure loop, Regulators and power supplies for industrial instrumentation.

Basics of Data transmission: Synchro and Servo motor. IEEE-488 bus, RS 232 and RS 485 interface. Pneumatic and Hydraulic Instrumentation system

Automation: Benefits and Impact of Automation on Manufacturing and Process Industries; Architecture of Industrial Automation Systems. Data Acquisition systems and PC based automation.

Introduction to Automatic Control: P-I-D Control, Controller Tuning, Special Control Structures, Feed-forward and Ratio Control, Predictive Control, Control of Systems with Inverse Response, Cascade Control. Process and Instrumentation Diagrams;

Sequence Control: Programmable Logic Controllers (PLCs) and Relay Ladder Logic, Scan Cycle, RLL Syntax, Structured Design Approach, Advanced RLL Programming, Hardware environment and distributed control systems (DCS); Control of Machine tools: Introduction to CNC Machines.

3 - Substantially

Syllabus:

Introduction to IoT: Characteristics of Internet of Things- Need of IoT, IoT architecture, Area of Applications, IoT applications in Smart Cities, Agriculture, Security, Transport and Medical & Health.

IoT Sensing and Actuation: Introduction, Sensors, Sensor Characteristics, Sensorial Deviations, Sensing Types, Scalar sensing, Multimedia sensing, Hybrid sensing, Virtual sensing, Sensing Considerations. Actuators, Actuator Types, Hydraulic actuators, Pneumatic actuators, Electric actuators, Thermal or magnetic actuators, Mechanical actuators, Soft actuators, Actuator Characteristics.

IoT Connectivity Technologies (Fundamentals): Introduction, IEEE 802.15.4, Zigbee, RFID, DASH7, Z-Wave, LoRa, NB-IoT, Wi-Fi, Bluetooth. **Communication Technologies (Fundamentals):** Introduction, Constrained nodes, Constrained Networks, Infrastructure Protocols, Discovery Protocols, Data Protocols, Identification Protocols, Device Management, Semantic Protocols.

Introduction to Arduino: Integration of Sensors and Actuators with Arduino, Introduction to Python programming, Introduction to Raspberry Pi, Implementation of IoT with Raspberry Pi. **IOT Case Studies:** Agricultural IoT, Components of an agricultural IoT, Advantages of IoT in agriculture, Case Studies, Smart irrigation management system. Vehicular IoT, Components of vehicular IoT, Advantages of vehicular IoT, Crime assistance in a smart IoT transportation system. Healthcare IoT, Components of healthcare IoT, Advantages and risk of healthcare IoT, Case Studies. IoT Case Studies in Electrical Engineering: IoT application to Smart Grid, Smart Cities and Smart Homes, EV Connected Vehicles.

IoT Projects Demonstration: Beginning IoT Hardware Projects, Arduino installation and setup, Setting up Arduino IDE for NodeMCU, Writing an Arduino Sketch, Demo Experiments with Arduino, Printing on the serial console, LED interface with Arduino, DHT Sensor interface with NodeMCU, MQ-2 Gas sensor interface with NodeMCU, Ultrasonic sensor interface with NodeMCU, Obstacle detection using NodeMCU, Servo motor interface with NodeMCU, Relay interface with NodeMCU, Data transmission between NodeMCU and remote server, Pulse sensor interface with NodeMCU.

IoT Analytics (Basics): Introduction, Machine learning, Advantages of ML, Challenges in ML, Types of ML, Selected Algorithms in ML, k-nearest neighbor (KNN), Decision tree, Random forest, k-means clustering, Agglomerative clustering, Density-based spatial clustering of applications with noise(DBSCAN), clustering, Performance Metrics for Evaluating ML Algorithms.

Paradigms, Challenges, and the Future: Introduction, Evolution of New IoT Paradigms (Discussion Only), Internet of battlefield things (IoBT), Internet of vehicles (IoV), Internet of underwater things (IoUT), Internet of drones (IoD), Internet of space (IoSpace), Internet of services (IoS), Internet of people (IoP), Internet of nano things (IoNT), Internet of everything (IoE). Challenges Associated with IoT, Mobility, Addressing - Power Heterogeneous connectivity, Communication range, Security, Device size.

Application in Electrical Engineering: Induction Machine Control. Home Automation, Smart Meters, SCADA, Asset Maintenance, E-Mobility, Distributed Generation Monitoring.

Learning Resources:

Text Books:

1. Sudip Misra, Anandarup Mukherjee and Arijit Roy, Introduction to IoT, Cambridge University Press, 2021.
2. Dimitrios Serpanos, Marilyn Wolf, Internet-of-Things (IoT) Systems - Architectures, Algorithms, Methodologies, Springer Publications, 2018.

Reference Books:

1. Anandarup Mukherjee, Chandana Roy, Sudip Misra - Introduction to Industrial Internet of Things and Industry 4.0-CRC Press, 2020.
2. Anuradha, J., Tripathy, B. K, Internet of things (IoT) technologies, applications, challenges and solutions, CRC Press, Taylor & Francis, 2018.
3. Mansaf Alam, Kashish Ara Shakil, Samiya Khan, Internet of Things (IoT) - Concepts and Applications, Springer Publications, 2020.
4. Ernest O. Doebelin, Dhanesh N. Manik, Doebelin's Measurement Systems, McGraw Hill, 2019, 7th Edition.
5. Albert D. Helfrick and William D. Cooper, Modern Electronic Instrumentation and Measurement, Pearson Education India, 2015, , 1st Edition.

Other Suggested Readings:

EE1327

3-0-0 (3)

Special Machines

Pre-Requisites: EE1202 & EE1203**Course Outcomes:**

CO-1	Understand the principle of single-phase induction motors and identify the suitable methods of starting.
CO-2	Understand the operating principles of special machines and their applications.
CO-3	Identify the suitable applications of special machines.
CO-4	Understand the energy efficient and super conducting machines.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	2	2	1	1	1	1	1	1	2	3	1
CO-2	3	3	2	2	2	1	1	1	1	1	1	2	3	1
CO-3	3	3	2	3	3	1	1	1	1	1	1	3	3	3
CO-4	3	2	2	2	3	1	1	1	1	1	1	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Single Phase Induction Motors: Principle of operation, Double revolving field theory, speed-torque characteristics, Equivalent circuit, Phasor diagrams, Determination of equivalent circuit parameters, Starting methods, Split-phase starting, Resistance starting, Capacitance starting, Shade pole starting, Speed control methods, Applications, Principle of cross field theory, Problem on all the above motors.

Single Phase Synchronous Motors: Construction, principle of operation and applications of Reluctance motors, Hysteresis motors, Sub-synchronous motors

AC Series Motors: Construction, Principle of operation, Phasor diagrams and Characteristics of Single phase and Three Phase AC Series motors, Simple and compensated motors, Universal motors and their applications, Problems on all the above motors

Schrage Motor: Construction, Principle of operation, Speed and power factor control, Applications

Special Purpose Machines: Construction and principle of operation of Stepper motors, Permanent magnet DC motors, Brushless DC motors, Permanent Magnet Synchronous Motors, Switched Reluctance Motors, Linear Induction motors and their Applications, Problems on all the above motors

Energy Efficient Machines: Construction, Basic Concepts, losses minimization and efficiency calculations of Energy efficient AC machines

Super Conducting Machines: Construction, Principle of operation and basic concepts of superconducting AC machines.

Learning Resources:Text Books:

1. E. Fitzgerald, C. Kingsley and Stephen D. Umans: Electric Machinery, Tata McGraw-Hill Pub., 2020, 7th Edition.
2. P.S. Bimbhra: Generalized Theory of Electrical Machines, Khanna Pub., 2017, 6th Edition.
3. D.P. Kothari and I J Nagarath, Electric Machines, Tata McGraw-Hill Pub., 2017, 5th Edition.

Reference Books:

1. P.S. Kenjo and S.Nagamori, Permanent Magnet DC motors, Clarendon Press, Oxford,1985.
2. J.B. Gupta, Theory and Performance of Electrical Machines, S. K. Kataria & Sons, 14th Edition, 2006.
3. H. Cotton, Advanced Electrical Technology, Reem Publications, 2011.
4. Stephen J. Chapman, Electric Machinery Fundamentals, Tata McGraw - Hill Education, 4th Edition, 2017.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/102/108102156/>

Python Programming

Pre-Requisites: None

Course Outcomes:

CO-1	Understand the problem solving techniques using algorithms and procedures
CO-2	Understand how to read, write and execute simple Python Programs
CO-3	Apply Python data structures – lists, tuples and dictionaries
CO-4	Develop Algorithms and Code in Python Language.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	1	2	2	3	1	1	2	2	3	2	2
CO-2	3	2	2	1	2	2	3	1	1	2	2	3	2	2
CO-3	3	2	2	1	2	2	3	1	1	2	2	3	2	2
CO-4	3	3	3	2	3	3	3	3	2	2	2	3	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Syntax: Data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments; understanding error messages; Conditions, Boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation.

Strings and text files; manipulating files and directories, OS and SYS modules; text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv). String manipulations: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa. Binary, octal, hexadecimal numbers.

Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

Functions: create, call, arguments and return values, arbitrary arguments, keyword arguments, arbitrary keyword arguments, default argument Recursive functions

Introduction to classes and OOPS.

Modules, Introduction to NumPy, SciPy, Matplotlib, Pandas, Tensorflow.

File Handling – create and delete files, read and write into text and excel files.

Exception Handling, try-except, raising and exception, else and finally blocks, handling multiple exceptions.

List of Experiments:

1. Programs using sequential constructs
2. Programs using selection constructs
3. Programs using Iterative constructs
4. Programs using nested for loops
5. Programs using lists, tuples and dictionaries
6. Simple Python functions

7. File Handling
8. Modules
9. Functions and Recursion
10. Exception Handling

Learning Resources:

Text Books:

1. Kenneth A. Lambert, Fundamentals of Python: First Programs, Cengage Learning, 2012.
2. Allen B. Downey, Think Python: How to Think like a Computer Scientist, Updated for Python 3, O'Reilly Media, Publishers, 2015, 2nd Edition.

Reference Books:

1. Guido van Rossum and Fred L. Drake Jr, An Introduction to Python – Revised and updated for Python 3.2, Network Theory Ltd., 2011.
2. Reema Thareja, Python Programming using Problem Solving Approach, Oxford University Press, 2017.
3. John V Guttag, Introduction to Computation and Programming Using Python, Revised and expanded Edition, MIT Press, 2013.
4. Mark Lutz, “Learn Python”, 5th Edition, O’reilly Media, Inc, June, 2013.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/106106182/>
2. <https://www.python.org>
3. <http://greenteapress.com/wp/thinkpython/>

EE1322

3-0-0 (3)

Design of Electrical Systems

Pre-Requisites: EE1202 & EE1203**Course Outcomes:**

CO-1	Understand & Formulate mathematical modelling for electric, magnetic and thermal circuits of electrical machines.
CO-2	Analyze design aspects of rotating DC machines.
CO-3	Analyse optimum design procedure of transformers.
CO-4	Select suitable layout and rating of sub-station components.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	3	2	2	1	1	1	1	1	1	1	3	2
CO-2	3	3	3	2	2	2	2	1	1	1	1	1	3	2
CO-3	3	3	3	2	2	2	2	1	1	1	1	1	3	2
CO-4	3	3	3	2	3	1	2	1	2	2	3	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Magnetic Circuit: Magnetic leakage calculations, Effect of leakage flux, Slot leakage, tooth top leakage, Zig-Zag Leakage, over hang leakage. Leakage with fractional pitch windings, effect of saturation and load on leakage coefficient. Leakage reactance calculations of polyphase machines.

Electric Circuit: Design of DC-machine windings: Simplex, Duplex and Multiplex Lap and Wave Windings, Design of AC machine windings: Concentric windings, Mush windings, Double layer integral slot and fractional slot lap and wave windings.

Design of Rotating Machines: Relation between rating and dimensions of rotating machines, Choice of specific electric and magnetic loadings, Separation of main dimensions (D and L) for DC machines, Induction Machines and Synchronous Machines. Output equation for DC- machine, Selection of No. of Poles, No. of armature slots, Length of air-gap and field pole design. Stator design for induction and synchronous machine, design of rotor slots end rings and wound rotor for induction machine. Design of rotor for salient and non-salient pole synchronous machines.

Design of Transformers: Output equation, Choice of flux density, Design of rectangular, square and stepped cores, and Design for minimum cost and minimum losses. Design of windings. Cooling of transformers, Design of transformer tanks and cooling ducts.

Design of Substations: Layouts for indoor and out-door substations for single feeder, double feeder and multi-feeder. Design of Power Capacitors. Selection and design of circuit breakers and Isolators. Basic design aspects of gas insulated substations (GIS), Design of substation Grounding.

Learning Resources:Text Books:

1. A. K. Sawhney A course in Electrical Machine Design, Dhanpat Rai & Co., New Delhi. 2013, 6th Edition.
2. Juha Pyrhonen, Tapani Jokinen, Valeria Hrabovcova, Design of Rotating Electrical Machines, John Wiley & Sons, New Delhi, 2013.
3. M.K. Giridharan, Electrical Systems Design, I K International, 2015.

Reference Books:

1. Alexander Gray, Electrical Machine Design, McGraw Hill, New York, 2008.
2. M. G. Say, Performance and Design of AC Machines, Pitman Pub, 2002.
3. E Clayton & N. N. Hancock, Performance and design of DC machines, CBSPub., 1998, 3rd Edition.
4. H. Partab, Arts and Science of Utilization of Electrical Energy, Dhanpat Rai & Co., 2017.

EE1324

3-0-0 (3)

AI Techniques in Electrical Engineering**Pre-Requisites:** None**Course Outcomes:**

CO-1	Understand concepts of ANNs, Fuzzy Logic and Genetic Algorithm
CO-2	Distinguish between knowledge-based systems and algorithmic based systems
CO-3	Understand operation of Fuzzy Controller and Genetic Algorithm
CO-4	Apply soft computing techniques for real world problems

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	2	3	1	3	1	3	3	1	2	1	3
CO-2	3	3	3	3	2	3	2	3	1	2	3	2	3	1
CO-3	2	3	2	2	3	2	2	2	2	2	2	2	2	2
CO-4	2	2	2	2	3	1	1	1	1	1	1	2	1	1

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Artificial Neural Networks: Introduction, Models of Neuron Network, Architectures – Knowledge representation, Artificial Intelligence and Neural networks–Learning process, Error correction learning – Hebbian learning –Competitive learning – Boltzman learning –Supervised learning – Unsupervised learning – Reinforcement learning- Learning tasks.

ANN Paradigms: Multi – layer perceptron using Back propagation Algorithm (BPA), Self – Organizing Map (SOM), Radial Basis Function Network (RBFN), Functional Link Network (FLN).

Fuzzy Logic: Introduction – Fuzzy versus Crisp, Fuzzy sets – Membership function – Basic Fuzzy set operations, Properties of Fuzzy sets – Fuzzy Cartesian Product, Operations on Fuzzy relations– Fuzzy logic – Fuzzy Quantifiers, Fuzzy Inference-Fuzzy Rule based system- Defuzzification methods.

Genetic Algorithms: Introduction-Encoding –Fitness Function-Reproduction operators, Genetic Modeling –Genetic operators-Cross over -Single site cross over, Two point cross over –Multi point cross over-Uniform cross over, Matrix cross over - Cross over Rate – Inversion & Deletion, Mutation operator –Mutation –Mutation Rate-Bit-wise operators, Generational cycle-convergence of Genetic Algorithm.

Applications of AI Techniques: Load forecasting, Load flow studies, Economic load dispatch, Load frequency control – Single area system and two area system, Reactive power control, Speed control of DC and AC Motors.

Learning Resources:Text Books:

1. S. Rajasekaran, G. A. Vijayalakshmi Pai, Neural Networks, Fuzzy Systems and Evolutionary Algorithms, Synthesis and Applications, Prentice Hall India Pvt., Limited, 2017.
2. S. N. Sivanandam, S.N. Deepa, Principles of Soft Computing, Wiley India Pvt. Limited, 2011, 2nd Edition.

Reference Books:

EE1326

3-0-0 (3)

Computer Methods in Power Systems**Pre-Requisites:** EE1204**Course Outcomes:**

CO-1	Design mathematical models for power system components.
CO-2	Analyze and pick the best algorithm for a selected power system problem.
CO-3	Generate input data suitable for load flow, fault calculations and state estimation.
CO-4	Understand application of Load flow methods, contingency analysis and SCADA in modern Power systems.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	2	1	1	1	1	1	1	1	1	3	1
CO-2	3	3	2	2	3	1	1	1	1	1	1	1	3	1
CO-3	3	3	2	1	2	1	1	1	2	2	2	1	3	1
CO-4	3	3	3	3	3	1	1	1	2	2	3	3	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Incidence and network matrices: Introduction, Graphs, Incidence matrices, Primitive matrices, Types of network matrices, formation of network matrix, PI-representation of off-nominal tap transformers, Y-bus by singular transformation, examples of formation of incidence matrices, formation of Y-bus by inspection.

Algorithms for formation of Z-bus matrix: Step by Step algorithm for formation of Z-bus. Modification of Z-bus matrix for changes in the network, example of formation and modification of Z-bus matrix.

Short Circuit calculations: Introduction, Short circuit calculations using Z_{bus}^{012} , z_f^{abc} , y_f^{abc} , z_f^{012} , y_f^{012} matrices for various faults, example of short circuit calculations using Z_{bus}^{102} for L-L-L and L-G faults.

Sparsity Technique in Load Flow Studies: Introduction, Sparsity technique for Y-bus and Gauss-Seidel method.

Review and Comparison: Gauss-Seidel, Newton - Raphson, Fast decoupled load flow methods. Concept of Contingency analysis. Forward – backward and substitution method for radial distribution systems.

Introduction to Real time control of Power System: Introduction, linear State Estimation WLS equations, Types of measurements, D.C power flow based WLS equations, examples of DC based WLS State Estimation, SCADA, communication systems. Role of PMUs in power systems.

Learning Resources:Text Books:

1. Stagg and ElAbiad, Computer Methods in Power Systems Analysis, McGrawHill ISE, 2019.
2. M.A. Pai, Computer Techniques in Power System Analysis, Tata McGraw-Hill Education, 2017, 3rd Edition.

Reference Books:

- 1 Hadi Saadat, Power System Analysis, PSA Publishing, 2010.

- 2 William Stevenson and John Grainger, Power System Analysis, McGraw Hill Education, 2017.
- 3 Allen J. Wood and Bruce F. Wollenberg, Power Generation, Operation, and Control, Wiley Blackwell, 1996.

EE1328

3-0-0 (3)

High Voltage Engineering

Pre-Requisites: EE1204 & EE1205**Course Outcomes:**

CO-1	Understand the concepts of electric vehicles, hybrid electric vehicles and their impact on environment
CO-2	Analyze the drive-train topologies and advanced propulsion techniques
CO-3	Analyze hybrid energy storage methodologies
CO-4	Identify the suitable power converter topologies for motor control and hybrid energy storage

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	2	3	3	1	2	2	2	1	2	2	3	2
CO-2	3	3	2	3	3	2	2	1	2	1	3	2	3	2
CO-3	3	3	2	3	3	2	2	1	2	1	3	2	3	2
CO-4	3	2	2	2	3	1	1	1	2	1	2	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Electrostatic fields, their control and estimation: Electric Field intensity, Electric strength, classification of Electric Fields, control of electric Field intensity, basic equations for potential and field intensity in electrostatic fields, Analysis of electric field intensity in homogenous and multi-dielectric electric fields, numerical methods for estimation of electric field intensity.

Generation of high dc and ac voltages: Introduction, Rectifier circuits, Cockcroft-Walton voltage multiplier circuit, electrostatic generator, generation of high ac voltages by cascaded transformers, series resonant circuit.

Generation of impulse voltages and currents: Definitions, impulse generator circuits, Analysis of impulse generator circuit, multistage impulse generator circuit, triggering of impulse generator, impulse current generation.

Measurement of high voltages and currents: Introduction, sphere gap, uniform field spark gap, rod gap, electrostatic voltmeter, generating voltmeter, Fortes cue method, resistive and capacitive voltage dividers, measurement of high DC, AC and impulse currents.

High voltage testing of electrical equipment: Layout of high voltage laboratory with major testing and measuring equipment's, Determination of their ranges and ratings, earthing system, electromagnetic shielding and protective fencing. Testing of overhead line insulators, testing of cables, Testing of Bushings, Testing of power capacitors, testing of power transformers, testing of circuit breakers. IEC, ANSI, IEEE and Indian standards for testing electrical equipment.

Non-destructive testing techniques: Measurement of resistance, measurement of dielectric constant and loss factor, High voltage Schering Bridge, measurement of large capacitances, partial discharges measuring and diagnostic techniques. Time domain and Frequency domain analysis of dielectric materials subjected to an electric field.

Breakdown mechanism of insulating materials: Introduction, Mechanism of breakdown in gases, Townsend's first ionization coefficient, cathode processes, secondary effects, Townsend's second ionization coefficient, Townsend breakdown mechanism, streamer or kanal mechanism of spark, Paschen's law, Penning effect, Breakdown in non-uniform fields, principles of breakdown in solid and liquid dielectrics. Applications of insulating materials in transformers, rotating machines, circuit breakers, cable power capacitors and bushings.

Learning Resources:

EE1330

3-0-0 (3)

Modeling and Analysis of Electrical Machines**Pre-Requisites:** EE1202 & EE1203**Course Outcomes:**

CO-1	Understand the limitations of conventional models of electrical machines
CO-2	Compute the torque produced in electrical machines using the concept of co- energy
CO-3	Analyze the performance of machines using reference frame theory
CO-4	Evaluate strategies to control the torque for a specific application

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-2	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-3	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-4	3	3	3	3	3	3	3	1	2	1	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Principles for electrical machine analysis and magnetically coupled circuits: Review of basic concepts, magnetizing inductance, Modelling linear and non-linear magnetic circuits.

Electromechanical energy conversion: Principles of energy flow, concept of field energy and co-energy, Derivation of torque expression for various machines using the principles of energy flow and the principle of co-energy, Inductance matrices of induction and synchronous machines.

Theory of DC machines: Review of the DC machine, mathematical model of commutator, State-space model of a DC machine and reduced order model & transfer function of the DC machine.

Reference Frame Theory: Concept of space vector, components of space vector, direct and quadrature axis variables.

Transformation: Types of transformation, condition for power invariance, zero-sequence component, Expression for power with various types of transformation, Transformations between reference frames, Clarke and Park's Transformations, Variables observed from various frames, Simulation studies.

Theory of symmetrical Induction Machines: Voltage and torque in machine variables, Derivation of dq0 model for a symmetrical induction machine, Voltage and torque equation in arbitrary reference frame variables, Analysis of steady-state operation, State-space model of induction machine in 'd-q' variables, Simulation studies.

Theory of synchronous machines: Derivation of dq0 model for a salient pole synchronous machine with damper windings using Park's transformation, Torque expression of a salient pole synchronous machine with damper windings and identification of various components.

CO-4	3	3	3	3	3	3	3	1	2	1	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Overview of Digital Design with Verilog HDL: Emergence of HDLs, Typical Design flow, Hierarchical modelling concepts, Lexical conventions, data types, Gate level Modeling, Dataflow Modeling, Behavioral Modeling, Structural Modeling, Logic Synthesis with Verilog HDL.

Combinational circuits design: Design with basic logic gates, comparators, data selectors, priority encoders, decoders, full adder, serial binary adder, parallel binary adders-ripple-carry adder, carry-look ahead adder; Parallel prefix adders- Carry select Adder, Verilog models of combinational circuits.

Sequential circuit design: Memory elements and their excitation functions SR, JK, T, and D latches and flip-flops, master slave JK flip-flop, edge-triggered flip-flop Synthesis of synchronous sequential circuits, Mealy and Moore machines, state minimization. Registers, synchronous and asynchronous counters Verilog models of sequential circuits.

Memory and Programmable logic devices: RAM, ROM- Cell Organization, Memory decoding, PAL, PLA, CPLD and FPGA

Testing of Fault Analysis: Types of Faults, Hazards in the Logic Circuits Testing of Combinational Logic Circuits, Testing of Sequential Logic Circuits.

Learning Resources:Text Books:

EE1421

3-0-0 (3)

Switched Mode Power Conversion

Pre-Requisites: EE1301**Course Outcomes:**

CO-1	Understand & Analyze the operation of DC-DC converters with current and voltage mode control
CO-2	Analyze resonant converters and their control techniques
CO-3	Design DC-DC converters and feedback loop
CO-4	Understand & Analyze the operation and control of multilevel inverters

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	2	3	1	1	1	2	1	2	3	3	3
CO-2	3	3	3	2	3	1	1	1	2	1	2	2	3	3
CO-3	3	3	3	3	3	1	1	1	3	1	3	3	3	3
CO-4	3	3	3	2	3	1	1	1	2	1	2	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

DC/DC Converters and Current Mode control: Basic topologies of buck, boost converters, buck-boost converters and cuk converter, isolated DC/DC converter topologies: forward, and fly-back converters, half and full bridge topologies, modeling of switching converters. Voltage mode and current mode control of converters, peak and average current mode control, its advantages and limitations, voltage and current fed converters.

Resonant Converters: Need for resonant converters, types of resonant converters, methods of control, phase- modulation technique with ZV Sin full-bridge topology, series resonant converter and resonant transition converter.

Converter Transfer Functions: Application of state-space averaging to switching converters, derivation of converter transfer functions for buck, boost and fly-back topologies.

Power Converter Design: Design of filter inductor & capacitor, and power transformer, Ratings for switching devices, current transformer for current sensing, design of drive circuits for switching devices, considerations for PCB layout.

Controller Design: Introduction, mechanisms of loop stabilization, shaping E/A gain vs. frequency characteristic, conditional stability in feedback loops, stabilizing a continuous mode forward converter and discontinuous mode fly-back converter, feed-back loop stabilization with current mode control, the right-half plane zero.

Inverters: SVM technique, multilevel inverters and PWM methods.

Learning Resources:Text Books:

1. Ned Mohan Tore M. Undeland: Power Electronics: Converters, Applications, and Design, John Wiley & Sons, 2007, 3rd Edition.

2. Abraham I. Pressman, "Switching Power Supply Design", McGraw Hill International, 2009, 3rd Edition.

Planning an Entrepreneurial Venture

Pre-Requisites: None

Course Outcomes:

CO-1	Understand the process and practice of entrepreneurship and new venture creation
CO-2	Identify entrepreneurial opportunities, preparation of a business plan for launching a new venture
CO-3	Explore the opportunities in the domain of Electrical, Electronics and Computer Engineering for launching a new venture
CO-4	Analyze the functional management issues of running a new venture

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	2	2	2	1	2	1	1	1	2	2	2	2	2
CO-2	2	2	2	2	1	1	3	2	1	2	2	2	2	2
CO-3	2	2	2	2	1	1	1	1	2	3	2	3	2	3
CO-4	2	2	2	2	1	3	1	1	1	2	3	3	2	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Entrepreneur and Entrepreneurship: Entrepreneurship and Small-Scale Enterprises (SSE); Role in Economic Development, Entrepreneurial Competencies; Institution Interface for SSE.

Establishing the Small-Scale Enterprise: Opportunity Scanning in the domain of Electrical, Electronics and Computer Engineering; Opportunity Identification in the domain of Electrical, Electronics and Computer Engineering; Market Assessment for SSE; Choice of Technology and Selection of Site; Financing the New/Small Enterprises; Preparation of the Business Plan; Ownership Structures and Organizational Framework

Operating the Small-Scale Enterprises: Financial Management Issues in SSE; Operational Management Issues in SSE; Marketing Management Issues in SSE; Organizational Relations in SSE.

Case Studies: Selected Success Stories of Contemporary Entrepreneurs for imbibing positive psychology among the students for launching new ventures.

Learning Resources:

Text Books:

1. Kuratko, New Venture Management: The Entrepreneur's Roadmap, Pearson, 2008.
2. Holt, Entrepreneurship: New Venture Creation, PHI(P) Ltd., 2001.

Reference Books:

Illumination Engineering

Pre-Requisites: None

Course Outcomes:

CO-1	Evaluate the characteristics of illumination sources / devices.
CO-2	Understand and determine the performance of various lighting systems.
CO-3	Design of lighting controls and management
CO-4	Understand the standards of lighting systems and commissioning

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	1	1	1	1	3	1
CO-2	3	3	3	2	2	1	1	1	1	2	1	1	3	1
CO-3	3	3	3	3	3	1	2	2	1	1	1	1	3	3
CO-4	3	3	3	2	1	2	2	3	2	1	1	1	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Ballast based Systems: Introduction - Magnetic and Electronic Ballast – Dimming Electronic Ballast for Fluorescent lamps - Lamp Ballast interactions – Electronic Ballast for HID Lamps - Pulse start metal halide system, Compact Fluorescent lamp.

Solid State Lamps: Introduction – Review of Light sources – white light generation techniques- Characterization of LEDs for illumination application. Power LEDs- High brightness LEDs- Electrical and optical properties – LED driver considerations- Power management topologies- Thermal management considerations- Heat sink design- photometry and colorimetry - color issues of white LEDs- Dimming of LED sources -Designing usable lamp from white LEDs,- Luminaire design steps-SSL test standards. Dimming control scheme- Lighting controls for LED lamps.

Lighting Controls & management: Introduction to lighting control – lighting control strategies – Energy Management strategies– Switching Control–sensor technology- occupancy sensors– PIR– Ultrasonic location, coverage area & mounting configuration – special features – Application. Photo sensors –spectral sensitivity – Photo sensor-based control algorithms – Daylight-artificial light integrated schemes.

Commissioning of lighting controls: NASHRAE / IESNA standards & energy codes – international energy conservation code–compliance with controls Lighting Control Applications: Commercial lighting stage and entertainment lighting–Architectural lighting–Residential Lighting Energy Management and building control systems.

Learning Resources:

Text Books:

Other Suggested Readings:

1. www.aboutlightingcontrols.org

Power Quality

Pre-Requisites: EE1301

Course Outcomes (COs):

CO-1	Estimate the severity of power quality issues and implement solutions, considering both end-user and system-level perspectives.
CO-2	To recognize and categorize various power quality issues, including transients, voltage variations, imbalance, waveform distortion, and fluctuation.
CO-3	Analyze sources of voltage sags, interruptions, and transient overvoltage's.
CO-4	Design and implement solutions to mitigate power quality issues, such as voltage regulation techniques, protection against transient overvoltage's, harmonic filtering, and strategies for managing long-duration voltage variations.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	1	1	1	1	1	1	1	1	3	2
CO-2	3	3	3	3	1	1	1	1	1	1	1	1	3	2
CO-3	3	3	3	3	1	1	1	1	1	1	2	1	3	2
CO-4	3	3	3	3	3	1	1	1	1	1	3	3	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: Power Quality – Voltage Quality; Concerns about Power Quality; The Power quality Evaluation Procedure

Terms and definitions: General Classes of Power quality Problems: Transients, Long-Duration Voltage variations, Short-Duration Voltage Variations, Voltage Imbalance, Waveform Distortion, Voltage fluctuation, Power Quality Terms, CBEMA and ITI Curves

Voltage sags and interruptions: Sources of Saga and Interruptions, Estimating voltage Sag Performance, Fundamental Principles of Protection, Solution at the End-User Level, Motor –Starting Sags

Transient over voltages: Sources of Transient Over voltages, Principles of Over voltage Protection, Devices for Over voltage Protection, Utility Capacitor-Switching transients, Utility System Lightning Protection, Managing Ferro-resonance, Switching Transient Problems with Loads, Computer Tools for Transients Analysis

Fundamentals of harmonics: Harmonic Distortion, Voltage versus Current Distortion ,Harmonics versus Transients, Harmonic Indexes, Harmonic Sources from Commercial Loads ,Harmonic Sources from Industrial Loads , Locating Harmonic Sources, Effects of Harmonic distortion, Interharmonics, Harmonic distortion Evaluations, Principles for Controlling Harmonics, Harmonic Filter design: A Case Study, Standards of Harmonics

Long-duration voltage variations: Principles of Regulating the Voltage, Devices for Voltage Regulation, Utility Voltage Regulator application, Capacitors for Voltage Regulation, End-Users Capacitors Application, Regulating Utility Voltage with distributed Resources Flicker

Power quality monitoring: Monitoring considerations, Historical Perspective of Power quality Measuring Instruments, Power Quality Measurement Equipment ,Assessment of Power Quality Measurement Data, Application of intelligent Systems, Power Quality Monitoring Standards, Monitoring considerations.

Learning Resources:

Text Books:

1. Dugan Roger C, Santoso Surya, Mc Granaghan , Marks F. Beaty and H. Wayre, Mc Graw Hill , Electrical Power Systems Quality, McGraw Hill, 2012, 3rd Edition.
2. Math H. Bollen, Understanding power quality problems, Wiley - IEEE press, 2019
3. Ghosh Arindam, Ledwich Gerard, Power Quality Enhancement Using Custom Power Devices, Springer, 2002.

Reference Books:

1. Hirofumi Akagi, Edson Hirokazu Watanabe, Mauricio Arede, Instantaneous Power Theory and Applications to Power Conditioning, Wiley-IEEE Press, 2017.
2. J. Arrillaga, N.R. Watson, Power System Harmonics, Wiley, 2003, 2nd Edition.
3. Mahesh Kumar Mishra, Power Quality in Power Distribution Systems Concepts and Applications, CRC Press, 2023
4. Ghosh Arindam, Ledwich Gerard, Power Quality Enhancement Using Custom Power Devices, Springer, 2009.

2. <https://archive.nptel.ac.in/courses/108/107/108107157/>
3. <https://archive.nptel.ac.in/courses/108/106/108106025/>

Electric Vehicles

Pre-Requisites: EE1202 & EE1203

Course Outcomes:

CO-1	Understand the concepts of electric vehicles, hybrid electric vehicles and their impact on environment
CO-2	Analyze the drive-train topologies and advanced propulsion techniques
CO-3	Analyze hybrid energy storage methodologies
CO-4	Identify the suitable power converter topologies for motor control and hybrid energy storage

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	1	1	1	1	1	1	1	1	3	2
CO-2	3	3	3	3	1	1	1	1	1	1	1	1	3	2
CO-3	3	3	3	3	1	1	1	1	1	1	2	1	3	2
CO-4	3	3	3	3	3	1	1	1	1	1	3	3	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: Conventional vehicle, basics of vehicle performance, History of electric vehicles, social and environmental importance of electric vehicles, impact of modern drive- trains on energy supplies.

Hybrid Electric Vehicles: Micro hybrid vehicles, mild hybrid vehicles, full hybrid vehicles, configuration of hybrid electric Vehicles -Parallel hybrid, series Hybrid, Series-Parallel Hybrid, Complex Configuration. Power flow diagrams Hybrid electric vehicle configurations for various operating modes. Plug-in Hybrid Vehicles: Operating principle, architectures: series-parallel-series-parallel, challenges related to grid connection. Range-extended Electric Vehicles: Classification and configurations, Fuel Cell Electric Vehicles, Solar electric Vehicles, Electric Bi-cycles and their propulsion systems, Vehicle-to-grid, vehicle-to-home concepts, Electric Hybrid electric vehicles-configurations, Solar powered vehicles.

Electric drive-trains: Basic concept of electric traction, introduction to various electric drive- train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis

Electric propulsion unit: Electric components used in electric vehicles, Configuration and control schemes of DC Motor drives, Induction Motor drives, BLDC motor drives, Permanent Magnet Motor drives, Switch Reluctance Motor drives.

Energy Storage: Storage requirements for Electric Vehicles, Battery energy storage, Fuel Cell based energy storage, Super Capacitor based energy storage and Super Magnetic Energy storage (SMES). Power pack management systems, Active and passive Cell balancing techniques. Hybridization of different energy storage devices, Flywheel based energy storage, compressed air storage systems, super magnetic storage systems.

Converters for Hybrid Energy Storage Systems: Converter configurations for hybrid energy systems based on Battery and Ultra Capacitors-cascaded converter, multiple parallel- connected converter, dual-active-bridge converter, multiple-input converter- multiple modes single converter, interleaved converter, switched capacitor converter, coupled inductor based configurations.

Fundamentals of Chargers: Charger classifications and standards, selection of AC charging systems, DC charging systems, Converter topologies for charging, wireless chargers.

Learning Resources:

Text Books:

1. Ali Emadi, Advanced Electric Drive Vehicles, CRC Press, 2015.
2. Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press, 2021, 3rd Edition.

Reference Books:

1. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi, Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design, CRC Press, 2023, 3rd Edition.
2. James D. Halderman, Curt Ward, Pear Son, Electric and Hybrid Electric Vehicles, 2023, 1st Edition.
3. Aunpam Singh, Electric Vehicles and the end of ICE Age, 2022, 2nd Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/106/108106170/>
2. <https://nptel.ac.in/courses/108/102/108102121/>

Restructured Power Systems

Pre-Requisites: EE1204 & EE1205

Course Outcomes (COs):

CO1	Understand the need for restructured power system and economics.
CO2	Analyze transmission congestion and Estimate loss allocation in Power System
CO3	Analyze Economic operation of power system in restructured environment
CO4	Understand the need of ancillary services and Demand response in a restructured power system

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Restructuring of power industry and Fundamentals of Economics- Introduction, Reasons for restructuring / deregulation of power industry, Fundamentals of Deregulation, Motivation of restructuring the power industries, restructuring process – unbundling & privatization, restructuring models, Components of restructured systems, fundamentals of Economics.

Power Market Reforms- Reforms in Indian power sector, Independent System Operator (ISO): Functions and responsibilities, Smart Grid trading arrangements (Pool, bilateral & multilateral), Open Access Transmission Systems, and Open Access Same Time Information system (OASIS)

Transmission Pricing & Congestion Management- Cost components, Postage Stamp Method, Megawatt Mile Method, Contract Path Method. Classification of congestion management methods, Calculation of ATC-TTC-CBM, Non-market methods, Market based methods, Nodal pricing, Inter-zonal Intra-zonal congestion management, Price area congestion management, Locational Marginal Prices.

Economic Operation in restructured Environment - Economic dispatch problem and methods of solutions, Optimal Power flow (OPF), General OPF formulation, Security constrained OPF, Solution techniques, OPF application in Electricity Market.

Risk Management in Restructured Environment- Energy and Reserve Markets, Market Power, Forward and Future market, Smart grid Optimization with risk constraints-General risk measures, Portfolio selection problem, Financial Transmission Rights.

Ancillary Services Management and Demand Response in Restructured Environment -Reactive power as an ancillary service, Energy Storage System, Power Quality, Reliability analysis, Demand response, Potential benefits of demand response in smart grid, enabling smart technologies for demand response, Demand response for Electric Vehicles.

Impact of Energy Transition on Power System restructuring – Key drivers in energy transition, role of power market in energy transition, re-organizing power systems for the transition.

Learning Resources:

Text Books:

1. L. L. Lai, Power System Restructuring and Deregulation, John Wiley & Sons Ltd., 2012, 1st Edition.
2. K. Bhattacharya, J. E. Daadler, and Math H.J Bollen, Operation of restructured power systems, Kluwer Academic Pub., 2012, 1st Edition (Reprint).
3. D. Kirschen and G. Strbac, Fundamentals of Power System economics, John Wiley & Sons Ltd, 2019, 2nd Edition.

Reference Books:

1. S. Hunt,, Making competition work in electricity, John Wiley & Sons, Inc., 2002, 1st Edition.
2. Ashikur Bhuiya, Power System Deregulation: Loss Sharing in Bilateral Contracts and Generator Profit Maximization, VDM Verlag Publisher, 2008

Other Suggested Readings:

1. <https://archive.nptel.ac.in/courses/108/104/108104052/>
2. <https://archive.nptel.ac.in/courses/108/101/108101005/>

Linear Control System

Pre-Requisites: EE1206

Course Outcomes:

CO-1	Model the dynamical systems using the state-space concept
CO-2	Solve the state space equation and perform the stability analysis
CO-3	Design the control systems using state-space methods
CO-4	Implement the observer based controller concept and optimal control problem

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Mathematical modelling of LTI control systems - impulse response model, differential equation model, transfer function model, frequency response model, state space model-Introduction to state and state variables – State space - physical systems - Representation using state space approach- Modelling of electrical systems

Control system Analysis in state space: State space representations of transfer functions, Solution of state space equation - State transition matrix -Matrix exponential-Controllability and observability

Control system Design in State space: Pole placement approach to Regulator design-Full order observer- Observer based regulator design

Stability concept: Stability in the sense of Lyapunov - stability of linear systems – Lyapunov equation-Generation of Lyapunov functions-Krasovskii's method Quadratic optimal control-Lyapunov's approach to quadratic optimal regulator design.

Learning Resources:

Text Books:

1. Katsuhiko Ogata, Modern Control Engineering, Pearson Education India, 2020, 5th Edition.
2. M. Gopal, Modern Control Systems Theory, New Age International Publisher, 2023, 5th Edition

2. Roy Choudhary, Modern Control Engineering, Prentice Hall India, 2005, 1st Edition.
3. Brogan W. L, Modern Control Theory, Prentice Hall, 2011, 3rd Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108106150>
2. <https://nptel.ac.in/courses/101108057>

EE1422

3-0-0 (3)

HVDC and FACTS**Pre-Requisites:** EE1301, EE1204 & EE1205**Course Outcomes:**

CO-1	Compare HVDC and HVAC transmission systems
CO-2	Analyse converter configurations for HVDC and FACTS and evaluate the performance metrics.
CO-3	Understand controllers for power flow control of dc links and analyse the harmonics introduced in a dc link.
CO-4	Analyze and select a suitable FACTS controller for a given power flow condition

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	1	1	1	1	1	1	1	1	1	1	3	1
CO-2	3	3	2	2	3	1	1	1	1	1	1	1	3	1
CO-3	3	3	3	3	3	2	2	1	1	1	2	1	3	1
CO-4	3	3	3	3	3	1	1	1	3	1	3	2	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

HVDC Transmission: DC Power Transmission: Need for power system interconnections, Evolution of AC and DC transmission systems, Comparison of HVDC and HVAC Transmission systems, Types of DC links, relative merits, Components of a HVDC system, Modern trends in DC Transmission systems

Analysis of HVDC Converters: Pulse number, choice of converter configurations, Analysis of Graetz circuit with and without overlap, voltage waveforms, Analysis of two and three valve conduction mode, Converter Bridge characteristics, Inverter mode of operation, voltage waveforms

HVDC Control: Principles of DC link control, Converter Control characteristics, Control hierarchy Constant current Control, CEA Control, firing angle control of valves, starting and stopping of a dc link, Power control

Harmonics and Filters: Effects of Harmonics, sources of harmonic generation, Types of filters–Design examples

Power Flow Analysis in AC/DC Systems: Modelling of DC links, solutions of AC-DC Power flow

Flexible AC Transmission Systems (FACTS): FACTS concepts and general system conditions: Power flow in AC systems, Relative importance of controllable parameters, Basic types of FACTS controllers, shunt and series controllers, Current source and Voltage source converters (qualitative treatment only).

Static Shunt Compensators: Objectives of shunt compensation, Methods of controllable VAR generation, Static Var Compensator, its characteristics, TCR, TSC, FC-TCR configurations, STATCOM, basic operating principle, control approaches and characteristics

Static Series Compensators: Objectives of series compensator, variable impedance type of series compensators, TCSC, TSSC-operating principles and control schemes, SSSC, Power Angle characteristics, Control range and VAR rating, Capability to provide reactive power compensation, external control

Combined Compensators: Introduction to Unified Power Flow Controller, Basic operating principles, Conventional control capabilities, Independent control of real and reactive power.

Special FACTS devices: TCBR, NGH - SSR damper, SMES, TCPAR and D-FACTS (DSTATCOM & UPQC).

Learning Resources:

Text Books:

1. K.R.Padiyar, HVDC Power Transmission Systems –Technology and System Interactions, New Age International Publishers, 2017, 3rd Edition.
2. Kimbark, Direct Current Transmission, Wiley–Blackwell Publishers, Vol.1, 1971.

Reference Books:

2. FACTS: <https://nptel.ac.in/courses/108/107/108107114/>

EE1424

3-0-0 (3)

Smart Grid Technologies

Pre-Requisites: None

Course Outcomes:

CO-1	Understand features of Smart Grid in the context of Indian Grid.
CO-2	Analyze the role of automation in Transmission/Distribution
CO-3	Apply Evolutionary Algorithms for the Smart Grid/Distribution Generation.
CO-4	Understand operation and importance of PMUs, PDCs, WAMS, Voltage and Frequency control in Micro Grids.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	1	1	1	1	1	1	1	1	1	1	3	1
CO-2	3	3	2	2	3	1	1	1	1	1	1	1	3	1
CO-3	3	3	3	3	3	2	2	1	1	1	2	1	3	1
CO-4	3	3	3	3	3	1	1	1	3	1	3	2	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction to Smart Grid: Introduction to Smart Grid - Working definitions of Smart Grid and Associated Concepts – Smart Grid Functions – Traditional Power Grid and Smart Grid – New Technologies for Smart Grid – Advantages – Indian Smart Grid – dimensions of smart grid-Key Challenges for Smart Grid.

Smart Grid Architecture: Components and Architecture of Smart Grid Design – Review of the proposed architectures for Smart Grid. The fundamental components of Smart Grid designs – Transmission Automation – Distribution Automation – Renewable and distributed energy Integration.

Tools and Techniques for Smart Grid: Computational Techniques – Static and Dynamic Optimization Techniques – Computational Intelligence Techniques – Evolutionary Algorithms-Artificial Intelligence techniques.

Distributed Generation Technologies: Introduction to Renewable Energy Technologies – Micro grids–Storage Technologies –Electric Vehicles and plug – in hybrids – Environmental impact and Climate Change – Economic Issues.

Communication Technologies: Introduction to Communication Technology-Synchro-Phasor Measurement Units (PMUs) – Wide Area Measurement Systems (WAMS).

Control of Smart Grid System and Smart Cities: Load Frequency Control (LFC) in Micro Grid System – Voltage Control in Micro Grid System – Reactive Power Control in Smart Grid. Case Studies and Test beds for the Smart Grids, Smart Grids to the Smart Cities: New Paradigms for Future Networks.

Learning Resources:

Text Books:

EE1426

3-0-0 (3)

Advanced Electrical Drive Systems**Pre-Requisites:** EE1401**Course Outcomes:**

CO-1	Design controllers for closed-loop operation of separately excited DC motor drives
CO-2	Develop high performance induction motor drives using the principles of Scalar control, Vector control and Direct Torque Control
CO-3	Develop the control strategies for doubly fed induction motor drives, VSI fed poly- phase induction motors.
CO-4	Implement control schemes for PMSM, BLDC and Switched Reluctance Motor drives.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	2	2	2	3	1	1	1	2	1	2	2	3	2
CO-2	3	3	2	3	3	1	2	1	2	1	2	2	3	2
CO-3	3	3	2	3	3	1	2	1	2	1	3	2	3	2
CO-4	3	3	2	3	3	1	2	1	2	1	3	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Separately Excited DC-motor Drives: Introduction, Review of DC-motor drives, Speed control of a Separately excited DC motor drive with controlled rectifiers and choppers, Review of controllers, need for anti-windup feature for integral controllers, Speed control of a separately excited DC drive with inner current loop and outer speed loop, Design of current loop with pole- zero cancellation, Design of speed loop with symmetrical optimization technique.

Induction Motor drives: Implementation of V/f control with slip compensation scheme, Review of dq0 model of 3-Ph IM with simulation studies, Principle of vector control of IM, Direct vector control, Indirect vector control with feedback, Indirect vector control with feed-forward, Indirect vector control in various frames of reference, Decoupling of vector control with feed forward compensation, Direct Torque Control of IM, Control of wound rotor induction machine, introduction to five-phase induction motor drives.

Permanent Magnet Drives: Modelling of Permanent Magnet Synchronous Motor (PMSM) in dq0 reference frame, torque equation, field-oriented control (FOC) for PMSM drive with maximum torque per ampere current mode, modelling of brushless direct current motor (BLDC) drives in dq0 reference frame and torque equation.

Switched Reluctance Motor Drives: Torque expression, converters for SRM drives, Control of SRM drives.

Learning Resources:Text Books:

1. Modern Power Electronics & AC Drives, B.K. Bose, Pearson Education India, 2015, 1st Edition.
2. Electric Motor Drives: Modeling, Analysis and Control; R. Krishnan, Pearson Education India, 2015, 1st Edition.

Reference Books:

1. Bin-Wu, High-power Converters and AC Drives, Wiley-Blackwell, 2017, 2nd Edition.

2. M.B. Patil, V. Ramanarayanan, V.T. Ranganathan, Simulation of Power Electronic Circuits, Narosa Publications, 2013.

Other Suggested Readings:

2. nptel.ac.in/courses/108/104/108104011/

EE1428

3-0-0 (3)

State Space Approach to Control Systems**Pre-Requisites:** EE1206**Course Outcomes:**

CO-1	Model and analyze the dynamical systems using state space approach.
CO-2	Determine the zero state and zero input response using the state equation solution
CO-3	Evaluate and analyse the system properties such as controllability and observability
CO-4	Design the state feedback controller to meet the desired specifications

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Dynamical system representation: Classical control review- Linear Time Invariant (LTI) system- Concept of State and State space (SS) approach- State variable selection- Advantages of State space approach- Linearization - Modelling of dynamical systems using SS approach – Different forms of state space representation- Similarity transformation-Invariance of Eigen values- Stability concepts.

State space solution: Solution of the continuous time LTI state equation- Autonomous and Non-autonomous system- Scalar and Matrix cases- State transition matrix (STM) - Important properties of STM- Evaluation methods of the STM- Transfer function from State space model.

Controllability and Observability: Controllability concepts- State controllable and Output controllable- Reachability- Criterion for controllability: Controllability matrix Rank condition, Popov Belevitch Hautus (PBH) criterion- Controllability Gramian –Controllability index- Observability concepts- Constructability- Condition for observability: Observability matrix rank, PBH test- Observability Gramian- Observability index- Pole zero cancellation Vs Controllability and observability

State feedback control : State feedback design for regulator problem - Pole placement approach: Direct substitution, Bass-Gura Approach, Ackermann's formula- Guidelines for desired pole selection- Design of Type-I servo/tracking control: System with Integrator and without integrator- Closed loop stability of system with state feedback controller- Effect of state feedback on Controllability/Observability.

State observer based controller design: Need for state observer- Full order observer for regulator problem Observer pole placement methods: Direct substitution, Bass-Gura Approach, Ackermann's formula-- Guidelines for desired observer pole selection- Separation principle- Full order observer for Type-I servo problem- Minimum/reduced order observer design for regulator problem- Separation property- Stability of Observer based control system- Linear quadratic regulator (LQR) problem.

Learning Resources:**Text Books:**

1. Chi-Tsong Chen, Linear System Theory and Design, Oxford University Press, Oxford, UK, 2013, 4th Edition.
2. M. Gopal, Modern Control Systems Theory, New Age International, 2014 and 3rd Edition.

Reference Books:

1. K. Ogata, Modern Control Engineering, Pearson Education India, 2015 and 5th Edition
2. Richard C. Dorf, Robert H. Bishop, Modern Control Systems, Prentice Hall, 2015 and 13th Edition
3. P.J. Antsaklis and A.N. Michel, A Linear Systems Primer, Springer, 2012 and 1st Edition.

Other Suggested Readings:

EC1462

3-0-0 (3)

VLSI**Pre-Requisites:** EC1262**Course Outcomes:**

CO-1	Understand the output and transfer characteristics of MOSFET
CO-2	Understand the process flow
CO-3	Analyze the static and dynamic characteristics of CMOS circuits
CO-4	Design and implementation of combinational circuits and memories

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	3	2	-	2	-	-	-	-	-	-	1	2	1
CO-2	2	3	2	-	2	-	-	-	-	-	-	1	2	1
CO-3	2	2	2	-	2	-	-	-	-	-	-	1	2	1
CO-4	2	2	2	-	2	-	-	-	-	-	-	1	2	1

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

MOS Transistor Theory: Introduction to metal oxide semiconductor (MOS) structure, Fabrication process flow- basic steps, NMOS/PMOS process, MOSFET, Long channel I-V characteristics, C-V characteristics, non-linear I-V effects, DC transfer characteristics.

MOS Inverter (Static Characteristics & Switching Characteristics): Resistive-load inverter, inverter with n-type MOSFET load, CMOS inverter. Delay-time definitions, calculation of delay times, inverter design with delay constraints, switching power dissipation of CMOS inverters.

Combination CMOS Logic Circuits: MOS logic circuits with depletion NMOS loads, CMOS logic circuits, complex logic circuits, CMOS transmission gates (pass gates), ratioed, dynamic and pass transistor logic circuits.

Memories: SRAM, DRAM.

Learning Resources:Text Books::

1. Sung-Mo Kang and Yusuf Leblebici, CMOS Digital Integrated Circuit Analysis and Design, McGraw-Hill, 2003, 3rd Edition.

2. Fundamentals of Modern VLSI Devices By Yuan Taur, Tak H. Ning - 2021, Cambridge University Press

Control and Integration of Renewable Energy Sources

Pre-Requisites: None

Course Outcomes:

CO-1	Understand different renewable energy sources and storage devices
CO-2	Model and simulate renewable energy sources
CO-3	Analyze and simulate control strategies for grid connected and off-grid systems
CO-4	Develop converters to comply with grid standards to obtain grid integration

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	2	2	2	2	3	3	1	1	2	1	2	3	3	3
CO-2	3	2	3	3	3	3	1	1	2	1	2	1	3	3
CO-3	3	2	3	3	3	3	1	1	2	2	1	1	3	3
CO-4	3	2	3	3	3	3	1	2	1	2	2	1	3	3

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: Electric grid, Utility ideal features, Supply guarantee, power quality, Stability and cost; Importance & Effects of Renewable Energy penetration into the grid, Boundaries of the actual grid configuration, Consumption models and patterns.

Dynamic Energy Conversion Technologies: Introduction, types of conventional and nonconventional dynamic generation technologies, principle of operation and analysis of reciprocating engines, gas and micro turbines, hydro and wind based generation technologies.

Static Energy Conversion Technologies: Introduction, types of conventional and nonconventional static generation technologies; Principle of operation and analysis of fuel cell, photovoltaic systems and wind generation technologies; MPPT techniques and its classifications, principle of operation and partial shading effects; Storage Technologies - batteries, fly wheels, super capacitors and ultra-capacitors.

Control Issues and Challenges: Linear and nonlinear controllers, predictive controllers and adaptive controllers, Load frequency and Voltage Control, PLL, Modulation Techniques, Control of Diesel, PV, wind and fuel cell based generators, Dimensioning of filters, Fault-ride through Capabilities.

Integration of Energy Conversion Technologies: Introduction & importance, sizing, Optimized integrated systems, Interfacing requirements, Distributed versus Centralized Control, Grid connected Photovoltaic systems –classifications, operation, merits & demerits; Islanding Operations, stability and protection issues, load sharing, operation & control of hybrid energy systems, Solar Photovoltaic applications. IEEE & IEC standards for renewable energy grid integrations.

Learning Resources:

Text Books:

1. G. Masters, Renewable and Efficient Electric Power Systems, IEEE-John Wiley and Sons Ltd. Publishers, 2013, 2nd Edition.

2. A. Mahaboob Subahani, G. R. Kanagachidambaresan, M. Kathiresh, Integration of Renewable Energy Sources with Smart Grid, Willey 2021.
3. Felix A. Farret, M. Godoy Simoes, Integration of Renewable Sources of Energy, Wiley, 2017, 2nd Edition.

Reference Books:

1. Chetan Singh Solanki, Fundamentals, Technologies & Applications, Solar Photovoltaic, PHI Publishers, 2019, 3rd Edition.
2. Quing-Chang Zhong, Control of Power Inverters in Renewable Energy and Smart Grid Integration, IEEE-John Wiley and Sons Ltd. Publishers, 2013, 1st Edition.
3. Bin Wu, Yongqiang Lang, Navid Zargari, Power Conversion and Control of Wind Energy Systems, IEEE- John Wiley and Sons Ltd. Publishers, 2011, 1st Edition.
4. S. Chowdhury, S. P. Chowdhury, P. Crossley, Microgrids and Active Distribution Networks, IET Power Electronics Series, 2012.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/102/108102145/>
2. <https://nptel.ac.in/courses/103/103/103103206/>

Advanced Control Techniques for Power Converters

Pre-Requisites: None

Course Outcomes:

CO-1	Understand and analyze the different types of converter model and its usage
CO-2	Design the advanced PID controller with its fractional version and resonant controller for converters
CO-3	Design the robust controller for converter using the loop-shaping methods and the Sliding mode control
CO-4	Design the controller using fuzzy logic and AI techniques for converters and drives

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Modeling of Power converters: Types of Models- Linearized Averaged models- Large signal and Small signal models- Switched models- Relation between various model types- Control goals in converter operation- Review of classical control methods.

Advanced PID controller: PID controller-Tuning methods of PID controller- Set point weighting- Integrator Windup- Controller degrees of freedom- Model based Design methods: Direct Synthesis (DS) method, Internal Model Control (IMC) method- Fractional Control System (FOS) -Design of Fractional PID controller- Case Study: PID controller design for DC-DC boost converter.

Resonant Controller: Necessity of resonant controller- Principle of Proportional Resonant (PR) control- Design methods of PR controller- Example of PR controller design for DC-DC boost converter.

Loop-shaping design: Concept of Loop shaping- Robust controller design using the loop shaping methods: H^∞ Control, Quantitative feedback theory (QFT)- Case Study: Loop shaping methods to design the robust controller for DC-DC converter.

Sliding mode controller (SMC): Nonlinear control preliminaries-Types of Uncertainty-Sliding surface design- Stability of SMC- Equivalent control concept- Integral Sliding Mode Control (ISMC) design- Case study: Application of SMC to design the robust controller for DC-DC converter.

Fuzzy logic control and artificial Intelligence (AI) techniques: Introduction to fuzzy logic and AI techniques, application of fuzzy logic to power converters and electric drives, hardware system description, application of AI techniques to electric machines and drives.

Learning Resources:

Real-Time Control of Power Systems

Pre-Requisites: EE1204 & EE1205

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Understand Real Time operation of Power System
CO2	Develop mathematical models for State Estimation and Contingency analysis
CO3	Understand the significance of Power System security
CO4	Investigate the optimal location of measurement devices

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

State Estimation of Power System: Introduction to State Estimation (SE) in Power Systems: Weighted Least Square Estimation (WLS-SE). SE of AC networks: Types of measurements, Linear WLS-SE theory, DC Load flow based WLS-SE, Linearized model of WLS-SE of Non-linear AC power systems, typical results of SE on an AC network. Detection and Identification of bad measurements, Network Observability and Pseudo-measurements, optimal meter placement. Incorporation of PMU data in WLS-SE

Security Analysis of Power System: Concept of security, Security analysis and monitoring, Contingency Analysis for Generator and Line Outages by Fast Decoupled Inverse Lemma based approach, Network Sensitivity factors

Real-Time Control of Power Systems: Introduction, operating states of a Power System

SCADA functions: Introduction to SCADA: Grid Operation & Control, advantages of SCADA operation. Lay out of substation, Main Equipment's in Sub Station, Instrument Transformers, and necessary parameters for Grid operation: Analog Points, Status Points, Alarms, Transducers & their connectivity.

Data Acquisition, Monitoring and Event Processing, Control Functions, Time tagged data, Disturbance data collection and analysis, Reports and Calculations

Human – Machine Interface (HMI): Operator's Console, VDU Display, Operator Dialogs, Mimic Diagram Functions

Remote Terminal Unit (RTU), Phase angle Measurement unit (PMU) & Communication Practices

Major Components: RTU Panel, Interface Panel, D20M Main Processor, Analog Card, Status Card, Control Card, Modems. Types of Communications: Power Line Carrier.

Communications, Microwave, Optical fibre, VSAT Communications. Types of Network Elements in LAN & WAN. Process of Data Communication

Introduction to SCADA protocols and communication standards

Evolution of Protocol for Communication, Protocols -Modbus, Distributed Network Protocol (DNP), IEC 870-5 and 60870 series, IEC-61850, Benefits from IEC (International Electro technical Commission) communication Standards

Load Dispatch Centers: Hierarchy of LDCs, Data Flow, Equipments in LDC: Workstations, FEPS, Routers, Functionalities of Sub LDC-Real time software

Functionalities and operations carried out by Sub LDC, State LDC, Regional LDC and National LDC.

Overview of Computer control of Electrical Power Systems: Evolution of System Control, time scale of system control, online computer control, and Software Elements: State Estimation, Monitoring & Prediction, Generation & Load Control, Security Analysis; Software Coordination & Systems Simulation

Learning Resources:

Text Books:

1. Allen J. Wood, Bruce Wollenberg and Gerald B SheblA, Power System Generation, Operation and Control, John Wiley and Sons, 2013, 3rd Edition.
2. Mini S. Thomas and John D. McDonald, Power System SCADA and Smart Grids, CRC Press, 2015, 1st Edition.
3. Tian Seng Ng, Real Time Power Control Engineering: Systems and Automation Springer, 2016 1st Edition,

Reference Books:

1. John J. Grainger and William D Stevenson Jr, Power System Analysis, McGraw Hill, 2017, ISE.
2. Torsten Cegrell, Prentice, Power System control – Technology, Hall International series in Systems and control Engineering, Prentice Hall International Ltd., 1986.

Other Suggested Readings:

1. <https://archive.nptel.ac.in/courses/108/105/108105133/>
2. <https://nptel.ac.in/courses/108104191>

Distribution System Planning and Automation

Pre-Requisites: EE1204 & EE1205

Course Outcomes (COs):

CO-1	Understand and Characteristics of distribution systems from transmission systems
CO-2	To design, analyze and evaluate distribution system design based on forecasted data
CO-3	Identify and select appropriate sub-station location
CO-4	Design and evaluate a distribution system for a given geographical service area from alternate design alternatives

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	3	1
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	3	2

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Distribution System Planning- Planning and forecasting techniques – Present and future – Role of computers- Load Characteristics- Load forecasting using ANN – Load management – tariffs and metering of energy

Distribution Transformers: Types - Three phase and single phase transformers – connections – causes and types of failures in distribution transformers

Primary distribution systems and Distribution Sub-Stations: Distribution substations –Bus schemes –comparison of switching schemes- Substation location and rating- Types of feeders – voltage levels

Voltage Drop and Power Loss Calculations: Three phase primary lines – Copper loss – Distribution feeder costs – Loss reduction and Voltage improvement in rural networks

Capacitors in Distribution Systems: Effects of series and shunt capacitors – justification for capacitors – Procedure to determine optimum capacitor size and location.

Distribution system management: Integrated sub-station metering system – Revenue improvement – issues in multi-year tariff and availability based tariff

Distribution System Automation: Reforms in power sector – Methods of improvement – Reconfiguration –Automation – Communication systems – Sensors –Basic architecture of Distribution automation system – software and open architecture – RTU and Data communication – SCADA requirement and application functions –Communication media for distribution system automation-Communication protocols for Distribution systems – IEC 61850 and IEEE 802.3 standards

Learning Resources:

Text Books:

1. Juan M. Gers, Distribution Systems Analysis and Automation, IET power series, 2020
2. James Northcote-Green, Robert G. Wilson, Control and Automation of Electrical Power Distribution Systems: Taylor & Fransis, 2006
3. A. S. Pabla, Electric Power Distribution, , TMH, 2000

2. Turan Gonen, Electric Power Distribution Engineering, Mc-Graw Hill, 2014

Other Suggested Readings:

1. https://onlinecourses.nptel.ac.in/noc22_ee35

EE26030

3-0-0 (3)

Evolutionary Algorithms Applications in Power Engineering**Pre-Requisites:** EE1204 & EE1205**Course Outcomes:**

CO-1	Discriminate the capabilities of bio-inspired system and conventional methods in solving optimization problems
CO-2	Examine the importance of exploration and exploitation of evolutionary algorithm to attain near global optimal solution
CO-3	Distinguish the functioning of various evolutionary algorithms
CO-4	Employ various bio-inspired algorithms for Power Engineering applications

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-2	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-3	3	3	3	3	3	3	3	1	2	1	2	3	3	3
CO-4	3	3	3	3	3	3	3	1	2	1	2	3	3	3

1 - Slightly;**2 - Moderately;****3 - Substantially****Syllabus:**

Fundamentals Of Soft Computing Techniques- Definition-Classification of optimization problems- Unconstrained and Constrained optimization Optimality conditions- Introduction to intelligent systems- Soft computing techniques- Conventional Computing versus Swarm Computing - Classification of meta-heuristic techniques - Single solution based and population based algorithms – Exploitation and exploration in population based algorithms - Properties of Swarm intelligent Systems - Application domain - Discrete and continuous problems - Single objective and multi-objective problems.

Genetic Algorithm and Particle Swarm Optimization-Genetic algorithms- Genetic Algorithm versus Conventional Optimization Techniques - Genetic representations and selection mechanisms; Genetic operators- different types of crossover and mutation operators -Bird flocking and Fish Schooling – anatomy of a particle- equations based on velocity and positions -PSO topologies - control parameters – GA and PSO algorithms for solving ELD problem.

Artificial Bee Colony Algorithm and Differential Evolution - Artificial bee colony (ABC) algorithms-binary ABC algorithms – ACO and ABC algorithms for solving Economic Dispatch of thermal units. The Motivation for Differential Evolution (DE), Introduction to Parameter Optimization, Single-Point, Derivative-Based Optimization, Local Versus Global Optimization, Differential Mutation, Recombination, Selection, Benchmarking Differential Evolution, DE Versus Other Optimizers, DE on Parallel Processors.

Shuffled Frog-Leaping Algorithm and Bat Optimization Algorithm- Bat Algorithm- Echolocation of bats- Behaviour of microbats- Acoustics of Echolocation- Movement of Virtual Bats- Loudness and Pulse Emission- Shuffled frog algorithm-virtual population of frogs-comparison of memes and genes -memeplex formation- memeple updation- BA and SFLA algorithms for solving ELD and optimal placement and sizing of the DG problem.

Multi Objective Optimization- Multi-Objective optimization Introduction- Concept of Pareto optimality - Non-dominant sorting technique-Pareto fronts-best compromise solution- min-max method-NSGA-II algorithm and applications – Control of Power Converters.

Learning Resources:

Text Books:

1. <https://archive.nptel.ac.in/courses/112/103/112103301/>

Open Electives

Classical Control System

Pre-Requisites: None

Course Outcomes (COs):

CO-1	Model and Analyze the dynamical Systems using Transfer Function method.
CO-2	Determine Transient & Steady-State behaviors of dynamical systems.
CO-3	Analyze the steady state errors, absolute/relative stability of dynamical systems in time domain and in frequency domain.
CO-4	Model the dynamical systems using the state space approach.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Introduction: System, control system, representation of control system types of control systems, Open-loop and closed loop systems, Types of feedback, feedback and its effects, Laplace transform.

Modelling of Dynamical Systems: Mathematical modelling of Electrical and Electro- mechanical systems, Liquid level system, Automotive Systems, Hydraulic systems, Linearization concept.

Techniques to Develop Transfer Function of Systems: Block diagram reduction technique, signal flow graph and Mason's gain formula.

Time Domain Analysis: Test signals, time domain indices, steady state error constants, concept of BIBO stability, absolute stability. Routh- Hurwitz Criterion.

Root Locus Techniques: Introduction, Root loci theory, rules to plot the root locus, application to system stability analysis.

State-Space Representation of Dynamical Systems: Importance of States and its advantages, state space representation of dynamical systems.

Frequency Domain Analysis: Introduction, Bode plots, Frequency domain indices, application of Bode plots, Polar/Nyquist plots, Principle of PID controller.

Learning Resources:

Text Books:

1. Norman S. Nise, Control Systems Engineering, Wiley Publications, 2019, 7th Edition.
2. I.J. Nagarath and M.Gopal, Control Systems Engineering, New Age Pub. Co, 2017, 6th Edition.
3. B.C. Kuo, Automatic Control Systems, Wiley, 2014, 9th Edition.

Reference Books:

1. Katsuhiko Ogata, Modern Control Engineering, Pearson Education India, 2015, 5th Edition.
2. Richard C. Dorf, Robert H. Bishop, Modern Control Systems, Prentice Hall, 2015, 13th Edition.
3. K.J. Astrom, R.M. Murray, Feedback Systems- An Introduction for Scientists and Engineers, 2011, 2nd Edition.

Other Suggested Readings:

Swarm Intelligence Techniques

Pre-Requisites: None

Course Outcomes (COs):

CO-1	Understand the concepts of population-based optimization techniques.
CO-2	Examine the importance of exploration and exploitation in heuristic optimization techniques to attain near-global optimal solution.
CO-3	Evaluate the importance of parameters in heuristic optimization techniques.
CO-4	Apply for the solution of multi-objective optimization.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Fundamentals of soft computing techniques: Definition - Classification of optimization problems, Unconstrained and Constrained optimization Optimality conditions, Introduction to intelligent systems Soft computing techniques, Conventional computing techniques versus Soft computing techniques – Classification of meta-heuristic techniques, Single solution based and population based algorithms, Exploitation and exploration in population based algorithms, Properties of Swarm intelligent Systems – Application domain, Discrete and continuous problems - Single objective and multi-objective problems.

Genetic algorithm and particle swarm optimization: Genetic algorithms - Genetic Algorithm versus Conventional Optimization Techniques, Genetic representations and selection mechanisms, Genetic operators- different types of crossover and mutation operators, Bird flocking and Fish Schooling, Anatomy of a particle - equations based on velocity and positions, PSO topologies - control parameters, Application to SINX maximization problem,

Ant colony optimization and artificial bee colony algorithms: Biological ant colony system, Artificial ants and assumptions – Stigmergic communications, Pheromone updating- local - global - Pheromone evaporation - ant colony system ACO models, Touring ant colony system - max min ant system - Concept of elistic ants, Task partitioning in honey bees - Balancing foragers and receivers – Artificial bee colony (ABC) algorithms - binary ABC algorithms, ACO and ABC algorithms for solving SINX maximization problem.

Shuffled frog-leaping algorithm and bat optimization algorithm: Bat Algorithm - Echolocation of bats - Behavior of microbats - Acoustics of Echolocation, Movement of Virtual Bats - Loudness and Pulse Emission, Shuffled frog algorithm - virtual population of frogs comparison of memes and genes, Memplex formation - memplex updation, BA and SFLA algorithms for solving SINX maximization problem, Application to multi-modal function optimization, Introduction to Multi-Objective optimization, Concept of Pareto optimality.

Learning Resources:

Text Books:

1. Xin-She Yang, Recent Advances in Swarm Intelligence and Evolutionary Computation, Springer International Publishing, Switzerland, 2015.
2. Kalyanmoy Deb, Multi-Objective Optimization using Evolutionary Algorithms, John Wiley & Sons, 2001.

Reference Books:

1. N P Padhy, Artificial Intelligence and Intelligent Systems, Oxford University Press, 2005.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/103/103/103103164/>
2. <https://nptel.ac.in/courses/112/105/112105235/>
3. <https://nptel.ac.in/courses/106/105/106105173/>

Entrepreneurial Venture Creation

Pre-Requisites: None

Course Outcomes (COs):

CO-1	Understand the process and practice of entrepreneurship and new venture creation
CO-2	Identify entrepreneurial opportunities, preparation of a business plan for launching a new venture
CO-3	Explore the opportunities in the domain of respective engineering disciplines for
CO-4	launching a new venture

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Entrepreneur and Entrepreneurship: Entrepreneurship and Small-Scale Enterprises (SSE); Role in Economic Development, Entrepreneurial Competencies; Institution Interface for SSE

Establishing the small-scale enterprise: Opportunity Scanning and Identification; Market Assessment for SSE; Choice of Technology and Selection of Site; Financing the New/Small Enterprises; Preparation of the Business Plan; Ownership Structures and Organizational Framework

Operating the small-scale enterprises: Financial Management Issues in SSE; Operational Management Issues in SSE; Marketing Management Issues in SSE; Organizational Relations in SSE

Case Studies: Selected Success Stories of Contemporary Entrepreneurs for imbibing positive psychology among the students for launching new ventures.

Learning Resources:

Text Books:

- 1 New Venture Management: The Entrepreneur's Roadmap, Kuratko, Pearson, 2008.
- 2 Entrepreneurship: New Venture Creation, Holt, PHI(P) Ltd., 2001.

Reference Books:

1. Madhulika Kaushik, Management of New & Small Enterprises, IGNOU course material, 1995.
2. B S Rathore, S Saini, Entrepreneurship Development Training Material, TTTI, Chandigarh, 1988.
3. P C Jain, A Hand Book for New Entrepreneurs, EDI-Faculty & External Experts, EDII, Ahmedabad, 1986.
4. J B Patel, D G Allampalli, A Manual on How to Prepare a Project Report, EDII, Ahmedabad, 1991.

5. J B Patel, A Manual on Business Opportunity Identification and Selection, EDII, Ahmedabad, 1995.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/106/105/106105166/>

Principles of Electric Power Conversion

Pre-Requisites: None

Course Outcomes (COs):

CO-1	Understands the basics in the electric power conversion using power switching devices.
CO-2	Analyse the control of electrical machines.
CO-3	Evaluate the conversion for range of renewable energy sources with the help of available electrical machines drives.
CO-4	Analyze the different energy storage systems and Identify Industrial and domestic applications.

Course Articulation Matrix:

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12	PSO-1	PSO-2
CO-1	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-2	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-3	3	3	3	3	3	1	1	1	2	1	1	2	-	-
CO-4	3	3	3	3	3	1	1	1	2	1	1	2	-	-

1 - Slightly;

2 - Moderately;

3 - Substantially

Syllabus:

Power electronic devices and converters: V-I Characteristics of SCR, MOSFET and IGBT. Phase controlled rectifiers, DC-DC converters and Inverters.

Applications to electric drives: Speed control of DC motor, Induction motors, PMSM and BLDC drives

Applications to renewable energy: Introduction to solar cell, solar panels, MPPT, wind and other renewable energy sources, Integration of renewable energy sources to the grid.

Energy storage systems: Study of automotive batteries, SMF, pumped storage systems, super-capacitors, fly wheels - applications, Li-ion batteries and applications to electric vehicles.

Domestic and industrial applications: Induction heating, melting, hardening, lighting applications and their control, UPS, battery chargers.

Learning Resources:

Text Books:

1. M.H. Rashid, Power Electronics-circuits, Devices and applications, Prentice Hall India, NewDelhi, 2009.
2. P.S. Bhimbra, Power Electronics, Khanna publishers, New Delhi, 2012.

Reference Books:

1. Ned Mohan, Undeland and Robbin, Power electronics converters, applications and design, John Willey & Sons, Inc. New York, 2006.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/104/108104140/>
2. <https://nptel.ac.in/courses/108/105/108105060/>

Minor: Electrical Engineering

EE1M01

3-0-0 (3)

Electrical Measurement Techniques

Pre-Requisites: None

Course Outcomes:

CO-1	Evaluate the performance of PMMC, MI, dynamometer & induction type measuring instruments.
CO-2	Determine the circuit parameters using AC and DC bridges.
CO-3	Compute the errors in CTs and PTs.
CO-4	Select transducers to measure temperature, displacement, strain, angular velocity.

Syllabus:

Introduction: Definitions: Accuracy, tolerance, sensitivity, reproducibility, absolute and secondary measuring instruments, recording instruments.

Analog Ammeters and Voltmeters: PMMC and MI instruments: construction, torque equation, range extension, advantages and disadvantages.

Analog Wattmeter and Power Factor Meters: Electrodynamometer type wattmeter and power factor meter: construction, working, torque equation, advantages and disadvantages; Measurement of active and reactive power in single phase; Measurement in three phase.

Analog Energy Meter: Single phase induction type energy meters, construction, working, lag adjustments, errors; Maximum demand indicators.

Electrical Bridges: DC bridges: Wheatstone, Kelvin's, Kelvin's double bridge, Megger, Earth resistance measurement; AC bridges: Maxwell's, Anderson, Schering; Applications and limitations.

Instrument Transformers: Construction, working, testing & applications of current transformer and potential transformer.

Transducers: Thermistor, RTD, thermocouple, LVDT, strain gauge, piezoelectric transducers, digital shaft encoders, tachometer, Hall Effect sensors.

Electronic Instruments: Digital voltmeters, Digital Energy Meter, CRO, measurement of voltage and frequency, Lissajous patterns, wave analyzers, harmonic distortion analyzer, LCRQ-meter.

Learning Resources:

Text Books:

1. A. K. Sawhney, A Course in Electrical Measurements, Electronic Measurements and Instrumentation, Dhanpat Rai and Co., 2015.
2. William D. Cooper, Albert D. Helfrick Modern Electronic instrumentation and Measurements Techniques, Prentice Hall of India Pvt. Ltd. 2002.
3. Prithwiraj Purkait, Budhaditya Biswas, Santanu Das, Chiranjib Koley, Electrical and Electronics Measurements and Instrumentation, McGraw Hill Education (India) Private Limited, 2013.

Reference Books:

1. E.W. Golding, F.C. Widdis, Electrical Measurements and Measuring Instruments, Reem Publications, 2011.
2. Ernest O. Doebelin, Measurement Systems-Applications and Design, McGraw-Hill College, 1989, 4th Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/105/108105153/>

Elements of Electrical Power Systems

Pre-Requisites: None

Course Outcomes:

CO-1	Understand the operation of conventional generating stations and renewable sources of electrical power
CO-2	Analyze the power economics and power tariff methods
CO-3	Identify the types of insulators and its working
CO-4	Evaluate power system sustainability and reliability

Syllabus:

Introduction: Typical Layout of an Electrical Power System Present Power Scenario in India.

Generation of Electric Power (Qualitative): Conventional Sources: Hydro station, Steam Power Plant, Nuclear Power Plant and Gas Turbine Plant. **Renewable energy Sources:** Wind Energy, Fuel Cells, and Solar Energy, Tidal

Economics of Generation: Introduction, definitions of connected load, maximum demand, demand factor, load factor, diversity factor, Load duration curve, number and size of generator units. Base load and peak load plants. Cost of electrical energy-fixed cost, running cost, Tariff on charge to customer.

AC Distribution: Introduction, single line diagram of a typical power system, AC distribution, Single phase, 3-phase, 3 phase 4 wire system, bus bar arrangement, Selection of site and layout of substation,

Overhead Line Insulators: Introduction, types of insulators, Potential distribution over a string of suspension insulators, Methods of equalizing the potential, testing of insulators.

Insulated Cables: Introduction, insulation, insulating materials, Extra high voltage cables, grading of cables, insulation resistance of a cable, Capacitance of a single core and three core cables, Overhead lines versus underground cables, types of cables.

Sustainability of Power System: environmental sustainability, economic sustainability, social sustainability, concept of power system reliability

Technology Drivers (Qualitative): Technologies associated with Distributed energy Resources (e.g. Fuel cells, Microturbines, Solar PV)

Learning Resources:

Text Books:

1. C.L. Wadhwa, Generation, Distribution and Utilization of Electrical Energy, New-Age International, 2009, 2nd Edition.
2. C.L. Wadhwa, Electrical Power Systems, New-Age International, 2009, 5th Edition.
3. W.D. Stevenson, Elements of Power System Analysis, McGraw Hill, 1984, 4th Edition.

2. https://onlinecourses.nptel.ac.in/noc19_ee62/preview

EE1M03

3-0-0 (3)

Power Converters and Applications

Pre-Requisites: None

Course Outcomes:

CO-1	Select switching devices for a given power converter.
CO-2	Evaluate the performance of phase-controlled rectifiers.
CO-3	Identify and design DC-DC converter for a given application.
CO-4	Analyze & evaluate the Inverters and ac voltage controllers for a given application.

Syllabus:

Introduction: Concept of power electronics, scope and applications, types of power converters, power semiconductor switches and V-I characteristics: Diodes, SCR, TRIAC, power MOSFET, IGBT devices and applications. Line commutation of SCR, gate drive circuit.

Phase-Controlled Rectifiers: Principles of single-phase full- & half-controlled converter with R, RL, and RLE load, Principles of three- phase fully controlled converter operation with RLE load, and applications.

DC-DC Converters: Introduction, chopper classification of choppers, Basic principles of step-down and step-up operation, study of Buck, Boost and Buck-Boost converters and applications.

Inverters: Introduction, principle of operation, performance parameters, single phase bridge inverters with R, RL and RLC loads, 3-phase bridge inverters-180 and 120 degrees mode of operation, voltage control of single phase inverters-single pulse width modulation, sinusoidal pulse width modulation and applications.

A.C. Voltage Controllers: Introduction, principle of operation of single-phase voltage controllers for R, R-L & R-L-E loads and applications.

Learning Resources:

Text Books:

1. M.H. Rashid, Power Electronics - Circuits, Devices and Applications, Pearson Education; 28 November 2017, 4th Edition.
2. L. Umanand, Power Electronics: Essentials & Applications, Wiley publishers, Kindle Edition, 1 January 2009.

Reference Books:

1. Philip T. Krein, Elements of Power Electronics, Oxford University Press, Indian Edition, 1 November 2017, 2nd Edition.
2. Mohan Undeland Robin, Power Electronics - Converters, Applications and Design, John Wiley & Sons, 2006.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/101/108101038/>

EE1M04

3-0-0 (3)

Industrial Applications of Electrical Energy

Pre-Requisites: None

Course Outcomes:

CO-1	Understand basic principles of electric heating and welding.
CO-2	Determine the lighting requirements for flood lighting, household and industrial needs
CO-3	Estimate heat developed in induction furnace.
CO-4	Evaluate power requirement in electrolytic processes & speed time curves for traction.

Syllabus:

Illumination Science: Laws of illumination, coefficient of Utilization and depreciation, Polar curves, photometry, integrating sphere, sources of light, fluorescent lamps, compact fluorescent lamps, LED lamps discharge lamps, mercury vapour lamps, sodium vapour lamps and neon lamps, comparison between tungsten filament lamps and fluorescent tubes. Basic principles of light control, Types and design of lighting scheme, lighting calculations, factory lighting, street lighting and flood lighting.

Electric Heating: Principles of Electric Heating, Various Schemes and methods of Resistance heating- Direct and Indirect heating, Induction heating, Dielectric heating and Microwave heating. Applications of Heating and modern heating methods. Simple problems.

Electric Arc Welding: Electric welding equipment, resistance welding and arc welding, comparison between AC and DC welding.

Electrolytic Process: Basic principles, Faraday's law of Electrolysis, Electro deposition, Extraction and refining of metals, Power supply of Electrolytic processes.

Electric Traction: Systems of electric traction and track electrification- DC system, single phase and 3-phase low frequency and high frequency system, composite system, kando system, comparison between AC and DC systems, problems of single-phase traction with current unbalance and voltage unbalance. Systems of train lighting, special requirements of train lighting, methods of obtaining unidirectional polarity constant output- single battery system, Double battery parallel block system, coach wiring, lighting by making use of 25 kV AC supply, Speed control of Traction motors(DC Series motors) series-Parallel connection, Shunt Transition, Bridge Transition. Problems on series-parallel control.

Learning Resources:

Text Books:

1. H. Partab, Art and Science of Utilization of Electrical Energy, Dhanpat Rai & Sons, 2017.
2. H. Partab, Modern Electric Traction, Dhanpat Rai & Co, 2017.
3. E. Openahaw Taylor, Utilisation of Electric Energy, Orient Longman, 1971.

Reference Books:

2. N.V. Suryanarayana, Utilisation of Electrical power including Electric drives and Electric Traction, New Age Publishers, 2017, 2nd Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/105/108105060/>
2. <https://www.youtube.com/watch?v=mX8k3xrOXwg>

EE1M05

3-0-0 (3)

Elements of Smart Grid Systems

Pre-Requisites: Elements of Electrical Power Systems

Course Outcomes:

CO-1	Understand the features of Smart Grid
CO-2	Assess the role of digitization in Transmission and Distribution
CO-3	Analyse Smart grids and Distributed energy resources (DER) with evolutionary algorithms
CO-4	Investigate the importance of data acquisition devices in smart grids.

Syllabus:

Introduction: Basics of power systems, definition of smart grid, need for smart grid, smart grid domain, enablers of smart grid, smart grid priority areas, regulatory challenges, Role of non-conventional Energy sources in smart grid, smart-grid activities in India.

Smart Grid Architecture and elements: Smart grid architecture, power line communications, supervisory control and data acquisition system (SCADA), advanced metering infrastructure (AMI).

Advanced Electricity pricing- Demand Response.

Clean and Green Energy Sources: Introduction to Distribution Energy Sources, Renewable Energy Technologies – Microgrids – Storage Technologies – Electric Vehicles and plug – in hybrids – Environmental impact and Climate Change – Economic Issues.

Smart Grid Communication: Introduction to Communication Technology, Synchro- Phasor Measurement Units (PMUs) – Wide Area Measurement Systems (WAMS)-

Introduction to Internet of things (IoT)- Applications of IoT in Smart Grid.

Smart-cities: Smart city pilot projects, essential elements of smart cities, active distribution networks,

Computational Tools for Smart Grid: Static and Dynamic Optimization Techniques for power applications such as Economic load dispatch – Artificial Intelligence techniques and applications in power system. Evolutionary Algorithms in power system.

Learning Resources:

Text Books:

- 1 Krishan Arora, S Lata Tripathi, S Padmanaban, Smart Electric Grid systems: Design Principle, Modernization and Techniques, CRC Press, New York, 2023.
- 2 K S Manoj, Smart Grid: Concepts To Design, Kindle edition, 2019.

Reference Books:

1. A.G. Phadke and J.S. Thorp, Synchronized Phasor Measurements and their Applications, Springer, 2017, 2nd Edition.
2. T. Ackermann, Hoboken, Wind Power in Power Systems, N J, USA, John Wiley, 2012, 2nd Edition.

Other Suggested Readings:

2. https://onlinecourses.nptel.ac.in/noc21_ee68/preview
3. <https://www.coursera.org/lecture/electric-power-systems/smart-grid-utilities-consumers- TSfBn>

Honors: Electrical & Electronics Engineering

High Power Inverters

Pre-Requisites: EE1301

Course Outcomes:

CO-1	Analyze the Weighted THD and implement SVM based on instantaneous phase reference voltages
CO-2	Implement level-shifted, phase-shifted, hybrid and Space Vector PWM schemes for Cascaded H-Bridge Multilevel Inverters
CO-3	Develop PWM schemes to balance the neutral point, eliminate common mode voltage and reduce the switching power loss in diode clamped multilevel inverter
CO-4	Develop reduced switch count MLIs and PWM current source inverters

Syllabus:

Introduction: Review of two-level inverters and their PWM schemes. Effect of dead-time and compensation in two-level inverters. Limitations of two-level inverters and introduction to multilevel inverters. Conventional multilevel inverter topologies.

Diode clamped multilevel inverter (DCMLI): 3, 4 and 5 level DCMLIs, level-shifted PWM, Neutral point voltage balance, SVM and discontinuous SVM, Elimination of common mode voltage, Active Neutral Point Clamped Inverter (ANPCI).

Cascade H-bridge (CHB) multilevel inverter (MLI): Symmetrical and asymmetrical topologies, level-shifted PWM, phase-shifted PWM, hybrid PWM and SVM. Concept of coupling transformer-less grid connected applications, Topologies of modular multilevel inverters (MMI).

Reduced switch count MLIs: Introduction, classification, operation of T-type, multilevel dc link, switched series parallel source and other topologies.

PWM current source inverters: Trapezoidal modulation, selective harmonic elimination and SVM, Load-commutated inverters (LCI).

Learning Resources:

Text Books:

1. Bin Wu, High Power Converters and AC Drives, Wiley-Inter science, 2017, 2nd Edition.
2. D. Grahame Holmes, Thomas A. Lipo, Pulse Width Modulation for Power Converters: Principles and Practice, Wiley-IEEE Press, 2003.

Reference Books:

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/102/108102157/>

Digital Control Systems

Pre-Requisites: EE1206

Course Outcomes:

CO-1	Model the discrete time (DT) system in state space form
CO-2	Perform the stability analysis for DT dynamical system
CO-3	Design the state feedback control for DT system
CO-4	Formulate and solve the DT optimal control problems

Syllabus:

Introduction: Continuous and Discrete time system-Digital control systems - Quantizing and quantization error, Sampling theorem.

Z-Transform: Z-transforms of elementary functions, important properties and theorems, Inverse Z-transform, Z-transform method of solving difference equations.

Z-Plane Analysis of Discrete-Time Control Systems: Impulse sampling and data hold, Pulse transfer function, Realization of digital controllers and digital filters, Mapping between s-plane and z-plane, Stability analysis of closed loop systems in z-plane, Transient and steady state analyses.

State Space Analysis of digital control systems: Solution of discrete time state space equations, Discretization of continuous time state space equations, Lyapunov stability analysis for Discrete linear system, Controllability, Observability, Pole Placement and Observer Design.

Discrete Optimal Control Systems: Linear Quadratic Regulator (LQR) Design via pole placement, Steady state quadratic optimal control.

Learning Resources:

Text Books:

1. K. Ogata, Discrete time control systems, Pearson Education India, 2015, 2nd Edition.
2. M. Gopal, Digital Control and State Variable Methods, McGraw Hill Education, 2017, 4th Edition.

Reference Books:

1. C.L. Phillips, H.T. Nagle, A. Chakraborty, Digital Control System Analysis and Design, Pearson, 2014, 4th Edition.
2. B.C. Kuo, Digital Control Systems, Oxford University Press, 2012, 2nd Edition.
3. C.A. Rabbath, N. Lechevin, Discrete-Time Control System Design with Applications, Springer-Verlag New York Inc, 2014, 1st Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108105186>
2. <https://nptel.ac.in/courses/108103008>

Power Quality Improvement Techniques

Pre-Requisites: EE1301

Course Outcomes:

CO-1	Identify power quality problems in distribution system
CO-2	Evaluate power quality indices in distribution system
CO-3	Develop mitigation techniques for compensating devices to improve power quality in distribution system
CO-4	Suggest compensating devices to improve power quality in distribution system

Syllabus:

Power Quality: Significance of power quality, Power quality terms: Transients, Long- duration voltage variations, Short-duration voltage variations, Voltage imbalance, Waveform distortion, Voltage fluctuation, CBEMA and ITI curves. Devices for Overvoltage Protection: Surge arresters and transient voltage surge suppressors, Isolation transformers and Low-impedance power conditioners.

Waveform Distortion: Introduction, Voltage versus current distortion, Harmonics versus transients, Harmonics indices: Total Harmonics Distortion (THD) and Total Demand distortion (TDD); Harmonic standards; Harmonic analysis; Harmonic phase sequence; Triplen harmonics; Interharmonics.

Harmonic Sources: Introduction; Harmonics generated from electrical machines such as transformers and rotating machines; Arcing devices; Static power conversion: Phase controlled and uncontrolled rectifiers, AC voltage regulators, Pulse width modulated inverters; Converter fed ac and dc drives.

Effects of Harmonic Distortion: Introduction; Resonances; Effects of harmonics on rotating machines; Effect of harmonics on static power plant; Power assessment with distorted waveforms; Effect of harmonics on measuring instruments; Harmonic interference with ripple control systems; Harmonic interference with power system protection; Effect of harmonics on consumer equipment; Interference with communication systems.

Harmonic Elimination: Introduction; Passive power filters: Design, A Shunt active power filters: Configurations, State of the art, Design and control strategies. Three-phase four-wire shunt active power filters

Voltage Quality: Introduction; Sources of Sags, Swell, Unbalance and Flicker; Voltage quality standards; Effects of sags, Swell, Unbalance and Flicker; Voltage sag magnitude due to fault; Voltage sag magnitude calculation based on influence of cross section of conductor, transformer and fault levels; Critical distance for a voltage sag magnitude; Causes of phase-angle jumps in voltage; Classification of voltage sags, voltage sag transformation due to transformers.

Methods for improving Voltage Quality: Introduction; Dynamic Voltage Restorer (DVR): Operating principle, Configurations, State of the art, Design and control strategies. Three-phase four-wire DVR.

Unified Power Quality Conditioner (UPQC): Introduction; design and control; Three- phase three-wire UPQC and three-phase four-wire UPQC topologies, Multilevel inverters based UPQC topologies, Mitigation of Flicker.

Learning Resources:

Text Books:

1. Bhim Singh, Ambrish Chandra, Kamal Al-Haddad, Power Quality: Problems and Mitigation Techniques, Wiley, 2015.
2. Math H. J. Bollen, Understanding power quality problems, Wiley-IEEE Press, 2000, 1st Edition.

3. Mahesh Kumar Mishra, Power Quality in Power Distribution Systems Concepts and Applications, CRC Press, 2023.

Reference Books:

1. Ghosh Arindam, Ledwich Gerard, Power Quality Enhancement Using Custom Power Devices, Springer, 2009.
2. Hirofumi Akagi, Edson Hirokazu Watanabe, Mauricio Aredes, Instantaneous Power Theory and Applications to Power Conditioning, Wiley-IEEE Press, 2017.
3. Roger C. Dugan, Mark F. McGranaghan, Surya Santoso and H. Wayne Beaty, Electrical Power Systems Quality, McGraw Hill, 2012, 3rd Edition.
4. J. Arrillaga, N.R. Watson, Power System Harmonics, Wiley, 2003, 2nd Edition.

Other Suggested Readings:

1. <https://nptel.ac.in/courses/108/107/108107157/>
2. <https://nptel.ac.in/courses/108/106/108106025/>

Advanced Computational Methods in Power Systems

Pre-Requisites: EE1204 & EE1205

Course Outcomes:

CO-1	Develop mathematical models for load flow studies for Transmission and Distribution systems and Fault analysis
CO-2	Prepare the input data required for load flow analysis and fault calculations
CO-3	Apply appropriate algorithms for load flow studies
CO-4	Develop power system software /implementation of algorithm for static power system studies

Syllabus:

Network Matrices: Concept of incidence matrix, formation of A and \hat{A} matrices, list of other types of incidence matrices and their limitations. Representation of Generator, Transmission lines and Transformers, Primitive and Network matrices, Ybus formation by Inspection method and its algorithm. Merits and Demerits of Ybus and Zbus matrices in Power System Analysis – Areas of application

Introduction to Load Flow Analysis: Y-bus based Power System Static Load Flow Equations. Gauss-Seidel (GS) method, PV-bus treatment, Gauss-Seidel load flow algorithm. Need of Sparsity technique for 'well-grown' power systems, Concept of Sparsity technique, Y-bus formation using Sparsity technique. GS with Sparsity technique, Merits and Demerits of GS method

Newton-Raphson (NR) load flow method: and its algorithm. Merits and Demerits of NR method; Newton's Decoupled, Fast Decoupled equation, algorithm of Fast Decoupled (FDC) method. Merits and Demerits of FDC method; Areas of application of load flow study. AC/DC load flow solutions

Distribution system Load Flow methods: Vector based load flow method, Backward-Forward Sweep method and Current injection method

Load flow studies with Renewable Energy Sources: Solar and Wind Energy Sources. Need of short circuit studies – Assumptions in short circuit studies – Areas of application

Formation of Z-bus: using step-by-step approach (Addition of a branch & Addition of a link). Modification of Zbus elements for changes

Symmetrical Sequence Components: significance of symmetrical components, approximations, formation of primitive z^{abc} , y^{abc} , z^{012} and y^{012} for various types of faults

Formation of Zbus⁰¹² : by step-by-step algorithm. Derivation of relevant equations for E^{012} for LLLG and LG faults

Digital Protection of Power Systems

Pre-Requisites: EE1204 & EE1205

Course Outcomes:

CO-1	Recognize the advantages of digital relays over conventional relay
CO-2	Apply the suitable signal processing techniques for protection
CO-3	Understand the adaptive criterion for relay decision making
CO-4	Identify the new developments in protective relaying and applications

Syllabus:

Overview: Static relays Transmission line protection, Transformer protection, Need for digital protection
Introduction to Digital Sub-stations

Digital Relays: Basic elements of a digital relay and their functions, signal conditioning subsystem, conversion subsystem, digital relay subsystem

Signal processing techniques: Sinusoidal based algorithms, Fourier analysis-based algorithms, Least squares based algorithm, Discrete Fourier Transforms, Wavelet Transforms, Kalman Filtering

Protection Schemes: Travelling Wave Protection scheme, Digital Protection of Transformers, Infinite Impulse Response Filters, Finite Impulse Response filters.

Correction of errors introduced by Instrument Transformers: PTs and CTs, detection of unsaturated fragment of wave shape, CT saturation correction procedure.

Decision making in Protective Relays: Deterministic decision making, Statistical Hypothesis testing, Decision making with multiple criteria, Adaptive decision schemes, Adaptive Differential protective scheme.

Applications: Fuzzy Logic and ANN for power system protection, Fault location algorithm, Wide Area Monitoring and Protection.
