Selection and Mode of Payment:
Selected candidates will be intimated through E-Mail. They have to remit the necessary course fee to the Bank as per the details given below.
Outstation participants requiring accommodation and boarding facilities have to pay Rs. 4,000/- in addition to the course fee.

About GIAN Course:
Ministry of Human Resource Development (MHRD), Government of India (GoI) has launched an innovative program titled “Global Initiative of Academic Networks (GIAN)” in higher Education, in order to garner the best international experience. As part of this, internationally renowned Academician and Scientists are invited to augment the Country’s academic resources, accelerate the pace of quality reforms and elevate India’s scientific and technological capacity to global excellence.

About the Institute and Warangal:
National Institute of Technology, Warangal (NITW) formerly known as REC W was the first among seventeen RECs set up in 1959. Over the years, the Institute has established itself as a premier Institution in imparting technical education of a very high standard, leading to B.Tech, M.Tech and Ph.D. programmes in various specializations of Science and Engineering streams. Warangal is known for its rich historical and cultural heritage. It is situated at a distance of 140 km from Hyderabad. Warangal is well connected by rail and road. National Institute of Technology, Warangal campus is 3 km away from Kazipet railway station and 12 km away from Warangal railway station.

About the Department:
The Department of Electrical Engineering is one of the oldest departments of the National Institute of Technology, Warangal (NITW). Established as one of the major departments of the Institute, since its inception in 1959, the Department of Electrical Engineering has been actively engaged in teaching and research in diverse fields of Electrical Engineering. With excellent faculty, the Department of Electrical Engineering offers undergraduate (B.Tech) and graduate (M.Tech) in Power Electronics & Drives and Power Systems and research (Ph.D) programmes. All B.Tech and M.Tech programs are accredited for five years in 2014-15 by NBA as per Washington Accord.

Five Days GIAN Course on
POWER CONDITIONING FOR PV SYSTEMS
January 01-05, 2018
Call for Registration and Participation

International Faculty
Prof. Jih-Sheng (Jason) Lai, Ph.D.
James S. Tucker Professor
Virginia Polytechnic Institute and State University
Director, Future Energy Electronics Center
220 Inventive Lane (0356)
Blacksburg, VA 24061

Course Coordinators
Dr. Sachin Jain
Dr. A. Kirubakaran

Today renewable energy is looked upon as a viable alternative for electric energy solution instead of conventional source of power. Ecology and environmental constraints further restricts increase power generation using oil, natural gas or coal used by conventional source. So, non-conventional sources i.e. renewable sources are becoming popular and seem to have high potential solution for the sharp increasing demand for the electrical energy.

Among renewable sources PV seems to be popular and attractive alternative. This can be attributed to requirement of abundant and free source of energy of the Sun, zero pollution, low maintenance etc. However, non-linear i-v characteristics of the PV array and dc output power from the PV source restrict its application and usage. Thus, raw power generated in the PV source needs to be conditioned into the required form for its usage. Thus, there is a need of Power Conditioning Units (PCU) which will process PV power for their usage or application.

Further, these PCUs or power converters are also necessary for dealing with non-linear i-v characteristics of the PV array. In the given lecture series various aspects of power converters will be covered. It will start with power semi-conductor devices where details of various advance devices like GaN, SiC, COOLMOS, etc. will be discussed. Selection criteria for devices for a particular application will also be covered. Apart from this course will also have details of various converters and inverters used with respect to PV systems.

The primary objective of the course is to provide participants with a wide exposure and enhancing their capability in the field of renewable energy sources, with a special focus on the following aspects:
I. Exposing participants to the fundamentals of Power Electronics in terms of selection of devices.
II. Advanced power converters and inverters used in the PV systems. Requirement of the converters and inverters processing power generated in PV source.
III. Providing exposure to PWM techniques and their analysis used during the design of power converters.

Overview of the Course:
- IV. Expose to the participants the basic analysis of PV fed converters and concepts of MPPT.
- V. Expose to simulation of power conditioners for PV system with practical demonstration.

International Faculty:
Prof. Jih-Sheng (Jason) Lai received M.S. and Ph.D. degrees in electrical engineering from the University of Tennessee, Knoxville, in 1985 and 1989. In 1989, he joined the Electric Power Research Institute (EPRI) Power Electronics Applications Center (PEAC), where he managed EPRI-sponsored power electronics research projects. From 1993, he worked with the Oak Ridge National Laboratory as the Power Electronics Lead Scientist, where he initiated a high power electronics program and developed several novel high power converters including multilevel converters and auxiliary resonant snubber based soft-switching inverters. He joined Virginia Tech in 1996. Currently he is James S. Tucker Endowed Professor and Director of Future Energy Electronics Center (FEEC). He published more than 400 refereed technical papers and 2 books. He received 24 U.S. patents in the area of high power electronics and their applications. His work brought him several distinctive awards including a Technical Achievement Award in Lockheed Martin Award Night, two Journal Prize Paper Awards, nine Best Paper Awards from IEEE and international conferences, and Virginia Tech Dean’s Award on Research Excellence. His student teams won the First Prize Award in Texas Instruments’ Analog Design Competition in 2011 and the Grand Prize Award from International Future Energy Challenge (IFEC) on power electronics design competition in 2013. Dr. Lai is an IEEE Fellow and the recipient of IEEE IAS Gerald Kliman Innovative Award. He was the founding chair of the 2001 IEEE Future Energy Challenge for Inverter Competition, General Chairs of IEEE Workshop on Computers in Power Electronics (COMPEL 2000), IEEE Applied Power Electronics Conference and Exposition (APEC 2005), 2008 NSF Workshop on Power Electronics for Alternate Energy and Distributed Generation. He also served as the Steering Committee Chair for APEC 2006 and IEEE International Future Energy Challenge in 2011 and 2013.

Who can participate?
This program is open to the Faculty, Post graduate students, Engineers and researchers from manufacturing, service and government organizations including R&D laboratories interested in developing power conditioners for alternate energy sources.

How to Register?
Stage-1: Web Portal Registration:
Visit http://www.gian.iitkgp.ac.in/GREGN/index and create login User ID and Password. Fill up the blank registration form and do web registration by paying Rs. 500/- online through Net Banking / Debit / Credit card. This provides the user with life time registration to enroll in any number of GIAN courses offered.

Stage-2: Course Registration:
Login to the GIAN portal with the user ID and Password already created in Step 1. Click on Course Registration option at the top of Registration Form. Select the Course titled “POWER CONDITIONING FOR PV SYSTEMS” from the list and click on Save option. Confirm your registration by clicking on Confirm Course.

Registration Fee:
